A special investigation of export prices and foreign market values will be made by a commission representing the Treasury Department, which has just sailed for Europe. This commission is composed of Assistant Secretary of the Treasury Reynolds and two members of the Board of General Appraisers. This commission will make a tour of the principal European capitals, at which a thorough examination will be made into questions of export and market values so far as they affect the administration of the customs laws in the United States. In the course of the investigation conferences will be held with officials of foreign governments as well as with representatives of chambers of commerce and other similar bodies, and opportunities will be afforded to those organizations for making such criticisms as they deem well founded of the administration of the American customs laws. A special effort will be made to elicit information upon the question of the tariff relations between the United States and European countries. The appointment of the commission is owing to the desire of Secretary Cortelyou to arrive at an understanding of the conditions prevailing abroad at this time, which have a bearing on the fixing of market value, and the relation thereto of export prices under the special concessions extended to Germany and other European countries. In part, the commission seems to owe its appointment to the complaints made by domestic manufacturers and other producers of the operation of the concessions referred to.

By a decided majority on a light vote, the city of Chicago has rejected the charter proposed for adoption on Tuesday last. The heaviest vote against the charter was cast in wards having a large foreign population, and it has been suggested that the vote against it was largely due to the fear that under it taxes would be raised and that strict Sunday closing laws would become effective. The charter, which consolidated the taxing bodies, gave them power to levy on property up to as high as 7 per cent. of the assessed valuation. It also provided that the city might by a referendum vote issue bonds up to 5 per cent. of the total actual valuation of taxable property in the city. It is probable that the provisions of the new charter regarding taxation, though intended to do away with a system of raising revenue believed to be inadequate, were regarded by a large majority of the voters with apprehension, and that this feeling was in the main responsible for the adverse vote.

Mexico celebrated on Monday the ninety-seventh anniversary of its independence. On that day the Congress of the republic was formally opened by President Diaz, whose seventy-seventh birthday, by the way, occurred on the preceding day. In his annual message President Diaz touched upon the relations with Guatemala, which, as he said, were at one time thought to be in danger of being disturbed. Mexico, however, he declared, had allowed the government of the neighboring republic to be the judge of its own acts. According to the figures given in the message, the revenues for the last fiscal year were greater than ever before. The import duties were double what they were five years before, and the entire budget showed a surplus of over $20,000,000, Mexican. Labor conditions, which were more or less serious at the time the last preceding message was sent to the Congress, are now improving. Health conditions are declared to be the best in the history of the country, only three cases of yellow fever having occurred in the last six months. The belief is expressed in the message that a disastrous war in Central America has been averted by the joint efforts of the United States and Mexico. The neighboring republic is to be congratulated on the situation in which it finds itself, and not least upon the fact that the veteran statesman who has so long and so ably presided over its affairs still remains in the chair of the Chief Magistrate.

A short time ago the announcement was made that a commission had been sent out by the Grand Council of China to study and make a report upon the workings of the constitutions of three important modern states, namely, Germany, Great Britain and Japan. Yesterday an imperial edict was issued authorizing two highly placed Chinese officials to frame, in cöoperation with the Grand Council, regulations for the establishment of a council of deliberation to aid the government in laying the foundations for a parliament. The issuance of this edict is believed to be due to the influence of the two viceroys who have recently been promoted to membership in the Grand Council, and whose impulse is being felt far and wide throughout the administration of China.

Final reports from seventy-two American cities to BRADSTREET'S for the month of August show a total expenditure for building in those cities during that month of $53,660,746, as against $58,309,487 expended in August a year ago, and $58,358,067 expended in July, 1907. There is here indicated a decrease of 8 per cent. from August a year ago, and the same proportion of decrease is shown from July, 1907. It might be said that forty-four out of seventy-two cities show larger expenditures in August this year than last, but the decrease in all building is explained by the fact that most of the larger cities show smaller expenditures.

MARKING TIME AT THE HAGUE.

A less confident tone seems apparent now in forecasts as to the work which is likely to be accomplished before the Peace Conference at The Hague adjourns. The difficulties which have been experienced in endeavoring to reconcile conflicting views, particularly upon the really important matters that have engaged the attention of the conference, have contributed to bring about a feeling of discouragement. No doubt a considerable proportion of the delegates feel that under present conditions they are doing little more than marking time. The existence of this feeling is indicated by the talk about the date of final adjournment, which has been a feature of the reports that have come from The Hague recently.

One of the matters in relation to which definite action seemed at one time likely, but which now must seemingly be classed among the failures of the conference, is that for the organization of a permanent court of arbitration. This plan at one time seemed to be in a fair way to receive the ultimate approval of the conference, but seems to have suffered shipwreck through the inability of the delegates to agree upon a method of allotting the judges. An earnest effort was made to reach an agreement upon this question on Wednesday, when Mr. Choate advocated the election of the fifteen judges by a direct vote of the governments, but this was defeated by a vote of 9 to 5. This untoward result was reached notwithstanding an impressive plea by the veteran advocate, in which he declared that the delegates from the United States did not go to The Hague to advance the selfish interests of their own country, but to promote the cause of justice and the general welfare of mankind, and that they were perfectly willing to take their chances in an election, even though it might result in not a single judge being chosen from the United States.

Some shreds of the original proposal were saved by the adoption of a motion by Sir Edward Fry, of Great Britain, to the effect that the conference should pass the project for the organization and procedure of the court, and remit the convention to the various governments, leaving blank the article providing for the election, with the recommendation that the governments consider among themselves how best to overcome the fundamental difficulty about the selection of the judges. This action may be regarded as disposing of the project for this time, though we notice that Baron Marschall von Bieberstein, of Germany, expresses the opinion that a permanent court can be established after the adjournment of the conference through conventions among nearly half the countries represented at The Hague. At the conference, he said, the great powers are too few to trust themselves in the hands of the small powers.

Another illustration of the difficulty found in attempting to reconcile differences was furnished by the very stormy debate had in the committee on maritime warfare on Tuesday over the proposition to regulate the employment of mines. Great Britain proposed a stringent limitation of the use of mines, while Germany antagonized any such proposition. The debate was one of the most heated that has occurred in the course of the proceedings at The Hague, and was not concluded when the committee rose. It rendered plain the impracticability of reaching an agreement when two such important nations were arrayed on opposite sides, and the contribution of the United States to the discussion, informing as it was, did little more than explain to the committee the conflicting nature of the proposal before it.

One of the most interesting incidents of the long conference, now over three months in session, was the signing in the Hall of Knights, on Wednesday, of the treaty of arbitration agreed upon between Italy and Argentina. This treaty provides that the two countries agree to submit to arbitration all the differences which may arise between them, with the exception of those affecting provisions of their constitutions or questions of nationality. In case of a dispute each country is to appoint an arbitrator, and the persons so appointed are to select a third. Should there be a failure to agree upon a third arbitrator the latter is to be appointed by the Queen of the Netherlands, but in all cases the arbitrators must be members of the Permanent Court of Arbitration at The Hague.

The treaty is to remain in force for ten years after its ratification, and in case it is not denounced six months prior to the date on which it would expire it will be deemed to have been renewed for another decade. Much has naturally been made of the signing of this document, though, of course, it is but a comparatively small outcome compared with some of the projects looking in the same direction which have not had so happy an issue. The present temper of the conference may be characterized as one of restlessness, the bulk of the delegates seeming to be waiting only for the signal to disperse. It is, of course, possible that something striking may be done by the conference in its closing hours; expectation does not, however, look in that direction, and interest in the proceedings seems likely to lag during the remaining weeks of the session until possibly the very eve of adjournment.

RAILWAY GROSS AND NET EARNINGS.

There is no denying that railway gross earnings are of very heavy volume, which indicates that business, as measured by traffic movements, is of excellent proportions. Thus the latest complete returns, those for July, show that gross revenues advanced 15.2 per cent. over the figures of the corresponding month in 1906, but, on the other hand, net receipts increased only 6.2 per cent. In other words, while the actual gain in gross earnings amounted to $13,974,004 on a total of $105,441,674, the gain in net revenue aggregated only $1,843,432 on a total of $31,163,537, the expansion in operating expenses being sufficient to absorb all but a comparatively small proportion of the increase in gross earnings. In fact, operating expenses in July this year were nearly 20 per cent. in excess of what they were in the like month of 1906. It is difficult to say just what proportion of the increase in that item can be charged to the Interstate Commerce Commission's new rules respecting renewal and depreciation accounts, but it is probable that the new order of accounting has played some part in enlarging the charge coming under the head of operating expenses; and in this connection we may mention that the new regulations have probably delayed the publication of many reports, and therefore our report on this occasion is not so comprehensive as it usually is. In any event, the facts as regards gross and net earnings as well as operating expenses are set forth in the following few lines:

	1907	1906	*Inc., p. ct.*
Gross earnings	$105,441,674	$91,467,670	15.2
Operating expenses	74,278,134	62,145,565	19.5
Net earnings	31,163,537	29,322,105	6.2

While some of the groups are not so representative as in preceding months, we think the general tendency of gross earnings throughout the country in July is pretty well indicated in the following:

	1907	1906	*Inc., p. ct.*
Northwestern	$8,355,504	$7,124,386	17.2
Central western	9,497,974	8,867,933	7.1
Trunk lines	28,564,956	24,961,838	14.4
Eastern	2,406,286	2,178,406	10.4
Anthracite coal	8,320,109	7,178,689	15.9
Southern	20,708,681	18,530,687	10.4
Southwestern	19,842,523	16,094,250	23.3
Pacific	7,745,641	6,531,481	18.5
Total	105,441,674	91,467,670	15.2

Increases, it will be observed, are the rule, the gains ranging from 23.3 per cent. in the case of the southwestern roads down to 7.1 per cent. reported by the central western division.

Results in July as regards net receipts are reported in the following table:

	1907	1906	*Inc., per ct.*
Northwestern	$2,241,451	$2,379,711	5.8
Central western	2,601,348	2,601,449	*.003
Trunk lines	8,365,753	7,895,895	5.9
Eastern	775,543	750,786	3.0
Anthracite coal	3,278,359	2,903,636	12.9
Southern	4,903,401	4,704,822	4.0
Southwestern	6,375,384	5,600,108	13.8
Pacific	2,622,298	2,486,208	5.4
Total	31,163,537	29,322,105	6.2

* Decrease.

The southwestern roads show a large increase—13.8 per cent.—while the hard-coal roads are not far behind with a gain of 12.9 per cent. The other advances are of moderate proportions, the trunk lines reporting 5.9 per cent., the Pacific 5.4 per cent., the southern 4 per cent., and the eastern only 3 per cent. The northwestern group displays a loss of 5.8 per cent., and the central western divison shows a loss of .003 per cent.

The swings in gross and net earnings for nineteen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7.7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
July	15.2	6.2
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

The following list gives the increases in net earnings as compared with July, 1906:

Pennsylvania, west of Pittsburgh and Erie	$437,100
Reading	322,389
Pennsylvania, east of Pittsburgh and Erie	281,500
Missouri, Kansas & Texas	257,357
Norfolk & Western	232,331
Denver & Rio Grande	224,640
Canada Northern	156,000
Canadian Pacific	135,042
Chesapeake & Ohio	133,706
Atchison, Topeka & Santa Fe	125,670
Baltimore & Ohio	107,729

A number of roads report decreases in net earnings, but these are the most significant losses, the comparison being with July last year:

Rock Island	$178,788
Atlantic Coast Line	136,399
Minneapolis, St. Paul & Sault Ste. Marie	132,792
Southern	130,641
Yazoo & Mississippi Valley	†12,130

† Deficit.

In conclusion, it may not be amiss to say that the future course of net earnings will be watched with interest, especially as it looks as though forthcoming reports on gross receipts should show smaller ratios of increase.

CURTAILING COPPER PRODUCTION.

In addition to the cut to 18 cents per pound made early last week in the price of copper by the United Metals Selling Company and the other large producers and agents, last Saturday brought with it a further reduction to 16½ cents per pound, another cut to 16 cents being announced on Thursday. It is not pretended, however, that the further lowering of the quotation has brought any marked accession of buying. On the contrary, consumers seem able to fill their orders from stocks on hand, or have bought small parcels of the metal in the market at around 15 cents per pound, the less prominent producers being content with that price, while at the Metal Exchange the quotations have shown an additional decline, with bids at from 14⅞ cents for low grades to 15 cents for standard brands, future deliveries bringing relatively lower prices. The situation, in fact, is generally believed to indicate additional concessions, and a great deal of talk has been heard about the probability that, in view of the shrinkage in the demand for manufactured products, the market for raw copper will not find its equilibrium until lower prices are reached.

One of the most important developments of the week was the announcement that formal action had been taken by the managements of the various subsidiary companies of the Amalgamated Copper Company to forthwith curtail the output of their mines. These companies comprise the Anaconda, Boston & Montana, Butte & Boston, Parrot, Washoe and Trenton companies, whose production is approximately 270,000,000 pounds of copper per annum. It is stated that these organizations will at once reduce their working forces and limit their output to about one-half its present volume, while it is further stated that should it be necessary to do so, still more drastic curtailment of the output will be resorted to. This action, it is semi-officially reported, was necessitated by the fact that there has now accumulated a heavy surplus stock of unsold copper, the size of which is variously stated, and it is thought that by restricting the output the marketing of the surplus can be effected without causing an additional violent break in copper prices. It is also intimated that the larger independent companies are considering the advisability of following the Amalgamated's example, and it is furthermore stated that in many cases mining interests in the west find it advisable to do so on account of the scarcity of labor and the inadequacy of the present railroad facilities, there being, in particular, an insufficiency of fuel at various mining camps.

The additional reduction in nominal quotations for the metal and the cutting down of the output by the Amalgamated would seem to be merely formal acknowledgments by that interest of the existence of conditions in the copper trade which have been fully apparent for some time past. So far as the effect upon the

securities market is concerned, it must be admitted that it has been rather favorably received, although in that quarter there is practically no dissent from the opinion that a reduction in the dividend rate paid upon Amalgamated Copper, now 8 per cent. per annum, as well as in those on Anaconda and the other stocks of subsidiary corporations, is made inevitable. It may be pointed out, however, that the great decline which has occurred in Amalgamated shares in the stock market has largely discounted both the condition in the metal market and the prospective reduction or passing of dividends, which seem likely to be natural sequences.

THE NATIONAL BANK RETURNS.

The abstracts of the August 22 return of all the national banks of the country, made to the Comptroller of the Currency, were made public this week, and following are the detailed items of the return, compared with the last previous statement (that of May 20, 1907), and with that of September 4 last year:

RESOURCES.

	Aug. 22, '07	*May* 20, '07	*Sept.* 4, '06
Loans and discounts	$4,678,583,968	$4,631,143,692	$4,298,983,316
Overdrafts	30,443,119	32,870,472	32,475,196
United States bonds to secure circulation	557,277,950	554,029,150	524,036,980
United States bonds to secure United States deposits	95,628,650	95,821,850	97,171,580
Other bonds to secure United States deposits	68,198,039	95,418,233	12,678,858
United States bonds on hand	7,390,840	6,924,030	7,588,150
Premiums on United States bonds	14,554,194	14,408,969	13,636,618
Bonds, securities, etc.	700,352,456	679,016,228	674,923,278
Banking house, furniture, etc.	160,845,896	157,395,558	144,265,009
Other real estate	20,241,913	19,878,069	19,713,379
Due from national banks	334,571,435	365,487,886	332,294,554
Due from state banks	123,020,454	136,156,215	125,354,036
Due from reserve agents	614,496,352	628,784,066	616,147,683
Cash items	26,905,246	32,497,413	36,449,171
Exchanges for Clearing House	190,602,163	273,101,070	395,340,487
Bills of other national banks	31,240,127	28,100,425	28,361,469
Fractional currency	2,314,530	2,203,246	1,992,147
Specie	531,107,750	530,713,909	464,437,291
Legal-tender notes	170,515,782	160,877,239	161,575,120
Redemption fund	27,305,679	27,096,575	25,527,089
Due from United States Treasurer	47,731,853	4,577,140	3,067,654
Total resources	8,390,328,402	8,476,501,435	8,016,021,066

LIABILITIES.

Capital stock	$896,451,314	$883,690,917	$835,066,796
Surplus fund	548,303,602	534,794,629	490,245,124
Undivided profits	186,554,151	185,618,410	180,569,857
National bank notes outstanding	551,949,461	547,918,696	517,964,511
State bank notes	30,419	30,423	30,966
Due to other national banks	823,680,087	875,767,698	830,119,644
Due state banks and bankers	395,745,494	397,038,415	381,553,534
Due trust companies and savings banks	337,927,872	372,404,269	346,514,195
Due reserve agents	38,139,918	40,329,666	30,814,088
Dividends unpaid	1,083,606	1,276,540	1,005,759
Individual deposits	4,319,035,402	4,322,880,141	4,199,938,310
United States deposits	143,282,393	170,062,674	96,775,895
Deposits of United States disbursing officers	17,755,770	10,625,535	11,055,919
Bonds borrowed	59,994,634	83,338,008	34,975,939
Notes and bills rediscounted	14,415,550	9,074,723	11,506,311
Bills payable	44,760,529	30,054,968	37,336,401
Reserved for taxes	4,358,763	3,618,369	3,574,674
Other liabilities	6,859,429	7,967,353	6,973,142
Total liabilities	8,390,328,402	8,476,501,435	8,016,021,066
Percentage of legal reserve	21.36	21.22	20.70
Percentage of all reserve	25.56	25.79	25.72

One of the features brought out in this report is the expansion shown in the item of loans and discounts as compared with May 20 this year and September 4 a year ago. Compared with May 20, it is found that loans have increased $47,440,277, while individual deposits decreased $3,844,738. Compared with September 4, 1906, the item of loans increased $379,600,652, while individual deposits gained $119,097,092. This large increase in loans is generally attributed to the transference of loans formerly placed abroad to home banks, but it is to be suggested that some part of the numerous note issues by railroads may figure in the loan item of the banks. Until further details by sections of country are available, it will be impossible to state definitely where this expansion has occurred, but the general conclusion is that the New York banks have not been foremost in this respect, and that the expansion has been relatively greater in the west and other parts of the country.

Changes occurring in important items, compared with the last return, that of May 20, were as follows:

	Increase
Loans and discounts	$47,440,277
Specie	393,841
Legal tenders	9,638,543
Total cash	10,032,384
Due other national banks	*52,087,611
Due state banks and bankers	14,484,881
Due trust companies and savings banks	25,890,074
Individual deposits	*3,844,738

Compared with a year ago (September 4, 1906), the same items show the following changes:

	Increase
Loans and discounts	$379,600,652
Specie	68,670,459
Legal tenders	8,940,622
Total cash	77,611,081
Due other national banks	*6,439,557
Due state banks and bankers	14,191,860
Due trust companies and savings banks	*8,586,323
Individual deposits	119,097,092

* Decrease.

A classification of the cash reserves held by the banks, compared with three months and a year ago, is as follows:

	Aug. 22, '07	*May* 20, '07	*Sept.* 4, '06
Gold coin	$125,114,858	$123,013,697	$120,765,996
Gold Treasury certificates	169,034,270	189,009,420	147,408,760
Gold Treasury certificates payable	41,045,000	48,225,000	29,850,000
Gold Clearing House certificates	69,605,500	62,988,000	66,515,550
Silver dollars	12,797,869	12,298,117	11,693,445
Silver Treasury certificates	99,668,414	82,382,636	77,142,042
Silver fractional coin	13,841,838	12,797,039	11,761,547
Total specie	531,107,750	530,713,909	464,437,291
Legal tenders	170,515,780	160,877,239	161,575,120
Total cash	701,623,532	691,591,148	626,012,411

The three most important items in this showing compare as follows with the September statement for a series of years:

	Loans	*Indiv. deposits*	*Cash*
1907	$4,678,583,968	$4,319,035,402	$701,623,532
1906	4,298,983,316	4,199,938,310	626,012,411
1905	3,998,509,153	3,820,681,713	665,553,300
1904	3,726,151,419	3,458,216,668	661,556,530
1903	3,481,446,772	3,156,333,499	554,306,027
1902	3,280,127,480	3,209,273,894	507,933,738
1901	3,018,615,918	2,937,753,233	539,555,622
1900	2,686,759,642	2,508,248,557	520,459,904
1899	2,496,751,251	2,450,725,595	466,326,035
1898	2,155,961,628	2,031,454,540	420,722,458
1897	2,051,009,438	1,853,349,129	388,882,631
1896	1,870,591,716	1,597,891,059	343,143,362
1895	2,041,846,233	1,701,653,521	340,103,996
1894	1,991,874,273	1,728,418,819	402,804,682
1893	1,830,667,349	1,451,124,331	346,433,212

There is here shown a gain in loans of 8.8 per cent. as compared with a year ago, while the gain in individual deposits is only 2.8 per cent., and the gain in cash is 5.5 per cent. Of this increase in cash the specie holdings are shown to have gained by over 14 per cent. The percentage of legal reserve is shown to have been 21.36 on August 22, 1907, as against 20.70 per cent. on September 4, 1906, and the percentage of all reserve is 25.56 at the date of the last statement, as against 25.72 per cent. at about the same date last year.

THE COTTON CROP OF 1906-07.

Despite a remarkable and widespread lowering of grade, due to autumnal storms, which, while impairing the fiber and color of a large part of the crop, undoubtedly reduced the total outturn from what might have been a record yield, the cotton crop of the year 1906-07 is estimated by Col. Henry G. Hester, of the New Orleans Cotton Exchange, to have netted $716,352,265 to the country, a sum larger by $75,000,000 than was ever before realized. That authority, as already noted, placed the crop of the season closing on September 1, 1907, at 13,510,982 bales, an increase of 2,164,994 bales over that of 1905-06, and a decrease of only 54,903 bales from the record crop of 1904-05. Just how the crops of recent years compare in yield and value is shown in the following table:

	Bales	*Values*
1906-07	13,510,982	$716,352,265
1905-06	11,345,988	641,720,435
1904-05	13,565,885	628,195,359
1903-04	10,011,374	617,501,548
1902-03	10,727,559	480,770,282
1901-02	10,680,680	438,014,689

The highest price realized in the cotton belt for the crop was 13 9-16 cents, on August 27, 1907; the lowest was 9⅛ cents, on September 5, 1906, and the average, basis middling upland, was 10 9-16 cents. Inasmuch, however, as the average grade of the crop was reduced by the storms above alluded to, the average price of the crop actually sold is placed at 10.29 cents per pound. The average of the bale was, therefore, $53.02, as against $56.56 the year before, $46.31 in 1904-05 and $61.68 in 1903-04.

The trouble as to grade had some other effects which were not expected, and which caused serious trouble in the trade, and are referred to by Colonel Hester as follows:

> A marked result of these conditions has been an almost universal upheaval of the contract business, which has become the mainstay in the disposal of the cotton crop. That, almost as a rule, deliveries have not been on a par with the usual standard, has not been by reason of deliberate intent, but because the kinds of cotton reasonably expected in settlement of contracts could not be obtained. As a consequence, both deliverers and receivers have been dissatisfied, the former because they could not satisfactorily carry out their obligations, and the latter because they did not obtain what they considered they were justly entitled to receive. These abnormal conditions have brought with them many charges of unfairness, which have caused the legitimate contract business to be linked with bucket-shop gambling in the opinions of legislators of nearly every state in the cotton belt. The results have been the enactment of restrictive laws affecting alike the legal and illegal. Similar conditions have never before been known, and it is not unlikely that another and succeeding years will witness a revulsion of sentiment in the cotton-growing states encouraging features beneficial and necessary to the economical movement of the crop, while eliminating gambling or bucket-shopping, which has brought in its train disaster and consequent misconception.

The following estimate of the division of the commercial crop of cotton by states will be found of interest:

[Three figures omitted.]

	1906-07	1905-06	1904-05	1903-04
Alabama	1,289	1,389	1,470	1,000
Arkansas	940	635	905	705
Florida	65	80	89	55
Georgia	1,695	1,900	1,975	1,325
Louisiana	995	525	1,100	824
Mississippi	1,541	1,235	1,777	1,387
North Carolina, etc.	663	734	775	563
South Carolina	957	1,175	1,200	825
Tennessee, etc.	863	647	691	451
Texas and Indian Territory	4,503	3,026	3,584	2,876
Total crop, bales	13,511	11,346	13,566	10,011

As already frequently noted, the cotton-manufacturing industry was active as never before in 1906-07. The only drawback was the scarcity of help, this being more noticeable than ever at the south, where the trouble was not one of actually fewer people offering to work, but simply because more mills and spindles were in operation than ever before. Thus the number of southern spindles in operation is reported to have increased by 791,965, while there were 640,978 spindles additional in mills not completed. The distribution of the crop in 1906-07 compares with the preceding two years as follows:

	Bales, 1906-07	*Bales,* 1905-06	*Bales,* 1904-05
Port receipts	9,919,555	8,029,544	10,319,782
Overland to mills	1,252,216	1,008,463	1,128,183
Southern consumption	2,439,108	2,374,225	2,163,505
Total	13,610,879	11,412,232	13,611,470
Taken by southern mills from ports	99,897	66,244	45,585
Total crops	13,510,982	11,345,988	13,565,885
Exports—			
Great Britain	3,771,902	2,883,748	4,140,474
France	907,162	776,057	857,738
Continent and Channel *	3,682,746	2,932,818	3,747,104
Canada	148,630	139,585	131,582
Total exports	8,510,440	6,732,208	8,876,898
Stock at close of year	268,678	196,797	319,405
Northern mill takings	2,526,390	2,349,478	2,282,145
Average gross weight of crop per bale, pounds	515.02	510.91	515.58

* Includes Mexico, Japan and China.

The world's visible and invisible supply of American cotton at the close of August this year is estimated at 2,845,000 bales, as against 2,054,000 bales at the same date in 1906 and 2,912,000 bales in 1905. The visible and invisible supply of all kinds of cotton at the close of August is given at 4,251,000 bales, as against 3,174,000 bales a year ago and 3,968,000 bales in 1905. The supply of both is also a little more than double what it was in 1904. The world's consumption of American cotton in the past year is placed at 12,698,000 bales, as against 12,166,000 bales in the preceding year and 11,838,000 bales in 1904-05.

THE NEW RAILROAD ACCOUNTING PLAN.

A subject which is being much discussed in railroad circles, and which has also attracted more or less attention in the securities market, is the new regulation for the statement of railway companies' accounts. The new system, formulated by the Interstate Commerce Commission, which went into force on July 1, involves many changes from the methods of setting forth income and expenditures that have heretofore been in use. One of its principal results will be the practical uniformity in the way all the roads subject to the commission's jurisdiction present their figures. At the same time it will render it difficult to juggle accounts or put forth the confusing kind of statements which aim at concealing rather than presenting important facts, such as certain railway managements have been accused of making from time to time. This, it is claimed, will of itself be of inestimable benefit to the investing public, and will tend powerfully to give it accurate and reliable knowledge of the true financial position of the companies. Many of the changes involved relate to technical points in accounting, but in the requirements for a strict separation of operating expenses proper and those which are really for construction purposes, in the more accurate division of earnings derived from operations and those from other sources, and in the requirements for liberal allowances for depreciation of property and equipment, or those which have reference to the charges growing out of the borrowing or lending of rolling stock, to name no other features, the regulations seem designed to thoroughly systematize railroad accounting in this country.

In framing the new system the commission and its statistical bureau consulted the officials who have charge of such matters for many of the leading roads. It would seem, however, that railroad managements, in many cases, are disposed to

criticise the plan adopted and its results. In fact, it was reported that some of the prominent companies were disposed to appeal to the commission for a revision of its decision in the matter in the interest of simplifying the regulations or postponing their enforcement for a time. No heed, however, was paid to such suggestions, and the companies are now under the necessity of complying with the commission's orders. This, it is claimed, is already resulting in a certain amount of complication, points having arisen on which there are differences of opinion among railroad accountants as to how the new regulations are to be interpreted. This has resulted in a delay in making public the monthly statements of earnings which a large proportion of the roads give out. It is also pointed out that the changes are so great that statements issued in compliance with the new system do not afford material for a fair comparison with the figures of last year, made up under the old methods. In fact, certain companies have judged it advisable to issue two monthly statements, one presenting results as ascertained by the old, the other by the new standard. It is, furthermore, urged that the effect on the whole will be to make the showings, both monthly and yearly, much less favorable than they would be if presented in the old form, and thus produce an adverse impression in the minds of investors in railroad securities. A rather striking instance of the way in which the statements are affected is afforded by that of the Rock Island-Frisco system for July, which only made its appearance this week. With an increase for the month of $1,528,793 in the gross earnings, there is a loss of $219,712 in the net. This, it is true, is in part the result of higher wages and materials of all kinds, but the wholesale charging off to depreciation, renewals and replacements, which is required by the new rules, is considered to be mainly responsible. It is such features of the matter which naturally receive the greatest attention on the part of the financial world, and it is not at all improbable that they will have an influence of considerable importance in that quarter. Moreover, it is urged that there are various defects in the details which require amendment. Allowing for all this, it is, however, to be kept in mind that the new method of accounting is a step in the proper direction as regards uniformity and a strict classification, which are highly desirable in this important matter.

THE NEW CONSULAR SERVICE.

The United States has had and has in its consular service alert, able and well-informed men, but it is the general conviction that under conditions different from those which have prevailed in the past, more of the desirable class of appointees would secure places. It is upon this conviction that the recent legislation of Congress has proceeded, and that the State Department and the Civil Service Commission have acted in framing the regulations under which future appointees are to be chosen. It is not necessary to cast any reflections upon former systems of appointment in chronicling the fact that the government is now making a decided effort to secure the services of men whose special fitness for their places will be demonstrated along certain lines at least by public tests.

At a recent examination conducted at the State Department, applicants were required to qualify in French, German or Spanish, on the natural, industrial and commercial resources of the United States, in political economy, international maritime and commercial law, civil government, commercial geography, and the history of Europe, South America and the Far East since 1850. It will be seen from the ground covered in this examination that the applicant for the position of consul to-day must be a man fairly well versed in the special knowledge appropriate to his position, and that the consul of the future must, from the necessity of the case and apart from individual ability or acquirement, be a well-informed man along the lines of his daily duties.

The recent examination was conducted under the personal supervision of the chief examiner of the Civil Service Commission in Washington. The percentage required for passing was high—80 per cent.—ten points higher than the standard required of most applicants for government positions in competitive examinations. It is important that the standard for such officials should be set high, and that that standard should be maintained. The consuls are the commercial agents of the government abroad. They should be proud to regard themselves as being members of a secondary branch of the diplomatic service of the government. Under the conditions of the times they must be important members of the government service. It is a part of their duty to give information as to new markets for their country's products, and to disseminate abroad information as to products of their own country which may find a market within their jurisdiction. This function is a most important one at a time when the wars and the diplomacy of the world are, in the main, concerned with markets. It is no longer dynastic concerns that give employment to the chiefs of cabinets. The commercial and the industrial interests of the great peoples have come to play a foremost part in the everyday history of the world, and those who by training are fitted to take their share of the work and discharge it with credit have their rôle cut out for them in the future.

EDITORIAL NOTES.

Among the railroads which have published their annual reports for the twelve months ending July 30 is the Missouri, Kansas & Texas, the showing of which is remarkable, in the respect that it exhibits a remarkably large increase in net earnings, the gain in this item being, in fact, proportionately very much greater than in the gross. Following is the statement referred to:

	1907	1906	1905	1904
Gross	$26,183,958	$21,159,145	$20,041,095	$17,766,595
Exp. and taxes	17,675,450	15,414,545	14,937,720	12,997,710
Net	8,508,508	5,744,600	5,103,375	4,768,885
Other income	177,140	409,035	425,181	316,723
Total income	8,685,649	6,153,635	5,528,556	5,085,608
Charges	5,003,338	4,500,547	4,261,365	4,019,240
Surplus	3,682,311	1,653,088	1,267,191	1,066,368
Preferred div.	520,000	260,000	....	....
Surplus	3,162,311	1,393,088	1,267,191	1,066,368

The aggregate of the 1907 gross earnings is $26,183,958, against $21,159,145 the year before, being a gain equivalent to 23.7 per cent. The operating expenses for the year, which were $17,675,450, represent, however, an increase of only 14.6 per cent., while the net, which was $8,508,508, compares with only $5,744,600 in the previous year, the gain being equivalent to no less than 48 per cent. The Missouri, Kansas & Texas, in fact, is one of the few roads reporting any great increase in net earnings during the fiscal year 1906-07. This is due in large part to the fact that the southwestern roads as a class were probably the most prosperous of any group in the country, and also to the fact that the operating expenses were proportionately smaller in the case of this road, having absorbed in the fiscal year under consideration only 67.5 per cent. of the gross receipts, against about 73 per cent. thereof in the preceding year. In this respect the figures seem to reflect a decided improvement in the physical condition of the property, which formerly was in admittedly poor condition. In fact, the outcome in this case furnishes full justification for the large expenditures which have been made upon the property in the last couple of years. After deducting fixed charges, which latter item showed an increase of around $500,000, there was a surplus of $3,682,311, which was a gain of $2,029,223, or no less than 122 per cent., and after paying 4 per cent. on the preferred stock there was a further balance of $3,162,311, equal to nearly 5 per cent. on the $63,300,000 of common stock. The report contains a very strong presentment by its management of the situation which now exists in regard to railroads generally, pointing out that it, like other companies, finds itself without facilities adequate to handle all the traffic that is offered.

Much interesting information has already been made public by the investigation of the Standard Oil Company, which was commenced in New York this week. The proceedings are, of course, only in their initial stage, and it is impossible to form any idea as to the outcome of the government's effort to suppress the alleged monopoly. The following statistics of capital stock, net assets, gross assets, total profits and dividends of the Standard Oil Company of New Jersey and of securities of other companies held by the Standard Oil Company were produced by officials of the company, and have been widely commented upon:

	Capital stock	*Net value of assets*
1899	$96,998,612	$196,220,017
1900	97,448,743	205,480,449
1901	97,448,923	210,997,006
1902	97,448,923	231,758,405
1903	97,448,923	270,217,921
1904	98,338,382	297,489,225
1905	98,338,382	315,613,261
1906	98,338,382	359,400,193

	Gross assets	*Total profits*	*Dividends paid*
1899	$200,791,623	$34,420,314	$14,304,18
1900	209,140,331	55,501,774	46,691,474
1901	214,764,956	52,291,767	46,775,390
1902	235,445,822	64,613,365	43,851,966
1903	275,949,784	81,336,994	42,877,478
1904	303,167,225	61,570,110	35,188,266
1905	337,198,105	57,459,356	39,335,320
1906	371,664,531	83,122,251	39,335,320
Total	....	490,315,934	308,359,403

Whatever uncertainty existed in the mind of the Wall street public as to the possibility that the New York Central Railroad Company might not maintain its dividends at the rate of 6 per cent. per annum, was set at rest on last Wednesday. The directors on that day declared the customary 1½ per cent. for the quarter ending September 30, although no statement was given out as to the earnings for that period. It will be recalled that although the company earned in the June quarter about $50,000 above its regular dividend requirements, the results for the first six months of 1907 showed a failure to earn the full dividends for that period to the amount of no less than $2,400,000. In fact, it is suggested that in order to keep up the dividend rate the controlled and leased lines of the system have been made to contribute, while it is also held that a curtailment of the extraordinarily high operating expenses which the New York Central has shown of late may have been resorted to. There is an impression that powerful banking interests connected with the company advocated the maintenance of the dividend with a view to its bearings upon the attitude of the investing public, which would have certainly been adversely affected had a company of such importance given such a striking evidence of the poor conditions which confront the railways. An interesting statement has been given out to the effect that since January 1 the number of the New York Central's stockholders has practically doubled, there being at present over 15,000 individual owners of shares registered on the books, which fact would indicate that investors were not slow to take advantage of the exceptionally low price at which its stock has sold during the past nine months.

The Agricultural Department, in addition to reporting upon the condition of the leading crops on September 1, has also compiled the condition figures of other crops, some of which reach or interest the ordinary person in a way that the larger crops do not. Thus there are reports upon the leading vegetables and fruits, which, while not classed as important crops, are, after all, widely consumed and necessary to the well-being of the average citizen in a way not fully appreciated. The following table, compiled by the crop reporter, gives the approximate condition on September 1, 1907, of the crops specified, with comparisons for August 1, 1907, and September 1, 1906:

	Sept. 1, 1907	*Aug. 1, 1907*	*Sept. 1, 1906*
Alfalfa	92	90	92
Apples	35	39	70
Beans	83	89	87
Broom corn	83	86	86
Cabbage	85	90	86
Clover for seed	77	..	78
Cranberries	78	..	80
Flax	85	92	89
Grapes	82	84	84
Hemp	86	88	91
Hops	88	89	93
Kaffir corn	83	85	92
Millet	84	88	88
Onions	88	92	88
Peaches	30	33	64
Peanuts	86	85	85
Rice	87	89	87
Sorghum	82	83	90
Sugar beets	92	92	97
Sugar cane	94	92	84
Sweet potatoes	86	86	89
Tomatoes	83	86	82
Watermelons	76	78	82

Examination of this table shows that only three of the above-mentioned twenty-three crops were in a better condition on September 1 this year than last, these being peanuts, cane sugar and tomatoes. Three more—alfalfa, onions and rice—are equal to a year ago, and seventeen are lower. An especially poor showing is made by apples and peaches. As to the first, a yield only about half of last year's is indicated, that crop having fallen off materially in condition during August in the leading eastern states. Taking the condition figures of all crops on September 1 this year, as compared with last, there seems to be little to deduce that might be called satisfactory.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Interstate Commerce—State Regulation.

The Supreme Court of Appeals of West Virginia held, in the case of Jennings vs. Big Sandy & Cumberland Railroad Company, that a contract between a shipper and a railroad company for the carrying of goods from a point within one state to a point in another state is interstate commerce, and is not the subject of state regulation as to tolls or compensation therefor.

Carrier—Goods—Damage—Negligence.

The Supreme Court of Minnesota held, in the case of Brennison et al. vs. Pennsylvania Railroad Company, that when perishable goods are delivered to a common carrier for transportation in a sound and merchantable condition and delivered to the consignee in a damaged state, the burden is upon the carrier to prove that the damage was not occasioned by its negligence.

Negligence—Railroad—Custom.

The Supreme Court of Minnesota held, in the case of Floan vs. Chicago, Milwaukee & St. Paul Railway Company, that a custom of a railroad company to warn employees engaged upon its yard tracks of the approach of switch engines by ringing the bell or sounding the whistle thereof relieves such employees in a large measure from the strict rule of self-protection, and that within that rule the question of the plaintiff's contributory negligence was properly submitted to the jury.

Real Estate—Rents—Death.

The Kentucky Court of Appeals held, in the case of Eastwood vs. Sisk, that rents which accrue before the death of the owner of real estate vest at the owner's death in his personal representative, but that rents which become due after the owner's death must be apportioned among those who would be entitled to take the real estate itself at the death of the owner, and in the same proportion as provided by section 3865 of the Kentucky Statutes.

Interstate—Railroad—Attachment.

The Supreme Court of South Carolina held, in the case of Shore et al. vs. Baltimore & Ohio Railroad Company, that where a car owned by a foreign railroad and loaded with interstate freight to be unloaded at its destination within the state, and again loaded with interstate freight and returned in the course of interstate commerce, arrives in the state, it cannot be attached at its destination before being unloaded in a suit by a resident against the foreign railroad company, it being engaged in interstate commerce.

Mortgage—Mechanics' Liens—Priority.

The Kentucky Court of Appeals held, in the case of Scheas vs. Boston et al., that in determining the question of priority of liens between a mortgagee whose mortgage was shown to have been duly recorded in the proper office, and those of a laborer and material man who had performed labor and furnished materials in the construction of the property, it was not incumbent on the mortgagee to furnish proof that he did not have actual notice of their liens, but that the burden of proof was on the material man and not on the mortgagee.

Injunction—Public Bulletin—Manufacturer

The Supreme Court of Michigan held, in the case of The Pratt Food Company vs. Bird, that although equity will not restrain a public officer from invoking the criminal law, and will not transfer a criminal case to its own jurisdiction, and generally will not restrain libel, it will restrain a state officer from unlawfully placing in the hands of every stock-food dealer in the state a bulletin in effect threatening him with prosecution if he should use a manufacturer's product sold in lawful form. The court said: "If the acts which are threatened are unlawful, it cannot be doubted that placing in the hands of every dealer in the state a bulletin which in effect threatens them with prosecution in case they make use of these products, in which they are lawfully sold to them, would be to absolutely exclude complainant's business from the state."

Constitutional Law—Payment—Tickets.

The Texas Court of Criminal Appeals held, in the case of Jordan vs. The State, that the statute of that state (section 1, acts of 29th Leg., chapter 152) making it unlawful for any person, firm, association of persons, corporation, or agent of either, to issue any ticket, check or writing obligatory to any servant or employee for labor performed, redeemable or payable in goods or merchandise, and (section 2) providing a punishment for violation of the act, interfered with the right of contract and contravened section 19 of article 1 of the Constitution of Texas, providing that no citizen shall be deprived of life, liberty, property, privileges or immunities, etc., except by due course of law, and violated also the provisions of the Federal Constitution. The court said: "Viewing the matter as we do, and in the light of the authorities, the principle of our constitutional provisions, the principles of equal rights and freedom of contract, we cannot agree that this act of the legislature is constitutional."

Insurance—Agent—Negligence.

In the case of Emory vs. Lord, decided by the Court of Appeals of the District of Columbia, it appeared that the appellee obtained through the appellant two policies of insurance upon her property in Maryland. On her removal to Washington she also obtained through him vacancy permits for two months, as required by the policies, which permits were renewed so as to expire at noon on January 15, 1906. In the afternoon of that day the appellee's son paid to the appellant the premium required for renewing the permits for another period of two months, which payment, if made on that day to the agent of the insurer, would have renewed the permits for such period. The appellant failed to pay the premium to the agent, the permits were not renewed, and on the next day the property was destroyed by fire. The insurer denied liability, but a compromise was effected, and the appellee claimed the difference between the amount received and the face of the policies from the appellant. The court held that the trial court did not err in refusing to take the case from the jury, and it affirmed a judgment for the plaintiff.

Agent—Authority—Price—Rebate.

The Supreme Court of South Dakota held, in the case of Tollerton & Warfield Company vs. Gilruth, that a traveling salesman empowered to take orders for merchandise at a price consistent with current quotations prescribed by his employer cannot bind the latter by a written rebate agreement signed in his own name in the absence of special authority. It appeared in the case before the court that a traveling salesman empowered to take orders for merchandise took an order under the circumstances mentioned above and signed an agreement for a rebate in his individual capacity. The court held that under section 1680 of the Revised Civil Code of South Dakota, providing that an authority expressed in general terms does not authorize an agent to act in his own name, the buyer was put on inquiry as to the extent of the authority of the agent to contract for a rebate, and that the buyer could not hold the employer thereon in the absence of authority to make it. The court said that any other construction of such a transaction would materially hamper, if not virtually destroy, the effectiveness of the customary means of transacting wholesale mercantile business with retail customers.

Railroad—Platform—Negligence.

In the case of The Capital Traction Company vs. Brown, recently decided by the Court of Appeals of the District of Columbia, it appeared that the appellee was thrown from a car of the appellant company as it rounded a curve. When the appellee boarded the car there was ample standing room inside the car, but he remained on the platform. A notice reading, "It is dangerous to ride on the platform," was posted on the car. There was evidence tending to show that the car in rounding the curve was moving at a rate of speed greatly in excess of that prescribed by the local police regulations. The trial court refused to charge the jury that the act of the appellee was negligence per se, and submitted to the jury the question whether he was guilty of such contributory negligence as to bar his right of recovery. The Court of Appeals affirmed a judgment for the appellee, holding that even though a notice prohibiting passengers from riding upon the platform was posted, it would not be negligence for a passenger to do so if the railroad company ignored its own notice and thereby established a custom inconsistent therewith, and that while it is probably more dangerous to ride upon the platform than within the car, and a passenger by doing so assumes the risks that naturally ensue, yet if he has exercised due care—which is usually a question for the jury—and is injured by the negligence of the company in running the car, the company cannot be heard to say he has no right of action when it is responsible for the practice which resulted in the injury.

BUSINESS NOTES.

Improvements at St. John, Canada.

It is reported that St. John, the Canadian winter port, is entering on a stage of development the most important in its history, and the outcome of which will doubtless materially affect the volume of Canadian business now passing through Portland and other American seaports during the winter months. For the last eighteen months the city has been going ahead with the construction of new wharves, looking to the adoption of a policy of nationalization by which the harbor works will be purchased and maintained by the federal government. The city has undertaken to build four new deep-water wharves for the accommodation of the largest liners. One of these wharves is almost completed, another is in course of construction, and dredging contracts have been awarded and work begun for the other two. When it is considered that the winter traffic in St. John has increased in ten years from nothing to $23,000,000, and that there have been so few berths that vessels could not at all times find accommodation, the importance of largely increased facilities will be recognized. Within the next two years St. John will be in a position to accommodate three times as many ships as it does to-day, and business will increase proportionately.

Production of Copper for Eight Months.

The *Engineering and Mining Journal*, published to-day, says: "We have received reports from all the refiners in the United States, with the exception of one, of their production of electrolytic copper in 1907 up to September 1. In the case of the one from whom report has not been received, we have been able to make an estimate of its production that we have reason to believe is close to the actual figure. These statistics show that the production of electrolytic copper in the United States during the first eight months of 1907 was 532,060,000 pounds. This was at the rate of 798,090,000 for the year. We estimate the production of lake copper during the same period at 156,000,000 pounds. According to published reports, which we believe to be approximately correct, the output of this district has been running about 10,000,000 pounds ahead of that of 1906, which, if maintained, would give 234,000,000 pounds for the current year. In the following table we give the production for the first eight months of 1907 in the first column; the estimated production for the year, if the same rate be maintained, in the second column, and the actual production of 1906 in the third column. The production of electrolytic copper in 1906 is taken as reported by the United States Geological Survey; the production of lake copper from our own statistics:

	1907 *Eight mos.*	1907 *Rate*	1906 *Actual*
Electrolytic	532,060,000	798,090,000	815,966,781
Lake	156,000,000	234,000,000	224,071,000
Total	688,060,000	1,032,090,000	1,040,037,781

The Scotch Steel Trade.

The London *Economist* of September 7 quotes a correspondent as saying that recently business has not been running smoothly in the Scotch steel trade. Within the past two months home demand has declined, foreign inquiry has pretty well dried up, and for orders on the books, specifications have been difficult to get. This applies more particularly to contracts for ship plates. In some cases it has been easy to keep the mills running regularly. "Then the bulk of the work going through has been to account of sales made when prices of material were lower than those that now rule, and as fuel in the interval has risen from 70 per cent. to 100 per cent., producers have been practically in the position of trading at a loss. Moreover, merchants with low-priced contracts are accommodating other merchants having higher-priced contracts by placing their specifications for the latter against the former. It goes without saying that this is done for a 'consideration,' and it is difficult to see how it can be objected to; but steel makers regard the proceeding as unfair and illegitimate, and have resolved to checkmate the move, if possible. At a meeting held in Glasgow recently, it was resolved that the remedy lay in reducing supplies, and with this object it was determined that one, and, if necessary, more establishments should be closed, those continuing open to compensate those that may be shut. It is believed, or, rather, hoped, that the step indicated will force the hands of both merchants and consumers, and if it does so promptly, nothing more will be heard of the proposal. Buyers are holding off, for values are at a high level, and they are aware that if coal was reduced in price, steel quotations would be lowered. But at the moment there is apparently not the slightest prospect of coal getting cheaper. Scotch colliery owners affirm that their outputs for the rest of the year have been practically arranged for at the full charges current, and that for any surpluses remaining a healthy continental inquiry exists. Quotations, it may be observed, are at the highest points registered since 1900, and they are within 1s. 6d. to 2s. a ton of the top prices of that year. If the anticipations now cherished as to coal values are realized, it follows, inevitably almost, that steel materials will not be reduced in price, and as that is evidently needed to stimulate consumption, the threatened closing down may then become a positive necessity. It has been decided that, should the worst come to pass, a large works, which roll only boiler and ship plates, should in the first instance stop. The chances are that this policy, once inaugurated, may commend itself to producers in other departments. In that event a serious condition in Scotch industrial affairs would supervene, and much hardship to general interests result. The situation is somewhat adversely affected for steel makers, by the fact that this week powerful German firms are offering ship plates in the Glasgow district at 8s. 9d. a ton below what local houses are naming officially. Continental makers have been rather out of the Scotch market for more than a year past, and their reappearance is significant of trade over the North sea not being as active and promising as it has been for some time back."

New York State's Banks.

The State Banking Department has issued the following statement showing a summary of the condition of the 198 banks in the state of New York at the close of business on August 22. Following is a comparative statement of the items contained in the summary with June 4 last, and with the statement of a year ago:

	Aug. 22, '07	*June* 4, '07	*Aug.* 6, '06
RESOURCES.			
Loans and discounts	$327,216,863	$327,163,004	$308,091,338
Liabilities of directors	11,816,235	10,835,127	9,055,364

Railway Returns Fiscal Year 1906.

A comparison of the earnings of the railroads reporting to the Interstate Commerce Commission on a per mile basis for the last four years follows:

Year ended June 30	1906	1905	1904	1903
Gross	$10,460	$9,598	$9,306	$9,258
Expenses	6,912	6,409	6,308	6,125
Net	3,548	3,189	2,998	3,133
Other income	1,154	1,068	1,003	1,002
Total income	4,702	4,257	4,001	4,135
Deductions	2,969	2,750	2,688	2,692
Net income	1,733	1,507	1,313	1,443
Dividends	1,227	1,097	1,046	960
Balance	506	410	267	483

In 1902 the net income was $1,400, in 1901 it was $1,235, and in 1900 it was $1,180 per mile. These figures, also taken from the Interstate Commerce Commission's report for the fiscal year 1906, will prove interesting:

	1906	1905	*Inc.*	*P. ct. inc.*
Stock issued	$6,803,760,093	$6,554,557,051	$249,203,042	4
Owned by R. R. companies	2,257,175,799	2,070,052,108	187,123,691	9
Owned by public	4,546,584,294	4,484,504,943	62,079,351	1
Bonds issued	7,766,661,385	6,024,449,023	1,742,112,362	29
Owned by R. R. companies	641,305,030	568,100,021	73,205,009	13
Owned by public	7,125,356,355	5,456,349,002	1,669,007,353	30
Total capital	11,671,940,649	9,940,853,945	1,731,086,704	17

	1906	1905	*Inc.*	*P. ct. inc.*
Stock per mile	$20,448	$20,668	*$220	*1
Bonds per mile	32,047	25,147	6,900	27
Total capital per mile	52,495	45,815	6,680	14

*Decrease.

CURRENT BUSINESS NEWS.

Commercial.

The Washington apple crop for this year, according to competent estimates, will sell for between $9,000,000 and $10,000,000. About half the crop will be exported. The crop for shipment this year will probably reach 5,000,000 boxes, each containing fifty pounds of fruit. State Commissioner Huntley reports that the state had within its borders at the beginning of this year, besides its wealth in apple trees, 949,299 plum and prune trees, 764,956 peach trees, 500,633 pear trees, 243,459 cherry trees, 30,689 apricot trees, 23,862 English walnut trees, 15,185 almond trees and 6,988 quince trees.

New foreign postal rates are to go into effect October 1. Foreign postage, which is now 5 cents for the first half ounce and 5 cents for each additional half ounce, will, after October 1, be 5 cents for an ounce weight and 3 cents for each additional ounce. There will also be adopted a system of return postage coupons. Persons desiring to inclose return postage to their correspondents will be able to purchase at the post office in this country a coupon for 6 cents, which will be redeemed in certain foreign countries in the universal postal union and converted into 5 cents' worth of stamps. These coupons will eventually appear at the International Bureau at Berne, Switzerland, where they will be redeemed by the various nations.

A London cable states that the Argentine Ministry of Agriculture placed the yield of wheat, 1906-07, at 158,480,000 bushels; linseed, 33,000,000 bushels. Total exports this year are estimated at 108,266,666 bushels wheat and 30,000,000 bushels linseed. Prospects are splendid for bumper harvest, 1907-08. Broomhall cables that the wheat crop this year will be 5 per cent. larger than last year, or 162,960,000 bushels, compared with 155,200,000.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—Owing to the continued favorable weather harvesting has made good progress during the past week. Early threshing returns are favorable. France—In the northern sections the crop is damp, otherwise the quality is good. There is some talk that this country will be in a position to export wheat this year. Germany—Harvesting has made fair progress during the week. Supplies continue light, although offerings show some increase. Denmark—Reports indicate a fair harvest. Hungary—The outlook for corn has improved, but the drought which continues is hindering plowing. Roumania—Some rain has fallen, which was beneficial, but more is needed to enable plowing to be carried on. Supplies are scarce. Bulgaria—Good rains have fallen, but the corn crop is expected to be only half of a usual one. Russia—Some reports indicate that supplies will be larger, but many complaints are heard regarding the quality of threshing arrivals. Reports regarding the seeding of wheat are favorable, while those for corn still continue, on the whole, unfavorable. Italy—According to harvest indications, the wheat crop of this country is of splendid quality. Australia — Latest reports state that drought continues.

Prices of cocoa, chocolate and chocolate confections are now said to be higher than for twenty-five years. It is estimated in confectionery trade that chocolate will cost manufacturers about $6,000,000 more than last year.

A cable from Cairo states that the cotton crop of Egypt exceeds 7,000,000 cantars, a cantar being a little over ninety-nine pounds. This exceeds all records.

In their monthly circular on coffee, Henry Nordlinger & Co. say that, according to the general estimate, at least 1,500,000 bags were carried over into the current crop year, beginning July 1, in the interior of Brazil. Most of the receipts during July and a quarter of the August receipts consisted of old crop. It is estimated by the firm that not more than about 10,500,000 bags will come forward at Rio and Santos during the present crop year, with about 600,000 bags Victorias and Bahias in addition. A considerable shortage in the crops of Central America and the East Indies is looked for, and the best information at hand indicates a world's production of only about 14,000,000 bags, against a world's consumptive demand of from 17,500,000 to 18,000,000 bags.

Scotch whiskey is to be advanced in price. Distillers say that owing to the great rise in the price of coal and the increase in the price of barley, due to a sunless summer, the cost of production has been raised to a point which leaves little or no profit. There are, however, considerable difficulties in such a step, inasmuch as there are too many producers and the stocks already bonded are overwhelmingly large. The number of distillers in Scotland is 164, of whom ninety-eight produce Highland malt whiskey, and the stocks amount to 118,000,000 proof gallons, equivalent to more than four years' supply. One suggestion dealing with the situation is that the distillers organize and that some of the distilleries be closed with a view to limiting production, the owners of the closed distilleries being compensated at a fixed rate by those kept working. This does not meet with entire approval, some of the most prominent distillers regarding it as impracticable.

Broomhall cables that the report of the *Journal of Commerce and Industry* (St. Petersburg) for the week ending September 7 states that the outlook for winter wheat in the southwest is generally unsatisfactory. Northwest very bad. Spring wheat generally fair, winter rye average, barley and oats above the average.

The new commercial Franco-Canadian treaty was signed this week by the French Minister of Affairs for France, by Sir Francis Burke, British ambassador at Paris, and by Messrs. Fielding and Brodeur for Canada. It is expected to greatly stimulate trade between France and Canada.

Luther Burbank has presented to the Leland Stanford University a box of apples containing seventy-three different varieties, all grown on the same tree. This remarkable production of one tree is the result of several years' experiments by Burbank in tree grafting. The apples are of all sizes and colors. Some are particularly fine for eating, while others are small and not remarkable.

The threatened crisis in the diamond trade has been settled by a pooling agreement between the De Beers and Premier diamond companies. The details have not been made public, but the selling agency will be maintained and will deal in the products of both mines on a basis to which the Transvaal government, as the chief factor in the Premier Company, has consented. It follows that the prices of diamonds will probably be fully maintained.

F. O. Licht has cabled Willett & Gray his preliminary estimate of the growing European beet-sugar crop as 6,230,000 to 6,700,000 tons, averaging 6,465,000 tons, against last year's crop of 6,700,000 tons.

Financial.

The directors of the Westinghouse Air Brake Company have recommended an increase in the capital stock of the corporation from $11,000,000 to $14,000,000, and in addition to declaring the regular dividend of 2½ per cent. and the customary extra of 2½ per cent., have decided on a stock dividend of 25 per cent. The approval of the recommendation will be asked from the stockholders at the annual meeting, to be held the first Tuesday in October. It will be followed by a call for a special meeting, as required by law, to authorize the proposed increase.

The Union Pacific convertible bond syndicate was dissolved Monday with a heavy apparent loss to its members. The syndicate agreed to find a market for all of the $75,000,000 4 per cent. issue that was not taken by the shareholders at 90. The syndicate was paid 2 per cent. commission for its guarantee, and, since it succeeded in selling only $4,000,000 or $5,000,000 of the bonds, including those taken by the shareholders, it had to take over $70,000,000 of the issue itself. The final installment was paid by the syndicate on the the 13th instant.

The Minneapolis, St. Paul & Sault Ste. Marie Railroad on Tuesday filed amended articles of incorporation with the secretary of state of Minnesota whereby its capital stock is increased from $21,000,000 to $42,000,000.

Directors of the Aurora, Elgin & Chicago Railway on Wednesday declared an initial dividend of ¾ per cent. on the common stock. This is a quarterly payment, and puts the stock on a 3 per cent. basis.

The New York state treasurer announces that his report for the fiscal year, ending September 30 next, will show a substantial increase in receipts and expenditures. The receipts will aggregate $46,000,000, nearly $45,000,000 having been received up to September 14. The total receipts last year were $39,094,868, an increase this year of nearly $7,000,000. The total expenditures for the state up to September 14 were $39,053,008, while the total expenditures last year were $33,847,997, an increase this year of nearly $7,000,000. The heaviest increase in receipts came from mortgage taxes, nearly $2,250,000 more than in the previous year. The excise taxes this year exceed the taxes paid in the previous year by $250,000. The receipts from the inheritance tax also show an increase. Other increases are due to the collection of franchise taxes.

In view of the fact that the number of New York Central stockholders has practically doubled since January 1 last, the directors on Wednesday adopted a resolution that hereafter dividends, when declared, will be payable to stockholders of record twenty days prior to the date of payment. It is understood that there are now registered on the New York books of the New York Central somewhat more than 15,000 stockholders, and that there are about 3,000 foreign holders. The regular dates for the payment of the quarterly dividends, according to the present programme, will be April 15, July 15, October 15 and January 15. As the result of the resolution, the books will close about the 25th of the month preceding that in which the dividends will be disbursed.

The Rothschild banking house has taken the $5,500,000 5 per cent. loan, the proceeds of which are to be devoted to the work of rebuilding the portions of Valparaiso which were wrecked by the earthquake of August, 1906. The bonds are due in eighteen months.

The Bureau of Insular Affairs has received a cablegram that at a special session the Congress of Santo Domingo passed a resolution delegating to the Executive full authority to act on the $20,000,000 loan contract with Kuhn, Loeb & Co. The loan will be taken at 96 cents on the dollar and will run for thirty years. The Santo Domingan government has the option to redeem it at the end of ten years.

German financial papers are complaining that of forty-seven industrial stocks listed on the Berlin Boerse during 1906, not less than thirty-nine are now selling lower than the listing prices, and that losses are most heavy. Only three of the other eight show substantial advances.

The Westinghouse Electric & Manufacturing Company has arranged for the sale to bankers in Paris of $4,000,000 ten-year 5 per cent. collateral loan notes.

The American Sewer Pipe Company has reduced its quarterly dividend from three-fourths of 1 per cent., the old rate, to one-half of 1 per cent., payable October 1. Books close September 21 and reopen October 2.

Two clauses of a rescript handed down by the Law Court of Maine, Thursday, declare stock buying on margin illegal. Clause 1 says that the purchase of stocks on margin is a gambling transaction and is illegal. Clause 2 asserts that when money is deposited or lent to another for the express purpose of being used in the purchase of stocks on margin, the promise of the one with whom it is deposited, or to whom it is lent to repay or be accountable, is based on an illegal consideration and cannot be enforced.

Railroads.

The Boston *Advertiser* says that "Charles S. Mellen, president of the New York, New Haven & Hartford Railroad, has informed the business men connected with three leading associations in Boston that he has reached the conclusion that it would be unwise for him to take any further steps toward any merger of the Boston & Maine road with his road in the present stage of public opinion. President Mellen also states that in view of the plain opposition shown so widely to the merger, he will take no action to press the plan upon Massachusetts. Nor will he ever press the subject hereafter, unless there are proofs that this opposition has disappeared."

President Finley of the Southern Railway Company, in a recent address to the Louisville Commercial Club, declared that he was an earnest advocate of the improvement of inland waterways. He also said that only narrow-minded railroad men oppose their development.

Industrial.

The London *Evening Standard* says that tenders for 100,000 tons of the best Welsh coal, for the American navy, have been accepted by Cardiff firms. The prices are kept secret. The delivery is to extend over 1908.

The annual report of John L. Rockey, chief of the Bureau of Industrial Statistics of Pennsylvania, for 1906, shows that the capital invested in the 3,057 industries reporting to the bureau last year was $932,842,453; that the value of their production was $1,630,168,953, and that the total wages of their 754,986 employees was $403,954,313. Returns from 668 textile establishments in Philadelphia show that they gave employment to 66,377 persons during the year; that their wages amounted to $29,363,863; that the value of the production was $128,058,603, and that the daily wages of the employees was $1.99. The 165 silk mills in operation in Pennsylvania last year gave employment to 28,963 persons; produced an output valued at $50,456,442, and paid out in wages $8,801,951. There are in Pennsylvania twenty-two plants engaged in the manufacture of cement, according to the report. In 1906 these plants gave employment to 10,781 persons, whose earnings aggregated $5,161,569.

A Houghton dispatch estimates that there are piled up on the lake docks 30,000,000 to 35,000,000 pounds of copper.

The American Locomotive Company has received an order for 125 locomotives from the Harriman lines.

It is reported that the Pullman Company has cut out all night shifts and reduced its forces over 2,000, compared with high figures of the year which exceeded 10,000 employees.

The Amalgamated Copper Company has taken steps to cut its production of copper by 50 per cent. If no improvement is shown in the demand for the metal, a still further reduction in output will be ordered.

The Bureau of the Census announces the results of its inquiry into the operations of vessels on the Great Lakes. The following table gives the results for all classes of crafts of five tons and over operated on the Great Lakes and the St. Lawrence river in 1906, compared with 1889:

	1906	1889
Number of vessels	2,965	2,737
Gross tonnage	2,391,042	920,294
Commercial valuation	$130,722,040	$48,580,174
Gross income	$65,278,487	$35,463,852
Number of employees	24,872	22,726
Total wages paid	$13,257,378	$8,098,191
Number of passengers carried	13,761,014	2,235,993
Total horse power of engines	981,452	----
Character of construction—		
Iron vessels	33	45
Steel vessels	538	40
Wooden vessels	2,367	2,641
Composite vessels	27	11

During 1906 the total domestic shipments from ports on the Great Lakes and St. Lawrence river amounted to 75,610,690 tons, and this compared with 25,266,974 reported at the census of 1889, shows an increase of 50,343,716 tons.

The American Smelting & Refining Company, which, it is estimated, smelts about 85 per cent. of the lead bullion output of the country, and in addition has silver-lead mines in the Cœur d'Alene district in Idaho, has requested independent producers of lead in that district to cut down their output 50 per cent.

The bituminous coal operators in the Pittsburgh district made the third advance within the past month in the price of soft coal Wednesday. The advance ranges from 4 to 4½ per cent., and the new prices are the highest ever known for coal at this time of the year. Higher prices before the winter is over are predicted because of car shortage and lack of mine labor.

It is stated that another reduction of force has been made in the Southern Railway shops at Spencer, N. C., 300 more men being laid off, with only 500 remaining at work. Further reductions are expected.

Copper wire has been reduced 4 cents, from 20¼ to 16¼ cents a pound. A short while ago 22¼ cents was the price.

Miscellaneous.

The total population of the proposed state of Oklahoma is 1,408,732 persons, according to the census which has just been completed. The population is distributed as follows: Indian Territory, 718,765; Oklahoma Territory, 689,967. The population of Oklahoma is an increase of 78 per cent. over the population as recorded in the census of 1900.

It is estimated in London that 100,000 Americans have spent $40,000,000 in Europe this season.

A protocol was signed at the State Department Tuesday by the diplomatic representatives of the five Central American republics accepting the invitation of the United States and Mexico to meet at Washington at an early date to negotiate an agreement providing for permanent peace between the countries represented.

Wm. A. Read & Co.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Whether attributable to the improvement in the general financial situation or because of favorable weather allowing of additional crop development, there is a perceptibly better feeling in general commercial lines. Warm weather has favored corn, and 75 per cent. of the crop is now reported out of danger from frost, while the same influence has allowed of cotton opening rapidly and picking and marketing becoming general. There is also less strain in the time money market, and some extensive operations previously held up have been consummated. Fall jobbing seems to have reached and passed its zenith perhaps a trifle earlier than usual, and now the traveling men are preparing to go out seeking reorders. Retail trade has hardly been as brisk as desired or expected, because the warm, forcing weather, while helping crops, has not stimulated fall buying to any great extent. Reports as to jobbing trade so far this fall are, in the main, favorable, though the undertone of conservatism is still perceptible, and the feeling is that frequent, rather than large, buying is to be the keynote of the autumn trade. Still, while the larger markets generally report a cessation of activity, the volume of shipments is heavy, and the smaller markets are reporting the influence of completed harvesting or of fall festivals in enlarged transactions.

There are still many cross currents visible which prevent generalization, and enough irregularity to convince many observers that a quieting down of excessive demand, concededly desirable in some lines, is not improbable. Easier money conditions are reported to have stimulated buying of raw wool by manufacturers, and a number of lines of cotton dress fabrics for next spring have been opened at considerable advances. On the other hand, the recent drop of 1¼ cents in cotton, consequent upon enlarged movement of new crop, has made for further ease in cotton yarns, and there are reports of lower prices made for men's-wear woolens for next spring by some manufacturers. Collections as a whole are better, but there are reports from some markets of more numerous requests for renewals of paper, and some large manufacturing enterprises with profitable contracts on hand have sought and received financial assistance to tide them over the tight-money period. The feeling in the iron trade is, on the whole, better, more inquiry manifesting itself, but the quotations of leading products are no firmer, and, indeed, some lines and markets are lower on the week. Still further reduced quotations for copper have evoked only a small volume of buying, and lead is also lower, with restriction of output of both metals actively in process. Prices of staples show little aggressive strength, except where, as in cereals, crop damage reports or straitened offerings advancing wheat 4 cents, September corn 6 cents, the December option 2 cents, and oats 1 cent. Some cessation of the liquidation which reduced cotton 1¼ cents is noted, but fear of equinoctial storm damage, similar to what occurred last year, is as effective here as is the desire of successful speculators for the decline, to garner profits and play for an upward reaction. Railway earnings are good—in fact, of heavy proportions—and there are reports of increasing difficulty in obtaining cars necessary to move coal, which is being freely bought east and west, lumber in the Pacific northwest and crops in the central west and northwest. Building material reflects the lessened activity in that line in easing quotations and quieter demand for yellow pine and hemlock in the west. There is also less doing at leading eastern centers in this line. Bank clearings as a whole show a decrease from a year ago, largely because of reduced speculation at leading eastern centers, but four-fifths of the cities show gains over a year ago.

Crop reports to BRADSTREET'S show that 75 per cent. of the corn crop is now out of danger of frost damage, with the remainder of the crop requiring from October 1 to October 15 to mature. A total crop not exceeding 2,500,000,000 bushels is indicated. Much of the crop is small and may not produce good corn. Best reports as to condition come from Nebraska and Missouri. In Iowa some of the crop is still unmatured. Some cutting is reported in Iowa and Illinois. Frost has hurt the northwestern corn crop. Threshing returns from spring wheat are not very favorable, and the crop will be smaller than earlier expected. Damage by frost has been done to the Canadian crop. In the Pacific northwest large yields of wheat and fruit are reported. Late advices from government sources as to the minor crops indicate shortages from last year in all lines except cane sugar, rice and peanuts. Apples will be only half a crop.

Cotton is opening rapidly and picking is general at the south, with labor scarcity complained of. Short crops are predicted for Texas and Alabama because of dry weather. The lower Mississippi valley sends good reports, as does Arkansas, and the advices from the south Atlantic states are as good as heretofore.

The increased cost of everything entering into the manufacture of whiskey has made that product firmer at the high prices reached, which may be further increased. Corn costs 13 cents, barley 25 cents and malt 55 cents a bushel more than a year ago. The cooperage cost has advanced $1 to $1.50 per barrel, and Bourbon cooperage is now $4 per barrel at Cincinnati, as against $2.65 a year ago. The cost of skilled help has also increased. Spirits reached the highest prices for years at Cincinnati and Louisville, where the quotations are respectively $1.34 and $1.38. At Louisville straight Kentucky whiskey is high, partly because of scarcity, due to unprecedented demand, and partly because of the operations of the pure food law. Cable reports also are to the effect that increased cost of production is likely to result in higher prices of Scotch whiskey.

Foreign trade returns for August show that imports are still gaining heavily, while exports tend to lag. Thus, imports for the month gain 19 per cent. over a year ago, while exports fell off 1.6 per cent., the net result being an excess of exports over imports of less than $2,000,000, whereas a year ago the excess was over $24,000,000.

The tenor of pig-iron markets has improved, largely as the result of more activity at the east, where the lower level of prices has produced some business. More strength is also visible at the south, where, though business is quiet, the leading interests appear to be united in maintaining prices on the higher grades, although some of the smaller producers have been quoting as low as $17.50 for No. 2 foundry, Birmingham. In central western territory, iron founders are hardly so active as they were a couple of months ago, but cancellations of high-priced iron are not large. At the same time there appears to be a more marked disposition to "feel" the market. Iron for steel making, Bessemer, for instance, is stronger, but basic pig is being offered at reduced prices in the Pittsburgh district, which fact tends to enliven demand, but in the central west there is scarcity of that product. Steel billets are in short supply. New demand for heavy steel rails is light, but trade in light rails is pretty fair. Orders for structural material are of fair proportions. Plate and skelp mills are more anxious for new business than they have been recently. Steel castings tend to weakness, the situation in that industry not being so harmonious as heretofore. On the whole, finished lines look for some diminution in tonnage in forthcoming months, but no marked weakness in prices, inasmuch as quotations have not been unduly advanced. Copper and spelter are again weaker, and the leading interests have taken steps to curtail outputs by 50 per cent. in each instance. As low as 15¼ cents has been quoted for lake copper within the week, while 15 to 15⅛ cents has been named for spot electrolytic, and prices on futures range from 14¾ to 15 cents the pound. At the lower levels business became a little more active, chiefly from over-sea consumers, who appear to be impressed by the prospects of reduced production here. Not much of a demand is looked for from domestic consumers, it being reckoned that stocks of finished brass and copper goods are heavy. Copper wire prices have been reduced 4 cents per pound.

In spite of unsettled conditions in the copper stocks, speculation at the New York Stock Exchange has for its feature the strength of leading issues like Northern Pacific, Union Pacific, Great Northern and Reading, the United States Steel stocks having also tended to rally on more reassuring official utterances about trade conditions. Covering by shorts has been supplemented by apparent support by powerful interests, whose bullish manipulation is more or less apparent. The bond market reflects a more cheerful tone respecting the future, and the new New York City bonds showed a decided advance. Foreign exchange is slightly firmer at around 4.85.50@4.85.60.

Bank clearings for the week ending September 19 aggregate $2,748,872,000, 3 per cent. over last week, but 13 per cent. below this week last year. Outside of New York exchanges amount to $1,107,563,571, a fraction over last week and 7 per cent. over the week last year.

Business failures for the week ending September 19 number 179, against 172 last week, 171 in the like week of 1906, 173 in 1905, 203 in 1904 and 185 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending September 19 aggregated 4,340,854 bushels, against 5,291,866 bushels last week, 4,677,522 bushels this week last year and 3,840,574 bushels in 1901. For the first twelve weeks of the fiscal year the exports are 38,841,836 bushels, against 35,303,369 bushels in 1906-07 and 73,444,392 bushels in 1901-02. Corn exports for the week are 298,911 bushels, against 677,135 bushels last week and 545,751 bushels in 1906. For the fiscal year to date the exports are 14,113,726 bushels, against 7,988,398 bushels in 1906-07.

IN CANADA.

Trade is good in Canada despite tight money, and the feeling is cheerful as a whole, though reports of frost damage to uncut wheat have led to some uncertainty. A favorable feature in western Canada has been the subsidence of the rampant land speculation of the past two years. Money for this particular purpose is hard to get. Montreal reports stocks of dry goods in retailers' hands light, and that trade in winter goods with jobbers is brisk. Exports of butter and cheese are light. Toronto wholesale trade is satisfactory, with dry goods, canned goods, hardware and building materials active, but with a tone of conservatism pervading trade generally. Collections are not active. In Winnipeg recent frosts are feared to have hurt uncut grain, but the proportion of damage is uncertain. It is felt that the damage in Manitoba has been light. Collections range from slow to fair. The anti-Asiatic excitement has very largely subsided and trade has been little affected. Failures for the week number 40, as against 22 last week and 26 in this week a year ago. Clearings for the week aggregate $82,500,000, a decrease of 1.2 per cent. from last week, but a gain of 9 per cent. over this week a year ago.

TRADE REPORTS.

At New York a good, active business is still reported throughout the dry-goods trade, which, as hitherto, is principally in cotton goods, silks and dress goods. Woolens are, however, doing better, the demand having increased over that of the past two weeks. Prices are well maintained and collections show some improvement. In the clothing trade, a very fair amount of business has been transacted. Cotton and worsted yarns are not at present very active, and spinners are offering shipments at low prices to make immediate sales. Manufacturers of knit goods are busy and have booked orders for their entire output. The raw silk market is quiet, and the material coming to hand is for the most part under contract and only to fill orders on hand. In the cloak, suit and waist lines there is a noticeable improvement in collections. Manufacturers are booking a good business for future deliveries, and in the retail trade sales are steady and satisfactory. Wholesale grocers report satisfactory sales for the current week. Prices are well maintained, and buyers are freely taking goods. At retail there is some improvement, and there is at present an active movement in canned goods. Olives and olive oil are steady, and a fair volume of business is being transacted in both. Receipts of eggs are light, and there has been a fractional advance in price. Butter receipts are also light, demand good, and it is 1 cent dearer. Cheese is in only moderate supply, the market is steady, and none has been offered for export. Apples are more plentiful and cheaper. Canteloupes are freely offered and prices are reasonable. Flour receivers say trade is dull, and buyers force concessions which millers must meet or wait. Manufacturers of hardware report conditions fairly satisfactory, but orders ahead are not up to those of previous years, although many factories are working on orders for future delivery. The same condition obtains in the manufacture of brass goods and gas fixtures. The outlook, on the whole, is not considered so entirely encouraging as in 1906, although in some instances manufacturers are crowded for delivery and have plenty of work ahead. The principal cause of complaint, however, is difficulty of collection, and this appears to be general throughout the metal trade. The larger copper producers are curtailing output until such time as conditions are more nearly normal. During the past week consumers have made some purchases and some authorities take a hopeful view of the situation, but others look for still lower prices. Structural steel is active and collections are fair. Pig lead is weak. Manufacturers of American hemp twine find business good. Prices are firm owing to the strength of the market for raw material. Cotton cordage is scarce and demand exceeds supply. Conditions in wholesale paper are good; there is a steady demand, and prices are firm with an upward tendency, notwithstanding late advances. While the past week has shown some improvement over the previous week in amount of transactions in real estate, the market is still sluggish, and the month's business so far shown is less than that of any September for a number of years. The scarcity of money for building mortgages has kept the speculative trade idle, and only a few plans for new buildings have been filed. Lumber and building materials are dull and the volume of business transacted is comparatively small. Prices, however, are unchanged. A fairly active business has been done in white lead and oxides, but consumers are not showing any disposition to enter into contracts as they look for lower prices. Dry colors remain quiet, and as yet there is no indication of large fall trading. Whiting and china clay are active. Glue is in request and supplies comparatively light, the principal activity being in low-grade varieties. Prices for all descriptions are, however, firmly held. A brisk business is done in linseed oil, demand being for prompt and early deliveries.

The following telegrams show trade conditions at the cities mentioned for the week ending September 20:

BOSTON.—Dry goods jobbers are doing a good business, and demand continues strong with prices at high levels. Retail trade has been checked by warm weather, and collections from retailers are somewhat slow. At opening this week of dress ginghams for the next spring season, announcement was made of new prices on red seals, Everett classics and York seersuckers, and also of an allotment to buyers of only about 35 per cent. of their purchases of last year, this allotment amounting to

the actual capacity of the mills. Prices announced are: Red seals 11½ cents, against 9 cents a year ago; Everett classics 8½ cents, against 6 cents last year; York seersuckers 11 cents. The purchase of 125,000 pieces of gray print cloths, 28-inch 64x64, for January delivery, by M. C. D. Borden, of the American Printing Company and the Iron Works Cotton Mills of Fall River, is announced. The price for these goods is reported to be the highest for many years. Side leathers are inclined to yield to offers of jobbers. Glazed kid is very quiet, but prices are firm. Hides refused to yield further, and market appears to be active enough to permit further accumulations. Shoe manufacturers are now doing a normal amount of business, but orders in sight are moderate and indicate an early approach of the between-seasons shutdown. Dealers in chemicals report that the decline in borax and white lead has resulted in more business. Drugs are moving about as usual at this season. Dyestuffs and tanning materials are moderately active, with a steady tone. Trade in carpets, furniture and upholstery goods is of fair volume, but collections continue slow and show little improvement. Lumber is generally quiet. In northern and eastern lumber the demand is light, building operations being slack, owing to tightness in money market. Southern lumber and hardwood show little change, cypress being fairly active. In building supplies, such as lime, cement, bricks, etc., the market is quiet. Painters' supplies continue in fairly good demand. The coal market is active in the bituminous line, the stocks being scanty, with prospects of higher prices. Hard coal is quiet, owing to the raise in winter prices.

PROVIDENCE.—Manufacturing jewelers report a large amount of business, and supply houses in this line are rushed. The jobbing dry-goods and notions trade shows an excellent business. Cotton goods are active, with some advances in prints. Collections are very slow.

PORTLAND, ME.—General trade conditions are favorable for the usual fall business, both at wholesale and retail. Sweet-corn packers are now busy taking care of that crop, which, with favorable weather, promises 80 per cent. of normal. Sardine packers report an abundance of fish, but scarcity of cans will reduce the pack.

PHILADELPHIA.—Wool is beginning to show more activity and mills are disposed to buy in larger quantities. The finer grades sell readily at current prices, but coarser wools are in less demand. On the whole, the market shows an improvement and quotations are hardening. Cottons and cotton yarns are dull, and the speculative condition of the market deters buyers from stocking up. Dry-goods jobbers report very good business, though orders are not quite so large as a year ago. Prices are firm and collections fair. Chemicals and dyestuffs are very dull, except in staple grades, the demand for which is fair. Prices are reported steady. Paints and glass are in good demand at firm prices. Lumbermen report a fairly active demand for hardwoods at high prices, and there is also a good market for building material, but trade conditions are not entirely satisfactory and there is complaint about slow collections. The leather market shows no appreciable change. Hides and skins continue weak, with no demand of moment and full supply. Goatskins continue weak on small demand and full supply. Glazed kid shows no change, the demand being only fair, supply full and prices about same. Boot and shoe dealers report only fair business, with no change in prices, but a better quality of product for the same price than last year. Tobacco is dull, fall trade has not opened and cigar factories are not so busy. Their western orders are lighter, The Wisconsin crop, it is estimated, will be short 50 per cent. Prices on old goods are therefore firmer at 20 to 21 cents. Pennsylvania 1906 is quoted at 22 to 24 cents. Dealers have commenced to buy it, but users are not ready, high money and hope of lower prices keeping them off. Havana seconds and Zimmers are scarce. Liquor distillers make no effort to sell, though there are many inquiries for goods. They are unwilling to make quotations until prices are announced for contracts for the fall of 1907, which are expected to be 5 cents higher, owing to advance of grain, due to large export, also on cooperage. Spirits have also advanced 2 cents. Sales are small and collections slow. Prices and trade conditions of iron are without material change. Demand is moderate, there is a feeling that prices are not likely to go much, if anything, lower, and the production now being more nearly regulated by the demand, stability seems probable. The domestic coal trade is light, influenced by continued warm weather, but the demand for steam coal is good, scarcity of mine labor and not overabundant transportation facilities having some effect. Prices range from 10 to 15 cents higher than they were.

PITTSBURGH.—The pig-iron market remains devoid of animation, no transactions being reported, and what few inquiries are made do not result in sales. Production has not been up to the average on account of weather conditions, the worn-out state of many of the furnaces, owing to long continued operations under the stress of a hungry demand from the mills, and the blowing out of several furnaces for repairs. Quotations at present are called nominal. The last sale of Bessemer iron was at $22, valley furnace. Mill operations continue unabated and there is nothing to indicate any recession in business, though it is admitted that new business, especially of the large tonnage class, is lighter. Coke is in good demand and prices are holding firm. Production is not up to the average, there being a shortage of labor, and the available surplus supply is rather low. Spot quotations for pig iron at the valley furnaces are as follows: Standard Bessemer, $22; chilled basic, $21; No. 2 foundry, $21.25, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.90, and foundry coke at $3.25 to $3.50, at the ovens.

BUFFALO.—Retail trade is well sustained, fall on business opening well. Among wholesalers dissatisfaction is expressed, although quietness is noted in some lines, as in lumber. Collections are fair.

BALTIMORE.—The feature this month has been the increased number of buyers in the market, the number already being several hundred in excess of 1906, when 1,500 registered in order to obtain rebates on purchases of $1,200 and over. The volume of business exceeds that of 1906 in the majority of lines, which, however, does not represent increased purchases, but an increased number of buyers. There is a tendency shown to buy cautiously, as prices are as high as they are expected to go, and merchants are taking the chance of reordering and obtaining the goods in preference to buying as freely as heretofore. This is partly caused by the rather full stocks carried over by a number of the southern merchants this spring, the result being reflected in the increased number of requests for extra time for settlements and closing of accounts by notes. Sources of supply are feeling the effects of this manner of settlement. General mercantile deposits at Baltimore are less than for some years at this period, and the banks have been called upon to renew more paper than heretofore. The beginning of the movement of the cotton crop and the receipts for shipments of grain are expected to bring about an easement in the money market. October 1 will find the usual demands for loans from the wholesale dry-goods jobbers for discount purchases, and it is believed it will be the latter part of October before the general money market will be favorably affected. The demand for money at present is greater than the supply. There is a feeling of confidence shown, however, and merchants are reaching out for new territories with satisfactory results. The buyers in town this week are mainly from tidewater Virginia and the eastern shore of Maryland, together with merchants from North and South Carolina. It is expected that house trade will continue up to October 1, as quite a number of customary buyers have not yet been on. Retail trade at Baltimore is quiet owing to weather conditions, which have somewhat curtailed fall sales in men's furnishing lines, particularly hats. Retail business in shoes is not up to the usual volume for the season. Cotton-duck manufacturers and coal shippers report a continued good business. The tomato harvest is now on and growers are realizing good prices. There has been an absence of the usual glut in fresh fruit, and market tomatoes are hovering around contract prices. General business in lumber is very quiet, with a marked decrease in sales for the month. Drug business is active, but collections in this line, in common with others, are very poor.

CINCINNATI.—General business has increased in volume with the influx of country buyers. Demand for money is much reduced. Whiskey is firmer, sales being on the basis of $1.34, owing to the increased cost of everything which enters into its production. The following are cited: Corn, 13 cents; barley, 25 cents, and malt, 55 cents a bushel over the prices of last year, while cooperage has advanced $1 to $1.50 a barrel. Bourbon whiskey cooperage is to-day $4 a barrel, against $2.65 a barrel last year, while skilled help in many departments has materially increased in cost. In the district tributary to Cincinnati wheat is about all threshed. The volume already marketed is not as great as last year. The belief holds among farmers that higher prices will prevail, and they hope to profit accordingly. Crop planting preparations justify the belief that a larger acreage will be sown this fall than last. Oats have been mostly all threshed and the yield has been disappointing. Little of it has been marketed. Corn is ripening nicely and will turn out fairly well. Very little has been offered for sale. There is quite a large portion of last year's corn still unsold. This, like wheat, is being held for higher prices. Tobacco promises well. Recent storms have injured those portions of growing crops planted in lowlands. So far there has been no difficulty in obtaining cars for moving all crops, except hay.

CHICAGO.—A good business is under way, but it is hardly to be expected that decided increases over the two previous weeks should be made in the general run of jobbing trade. The big buying for the fall and early winter trade is over, and the reassorting period is at hand. Consumption is large, and while manufacturers are not getting as many new orders, they are well supplied with old ones, which keep their capacity well employed. This slowing down of trade is regarded as a good feature, and ultimately will benefit all lines, as there had been too great an expansion to continue. Dry goods are having the best sale, and there is no loading up with goods that cannot be disposed of. Sales of pig iron have increased, and shipments of 30,000 tons were made from this district to the east last week. New buying, however, is mainly in small lots. Foundries throughout the west are busy, but many report an easing up in new orders, although they have enough on hand to run for several months. Large machinery and other manufacturers have had to be helped out to enable them to carry on their business and complete the large contracts in hand, in which there are good profits, but the necessity of ready money for the purchase of supplies and payment of help has exceeded their ready funds. Collections are rather slow, and this makes it more difficult to operate, especially while money is tight. Agricultural people are furnishing specifications for steel, and good buying of structural material is under way. Coal sells more readily and scarcity of cars is complained of. An easing up in the demand for lumber and a shading of prices of yellow pine and hemlock is noted, as a few dealers are carrying more stock than they desire. In other lines of trade a fair business is under way without developing striking features. Butter and eggs advanced and poultry and potatoes declined. Cattle, hogs and sheep are lower. Receipts of cattle and sheep increased and hogs decreased. Currency shipments to the interior increased. Money strong, with a good general demand. Warm weather has hastened the maturing of the belated corn crop, and 75 per cent. of the crop in the leading corn states is past injury from frost, while the other 25 per cent. will require an absence of frost until October 1 or the middle of that month to mature in good condition. In parts of Illinois and Iowa the crop is being cut and is as good as last year. There is a larger percentage of small and late corn than in recent years, and much of it will never make good corn. Previous estimates are slightly enlarged, but 2,600,000,000 bushels are considered a high figure. Frost in the northwest caught some of the corn, but the acreage there is small. Threshing of spring wheat is disappointing, and it looks as though early estimates will have to be materially reduced. In the Canadian northwest the crops have been seriously injured by recent repeated frosts, which have caught about 50 per cent. of the crop uncut and shriveled the berry to an extent that little will grade above No. 3. Plowing for winter wheat has been retarded in many sections by drought. Marketing of all grains is rather above the average, especially of barley and oats, which command fancy prices.

TERRE HAUTE.—A tomato shortage is reported by canners, who allege that farmers have broken contracts and are selling for better prices.

LOUISVILLE.—The state fair has brought a record number of out-of-town merchants here, and trade in all lines is immense. Spirits reached the highest price for years, $1.38 a gallon, due to the increased cost price of materials and labor. Straight Kentucky whiskey brings increased prices, due in part to scarcity of the article, for which there has been an unprecedented demand, and partly to the operation of the pure food law.

ST. LOUIS.—House trade is practically over. Only a few merchants from nearby towns are in the market. Traveling men are preparing their samples and will be out in their respective territories within the next few days. Jobbers and manufacturers are busy filling and shipping orders. In dry-goods, hats and shoes the volume of fall orders placed compares favorably with last year's. In millinery, ribbons, gloves and kindred lines the volume of business exceeds last year's by at least 20 per cent. Manufacturers of ladies' ready-to-wear suits have many orders booked for immediate shipment, but are handicapped on account of scarcity of skilled help. Some cancellations are feared. Cheap and medium grade shoes are being shipped on time, but fine grades are slow in getting to their destination. Furniture, carpets and house furnishing show a falling off in volume, but with advanced price the turnover about equals last year's. Building material shows a decided falling off. Manufacturers of shirts and overalls say the past season was one of the best. Groceries and drugs are active at firm prices. Collections range from fair to good. Department stores are advertising fall openings, and while business is still quiet in their line, the outlook for fall and winter business is encouraging. Flour continues active at firm prices, with an upward tendency. Export business is exceptionally heavy, with prices firm. Banks and trust companies show no disposition to buy outside paper. The demand from their own customers is good at 6 per cent. Hot, clear weather during the past week benefited corn, and the crop is now believed to be out of danger of frost. A strike of shoe factory operatives is claimed to have made 7,000 persons idle.

ST. JOSEPH.—The condition of corn in Missouri continues good, and in northern Kansas it is also good, except in six counties. Weather conditions are favorable.

KANSAS CITY.—Business in all jobbing lines continues very satisfactory for the season. Fall shipments show a healthy increase over previous records. Lumber, builders' hardware and material are in good demand, owing to increased building operations. Groceries and provisions are active. Retail trade is good. Collections range from fair to good. Money continues in good demand, and interest rates have increased. Weather conditions are excellent for maturing corn.

MILWAUKEE.—Trade in jobbing and retail lines is very satisfactory. Collections are a little slow.

SIOUX CITY.—Wholesale dealers report good trade. Retail business is fair. Collections are good. The weather is hot and the major portion of the corn crop is safe. Good rainfalls have placed the soil in good shape for fall pasturage and plowing.

DAVENPORT.—Retail trade is quiet owing to unseasonable farm weather. The weather has been favorable to corn, which is still in the milk and needs more warm weather. Collections are fairly good.

ST. PAUL.—All lines are doing a brisk current business, and salesmen are sending in good orders for spring goods. The orders are as large as last year's. Collections are very fair, the result of marketing wheat at present high prices. Merchants are very hopeful throughout this territory for increased business. The crop situation continues to improve with the late returns, and although threshing is delayed somewhat by wet weather and scarcity of labor, the high prices and fair yields will insure prosperity. Cotton fabrics will be advanced 40 per cent. on Tuesday next.

MINNEAPOLIS.—Both retail and wholesale interests report excellent business for the season, and collections are also improving owing to the increased price of cereals over last year. More money is required to handle the crops, and the stronger rates of interest now prevailing are a result. Receipts of barley have been unprecedently large this week and account for increased bank clearings. Flour is firmer in price, but buyers are still backward.

OMAHA.—Wholesale and retail trade continues active, money is in good demand and collections are fair to good. Corn is maturing rapidly and is practically out of danger from frost.

LINCOLN.—Most lines report good business, with collections fair.

CHARLESTON.—Wholesale trade continues good. Retail trade is quiet. Cotton is being picked rapidly. Collections are fair.

RICHMOND.—Sales of dry goods and kindred lines are up to, and in some instances exceed, the average. Late and filling-in orders are being received. Manufacturers of and dealers in paper, paper bags and twine are doing an active business.

The raw material and finished products are high in price. The new cotton crop is being marketed in small amounts, and prices show a decline from those received last week. Prospects for the late crop are still favorable. In North Carolina and southern Virginia the new crop of tobacco is being marketed. Prices thus far have been satisfactory and the demand active, especially for the better grades. Retail trade is active. Collections show slight improvement over last week.

ATLANTA.—Trade continues good, and the marketing of some new cotton has stimulated both collections and trade. The weather has been ideal for cotton picking. Farmers are already beginning to complain of a scarcity of labor.

MACON.—Collections are good and money is becoming easier.

BIRMINGHAM.—Southern foundry No. 2 pig iron is weak. Trade in general shows a little gain, due to cooler weather. Lumber and coal are not so active. Farming is backward.

MOBILE.—Trade in all lines is active. Fall purchases for country sections are good and compare favorably with the best of years. Collections in the main are satisfactory. Cotton is moving freely, and the lumber situation shows signs of improvement.

MONTGOMERY.—Business shows some improvement in wholesale and retail lines. Collections are fair. Dry weather continues and a cotton crop shortage is expected. Very little cotton is being marketed.

CHATTANOOGA.—Retail trade shows a slight lull, preceding the opening of the fall and winter seasons, though present weather conditions are favorable. Collections range from fair to good. Building continues active.

MEMPHIS.—Retail trade is quiet, but wholesale is improving. A good fall is anticipated. Some lines report collections slow, others good. Cotton is opening, and picking is under way.

LITTLE ROCK.—Business continues good in most lines despite unseasonably warm and dry weather, which, however, is the means of causing cotton to open rapidly. Bank clearings show a steady growth in local business every week this year, as compared with the same period in 1906. Collections are fairly good.

NEW ORLEANS.—General trade is quiet, but local conditions are good. Collections are backward. Crop prospects are encouraging.

FORT WORTH.—Trade is a little more active, but collections are dragging.

DALLAS.—Present indications are that the cotton crop will be short of last year's. However, prices will be good. Trade conditions are favorable and collections are fair.

WACO.—Business is fair and collections are good. Recent good rains in this section came too late to help cotton.

SAN FRANCISCO.—Labor in the city is generally sufficient, although short in the country districts. The market for building materials is better organized and prices are decreasing. Wages, with some exceptions, have reached a minimum scale, and the labor-union boycott of the street railway system has been removed, though the strike continues. Money is still tight and collections are slow.

SEATTLE.—Wholesale and retail trade continues active. Collections are fair.

SPOKANE.—Wheat is being rapidly harvested. The yield is large and prices are good. Fruit is also yielding good returns. Collections are fair.

TACOMA.—Trade continues up to expectations, and the outlook seems bright for increased activity this fall.

PORTLAND, ORE.—Demand for staples in all lines exceeds expectations, and collections are satisfactory. A shortage of cars hampers the handling of the new crop to a considerable extent, and lumber mills are also affected thereby.

TORONTO.—Wholesale trade is brisk and there is a general feeling of satisfaction regarding future trade. In some lines there are complaints regarding collections. For some time remittances have been slow and there have been a good many renewals of outstanding paper. A summer trade that was, in most lines, just moderately good did not greatly relieve matters, and not much improvement is looked for until the crops are pretty well marketed. Orders, however, are good, and large shipments are going forward. In all lines of trade a healthy but conservative tone is noticeable. The period of tight money and of slightly lessened briskness in some lines of activity have been a warning that has been taken to heart in a way that promises well for the trade of the country at large. Dry goods report a brisk trade. The better lines of dress goods are in heavy demand. Prices are generally steady to firm. Orders to mills continue heavy. Grocers report an excellent business from the west and the northern country. Staples are in good demand and firm in tone. Canned goods are active. The hardware trade holds a good tone. Sporting goods and general winter lines are moving well. It is said here there will be less building a year from now, which will mean a somewhat less active demand for supplies. At present they are in good demand. Country trade is fair and expected to improve towards next month.

MONTREAL.—General trade continues steady. Wholesale and retail trade is satisfactory and the outlook is bright. The reports of damage to western crops by frost have created some concern here. It is not yet known to what extent damage has been done, but it is not expected general business will be affected to any appreciable extent. Tightness of money continues a big factor. The feeling that the situation is improving continues to grow. There is still a very great demand for money. Wholesale trade generally holds brisk. In dry goods, it is now stated, retailers' stocks are unexpectedly light, owing to good, brisk selling of summer lines during August. Orders for winter lines continue brisk and values hold firm in tone. Manufacturers of made-up goods report deliveries better than at this time a year ago. A very heavy trade is being done in men's ready-made clothing. The output this season during the fall and winter will be very large, despite the fact that prices show a general advance. The demand, too, is particularly heavy for lines of quality. Cotton manufacturers have orders for far into 1908. Groceries are more active. Butter and cheese are firm; exports of these lines continue light. Hides are weak in tone. Boot and shoe manufacturers are busy and good orders are coming forward for winter lines. Collections are generally fair.

VANCOUVER-VICTORIA.—Excitement over the question of Asiatic immigration has subsided, and general trade has been little affected. Wholesale lines are moving well, general orders being heavy from all parts of the province. Groceries are moving well and values hold firm. Canned goods are particularly so. There is a brisk movement in all lines of wholesale hardware. Retail trade is brisk and collections are good. A good trade is being done in fruits. Almost all crops of small fruits are turning out well.

WINNIPEG.—Until the past few days there has been the most confident feeling regarding future trade throughout western Canada, but recent frosts, which arrived while grain was still standing in many parts of the country, have caused considerable apprehension. It is not feared that the damage will have been sufficient to seriously affect the total volume of trade, but the effect will have to be reckoned with in different localities. In Manitoba and Alberta the damage is lightest, most of the grain having been cut. Orders to wholesalers have been good, and heavy shipments have been going into retailers' hands. Collections are slow to fair. A helpful feature is the subsidence of land speculation that has been going on for some years. Money is elsewhere needed and is hard to get.

FINANCIAL.

Money Market.

During the past week the New York loan market has been steady, without any special change, although the renewal rate for call loans, which was 3¾ per cent. at its beginning, was advanced to 4 per cent., receding to 3½ per cent. on Friday. The offerings of time money were also a little less liberal; but, on the other hand, the inquiry for four to six months' arrangements seems to have been less pressing, indicating, in fact, that Wall street borrowers were generally well supplied with such accommodation, the rate for which has ruled steadily all week at 6 per cent. It was noted, furthermore, that foreign bankers were not making loans to any extent, which was indicated by the absence of finance bills in the foreign exchange market and the slightly higher quotations for sterling. Transfers of funds from New York to interior cities, particularly New Orleans, have been fairly large, but were offset by the increase in the government deposits in the banks, which is understood to have been going on steadily, and it is estimated that the New York institutions have gained about $2,000,000 for the week. More or less attention is being paid, however, to the commencement of the cotton movement in the south, which will call for considerable amounts, but, on the other hand, will bring a large amount of commercial bills into the exchange market.

Bonds, gov.	374,500	574,000	33,623,000	54,593,150

New York Banks.

Various incidents, such as the Union Pacific syndicate dissolution and the city bond subscription, influenced the New York bank averages for the week ending last Saturday, so that the changes were of an irregular character. The increase in the loans was only nominal, being $375,000, while the net loss of $861,800 in cash did not agree with the estimated actual movement of money, which indicated a gain of about $2,000,000. The decrease of $1,632,600 in deposits was at variance with the changes in the foregoing items, but this reduced the amount of reserve required by $408,150, so that the surplus reserve showed a decrease of $453,650. The figures of the statement compare as follows with those of the preceding week:

	Sept. 14	Sept. 7	Changes
Loans	$1,088,972,200	$1,088,597,200	I. $375,000
Specie	198,909,900	210,317,400	D. 1,407,500
Legal tenders	69,221,900	68,676,200	I. 545,700
Deposits	*1,044,852,400	1,046,485,000	D. 1,632,600
Circulation	50,649,200	50,477,000	I. 172,200
Total reserve	268,131,800	268,993,600	D. 861,800
Reserve required	261,213,100	261,621,250	D. 408,150
Surplus reserve	6,918,700	7,372,350	D. 453,650

The following shows the relation between the respective dates:

	Sept. 14, 1907	Sept. 15, 1906	Sept. 16, 1905
Loans	$1,088,972,200	$1,036,460,400	$1,085,821,900

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending September 19 shows an aggregate of $2,748,872,000, as against $2,667,811,000 last week and $3,159,007,000 in the corresponding week last year. Canadian clearings for the week aggregate $82,737,000, as against $83,518,000 last week and $75,421,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	September 19	Inc.	Dec.	September 12
New York	$1,641,309,000	....	22.8	$1,574,324,000

Foreign Exchange.

There was a rather firmer tone in the exchange market, which became more noticeable as the week progressed. The supply of commercial bills was fairly large, but offerings of finance bills were apparently lacking, while the inquiry for remittances assumed a somewhat more active character, the market at times showing a decidedly dull appearance. There was nothing in the financial situation either here or abroad to influence exchange rates, but the comparatively strong return made for the week by the Bank of England attracted favorable notice. Posted quotations were unchanged at 4.82½@4,86½, while actual demand sterling, which was quoted at as low as 4.85 25 early in the week, advanced to 4.85.50, this movement naturally putting a stop to the talk of gold importations.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Sept. 14	*Sept.* 16	*Sept.* 17	*Sept.* 18	*Sept.* 19	*Sept.* 20
4.82½ @ 4.86½	4.82½ @ 4.86½	4.82½ @ 4.86½	4.82½ @ 4.86½	4.82½ @ 4.86½	4.82½ @ 4.86½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.81.60 @ 4.81.80	4.81.60 @ 4.81.75	4.81.60 @ 4.81.70	4.81.70 @ 4.81.75	4.81.80 @ 4.81.90	4.82.00 @ 4.82.10

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.25; commercial bills, 4.81¾; francs, 5.21¼ less 1-64@5.17½ less 3-32; reichsmarks, 94@94⅞ plus 1-32.

The Bank of England's discount rate remains at 4½ per cent. Its statement showed an increase of £480,478 in gold, and the proportion of its reserve rose from 51.28 per cent. to 51.67 per cent. In the London open market call money is quoted at 1½@1¾ per cent. and discount at 3¾@3⅞ per cent. The Bank of France showed a loss of 500,000 francs in gold. Its rate is still 3½ per cent., the Paris market quotation being 3¼ per cent. At Berlin the bank rate is 5½ per cent. and the market 5¼ per cent.

The imports and exports of merchandise for August and the eight months ending therewith compare with the same periods of the two preceding years as follows:

August	1905	1906	1907
Imports—Free of duty	$39,782,642	$43,939,223	$56,288,499
Dutiable	56,048,516	61,757,792	69,503,657

New York Securities Market.

While more or less irregularity prevailed this week in the movements of stock prices at New York, the tendency of the market, so far as the prominent railroad issues were concerned, was, on the whole, in the direction of an improvement. While there were further adverse developments in the copper situation, embracing cuts in quotations for the metal by the leading producers, bringing them down to the neighborhood of 16 cents per pound, with lower prices reported elsewhere, together with an announcement that the subsidiary companies of the Amalgamated had decided to curtail their output by 50 per cent., the weakness of Amalgamated and its subsidiaries was by no means as pronounced as heretofore, and had but little effect upon the list. The commencement of the hearing in the government's suit to bring about a dissolution of the Standard Oil Company, although it has already brought to light many interesting facts about that organization, also seemed to be disregarded as a market factor. Indeed, the market, while it continued to be a highly professional affair, seemed to reflect the presence of renewed support from large interests, and among the rumors which met with attention was one to the effect that the Morgan party and others of similar importance had adopted a bullish attitude, having apparently concluded that the fall in securities had already discounted the political agitation and other unfavorable elements. A circumstance which was not without influence of a favorable nature was the continued advance in the New York City 4½ per cent. bonds, which sold up to 106⅝, the impression being that renewed investment buying was responsible therefor. Attention was also attracted to the strength of the Union Pacific convertible 4s, in spite of the fact that the underwriting syndicate for that issue has just been dissolved. The bond market as a whole, while it was not active, exhibited a better tone, and dealers in such securities are generally reported as being much more hopeful for a resumption of buying of investment securities by the public.

The chief feature of the week was the activity of the Hill stocks, under the lead of Northern Pacific. In spite of official denials there continues to be much discussion about the prospect for an extra dividend, while the buying of Northern Pacific carried the price up to 133½, Great Northern exhibiting corresponding strength, though in a less degree. Union Pacific was another feature, having excellent support, which seemed to be directed against the short interest in it, although it was hinted that the movement in this stock might be connected with efforts to make a market for the convertible bonds. Reading also developed strength, and was helped by the publication of the annual report, which showed about 12 per cent. earned on the common shares prior to deductions for improvements, and about 8 per cent. after the latter items had been charged off. The declaration of the regular 1½ per cent. dividend on New York Central had a good effect on that security, and the Atchison stocks also received support. The publication of Chairman Gary's conservative, though reassuring, interview regarding steel trade conditions and the position of the United States Steel Corporation was followed by a moderate recovery in the Steel issues. The copper stocks, as was natural, continued weak, Amalgamated selling down to 58 and rallying to 62, after which it continued to be very variable, which was also true of Anaconda, American Smelting and others of the same class. The traction securities were comparatively neglected, and the minor industrials simply followed the course of the leaders without developing any special activity.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,739,836	2,895,020	1,041,696
August 8	3,272,993	2,262,961	865,002
August 15	2,947,433	2,827,954	1,068,519
August 22	3,565,347	3,196,375	1,170,340
August 29	3,808,866	5,081,999	1,429,250
September 5	2,923,710	2,466,032	1,194,215
September 12	5,291,866	4,953,216	1,682,404
September 19	4,340,854	4,677,522	2,178,428
Largest exports in 1907, week ending Sept. 12			5,291,866
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with September 14 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
Sept. 14, 1907	304,727	4,890,496	4,864,117	6,258,378
Sept. 7, 1907	318,103	4,525,490	3,416,580	6,355,545
Sept. 15, 1906	450,887	6,339,385	5,084,838	4,468,250
Sept. 16, 1905	413,132	6,090,212	4,137,286	5,320,409
Sept. 17, 1904	348,681	5,648,089	5,468,508	5,050,285
Season				
July 1 to Sept. 14, 1907	3,559,031	52,685,680	34,028,721	40,830,026
July 1 to Sept. 15, 1906	4,510,151	59,764,502	34,844,807	46,393,536
July 1 to Sept. 16, 1905	3,851,957	55,199,970	40,042,973	50,818,078
July 1 to Sept. 17, 1904	3,487,829	50,069,290	34,735,632	46,242,632

Fluctuations in American Wheat Stocks.

Increases and decreases of available wheat stocks, United States and Canada, east of the Rocky mountains, with revised comparisons for two preceding years:

Week ending	1907	1906	1905
July 6	—660,000	—1,279,000	—1,337,000
July 13	—18,000	—277,000	—1,021,000
July 20	—1,554,000	+3,063,000	—293,000
July 27	+93,000	+4,316,000	+2,250,000
August 3	+286,000	+1,578,000	+1,239,000
August 10	+1,649,000	+3,183,000	+1,092,000
August 17	+682,000	+1,894,000	+1,642,000
August 24	+2,406,000	—205,000	—303,000
August 31	—2,356,000	—2,003,000	—860,000
September 7	—2,056,000	+1,475,000	—2,049,000
September 14	—2,632,000	+3,196,000	+1,873,000

Corn Exports, in Bushels.

[Special to BRADSTREET'S.]

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Sept. 13, 1907	Sept. 6, 1907	Sept. 14, 1906
American	1,304,101	1,288,016	920,000
Other kinds	894,179	923,348	832,000
Total	2,198,280	2,211,364	1,752,000

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Sept. 13, 1907	Sept. 6, 1907	Sept. 14, 1906
Great Britain and continent	1,275,000	1,310,000	784,000
Egypt	20,000	23,000	27,000
India	485,000	509,000	565,000
United States	418,000	369,000	376,000
Total	2,198,000	2,211,000	1,752,000

Boston Shoe and Leather Market.

General conditions remain practically unchanged. Makers of side leather are not holding firmly to quotations, and concessions are reported from time to time. Splits have eased off some, but are now holding their own. Sole leather is firm. Hides have steadied, further concessions being firmly refused. Buyers are taking receipts about as fast as they arrive, and further accumulation has been checked. Shoe manufacturers are receiving late orders, and factories are running at normal capacity. Orders now received are very urgent. The amount of business in sight is not above the average, and the season will probably be short. Shipments are better than last week, but fall behind those of a year ago. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 93,450 cases; preceding week, 80,066; last year, 96,032; total for 1907, 3,483,299; total for 1906, 3,634,078; decrease, 150,779.

Wool Markets.

With the improvement in the financial situation and the consequent easing of money rates, actual and prospective, demand for wool from the manufacturers has increased greatly, and during the past week large sales have been made, with others pending, some of the largest mills buying freely. The position of the market is now very strong, with prices holding firm here and abroad. It is stated that the leading local houses have sold from 50 to 70 per cent. more wool than at this time last year, and that the aggregate of the sales during the past ten days or so has been larger than at any time since the new clip came on the market. Worsted wools are still in best demand, but there is a steady improvement in demand for clothing wools. All grades of wool are selling, both graded and in the original bags. Among the sales of the week were large lots of Montana in the original bags at 25½@26½ cents, Idaho in the original bags at 24 cents, fine staple Idaho at 25 cents, fine staple Montana at 26 cents, Colorado and New Mexico at 21½@23 cents, Wyoming three-eighths blood at 27 cents, clothing Idaho at 22 cents, and quarter blood territory at 26 cents. Fleece wools are in small supply still, recent sales including Ohio fine washed delaine at 38½ cents, Ohio unwashed delaine at 32 cents, three-eighths blood Michigan at 32 cents, half blood Michigan at 32@33 cents, half and three-eighths blood Ohio at 33@34 cents, Michigan quarter blood at 30 cents, Ohio quarter blood at 31 cents, XX Ohio at 34½ cents, and fine unwashed Ohio at 27 cents. Staple Oregon wool is well sold up at 23½@24 cents, with clothing Oregon at 20@21 cents, and valley No. 1 Oregon at 25@26 cents. Texas wools are in small stock, eight months having sold at 23 cents for small lots. Fall Texas wool is opening at 20@21 cents. New California wools are being sampled freely, but very little have arrived as yet. Scoured territory wool sold at 68 cents for fine and 64@65 cents for fine medium. Owing to the firm markets abroad, there has been more inquiry for foreign wools, New Zealand crossbreds, 50s to 56s, having sold during the week at 42 cents, with 40s to 44s at 40@41 cents, in fair-sized lots. There is very little interest in the London sales, which will open September 24, owing to the small selection suitable for this country, and the offerings will be very small, amounting to but 90,000 bales. Both the English and continental markets are very firm, and it is expected that fine merinos will open about 5 per cent. higher, with crossbreds unchanged. Australian markets are very firm, and keen competition is expected at the Melbourne sales, which will open October 8, with large purchases for this country, as many Boston buyers will be in attendance.

WESTERN FARM MORTGAGES.

"While the west is exceedingly prosperous, and while it unquestionably has larger resources than at any time in its history, it is, nevertheless, a heavy borrower," says *Bond and Mortgages*. "A single insurance company has over $100,000,000 loaned on western farm mortgages. Another insurance company has practically $50,000,000 similarly invested. Thousands of mortgage loans are recorded in every western state outside those that are held by institutions like these. This means that there is a vast amount of indebtedness yet in the west. In addition to this class of loans, it should be remembered that the banks, with their tremendous deposits, are also loaning from 50 to 75 per cent. of the money in their hands to the people of their respective communities. The interest on all this vast indebtedness is being made out of the earnings of the capital. While some of the indebtedness is being paid off, other obligations are being incurred, until it is probable that the west owes to-day as much money as at any time in its history.

"The probabilities are, too, that it will continue to be a heavy borrower, for any section of a country that grows and develops rapidly must utilize borrowed capital. It is very easy to make offhand generous assertions regarding the situation in the grain states of America; the proof is far less easy to obtain than in a financial or industrial center where clearing houses and business associations make the records complete and formal. But all the time the demand for capital continues, and the fact that just who is doing the borrowing and just how much is the amount of the loan does not lessen the fact that the community is using a great deal more capital than it owns. It is out of this situation that the investor who looks for securities based on western real estate should find encouragement. There is little likelihood that a less demand for farm loans will be noted in ten years from now than exists to-day. The location will probably be changed. Some of the older communities that are now taking a great deal of eastern money will be able to supply the local demand largely from the savings of the people themselves.

"But while they are doing this, other new sections are being opened and new enterprises are being undertaken to such a notable extent that there can be little falling off in the total demand. The probabilities are that the size of western farms will materially decrease in the next decade. The systems of intensive farming that are being adopted by intelligent westerners will make it possible to support a family on a much smaller area than at present. It will be found that it is true economy to use as little soil as possible, rather than as much as possible. To accomplish this, and to bring the smaller holdings up to a high measure of fertility, will mean the use of a great deal more capital than the west now possesses."

INDIA'S TEA AND COFFEE CROP.

Consul E. H. Haldeman, of Bombay, writes that the cultivation of tea in India commenced in the year 1835 in the province of Assam. He continues: "Since beginning, the industry in India has made a steady and remarkable growth. In 1885 71,525,977 pounds were produced, while the last government report shows that in 1906 the production was 240,849,894 pounds. In 1906-07 the total exports of Indian tea amounted to 236,731,623 pounds, an increase of more than 18,000,000 pounds over the previous year. Of this amount, the United Kingdom took 176,343,075 pounds, or 75½ per cent. of the total; Europe, 15,990,656 pounds; Africa, 1,324,364; America, 16,266,000, of which 14 493,701 went to Canada; Asia, 14,369,051; Australia and New Zealand, 9,498,836; Burma, 638,033, and the remainder, 2,299,808 pounds, was shipped by rail to inland Asian points. Over 12 per cent. of the exports to the United Kingdom are reëxported to Europe and America. Throughout the last five years the percentage of the Indian tea crop sent to the United Kingdom has steadily diminished, while the direct exports to other countries have increased in the same proportion.

"The average prices obtained for the three principal grades of Indian tea at the auction sales in 1906 showed a substantial improvement over the previous two years, being 12 2-3 cents, 10 7-12 cents and 8 7-10 cents per pound respectively. The number of persons employed in the industry in 1906 is returned at 489,087 permanently employed and 81,626 temporarily employed, making a total of 570,713 persons, or about one person to an acre.

"The production of coffee is practically confined to southern India in the elevated region above the southwestern coast, the coffee lands of Mysore, Coorg and the Madras districts of Malabar and the Nilgiris comprising 86 per cent. of the whole area under cultivation. About half of the whole coffee-producing area is in Mysore. At the end of 1906 there were 210,688 acres of land under coffee. In Mysore there were 101,498 acres, while in Coorg there were 46,393 acres and in the Nilgiris and Malabar about 32,500 acres. Some coffee is grown in other districts in Madras, principally in Madura, Salem and Coimbatore, and in Travancore and Cochin. It is also grown on a very restricted scale in Burma, Assam and Bombay.

"Statistics relating to coffee production in India are admittedly inaccurate, and estimates of yield are generally so far wrong in all the provinces and states that adjustment of the details is impossible, and the figures can therefore only be taken as approximately correct. It is almost impossible to state what the production really is, as the figures reported for the last ten years have always been lower than the amount exported. For example, the reported production for 1906 was 17,695,312 pounds, while the exports amounted to 25,546,528 pounds, a large decrease from previous years owing to unseasonable rains. The two chief markets for Indian coffee are the United Kingdom and France. In the last year the former took 9,224,096 pounds and the latter 10,695,216 pounds.

"India heads the list of countries supplying the United Kingdom with coffee, and stands second in regard to France, which obtains its chief supplies from South America. It is remarkable that no Indian coffee went direct to the United States, which consumes one-half the total quantity of coffee exported from all the countries of the world. A considerable quantity of coffee is consumed in southern India, but no statistics are available. Prices have fallen steadily during the past decade from $24.47 per hundredweight in 1894–95 to $14.17 in 1906–07, or 58 per cent."

WHAT VESSEL TONNAGE MEANS.

The Boston *Transcript* remarks that "a new Atlantic leviathan arrived at New York the other day, and newspapers and people straightway began to compare the 20,000 'tonnage' of the Kronprinzessin Cecille with the 'tonnage' of giants which had come out before and are to come out after her. The vocabulary of the sea, always bewildering to landsmen, is indeed crowded full of strange, technical jargon and of words of familiar meaning on shore which, afloat, contract a new and arbitrary significance. Take, for example, this matter of tonnage or shipping. On shore everybody knows that a ton is two thousand pounds, if a short ton, or 2,240, a long one. Therefore, it seems to the landlubber that a one-thousand-ton ship ought to be, if it is not, a ship which can carry a thousand tons' weight of cargo. As a matter of fact, a thousand-ton ship can probably convey about thirteen or fourteen hundred tons of coal or heavy merchandise.

"Yet the tonnage of shipping is not so arbitrary as it seems. It follows a fixed standard, established by national law. There are two kinds of tonnage recognized by our government authorities—gross tonnage and net tonnage. The gross tonnage of a vessel is its entire internal capacity measured in tons of one hundred cubic feet—and the navigation laws of the United States prescribe in careful detail how this measurement for tonnage shall be ascertained. Net tonnage is measured by subtracting from the gross tonnage of a vessel all space used for the accommodation of officers and crew, for certain gear for the working of the ship, and, if a steam vessel, for her propelling power or machinery, including boilers and engines. In other words, the net tonnage of a ship is virtually the space, expressed in tons of one hundred cubic feet, available for the carrying of passengers or cargo. In the case of sail vessels, from which no machinery space has to be deducted, the gross tonnage and net tonnage of a vessel are very nearly the same; but in steamers the two measurements are widely different.

"In all, or nearly all, of the ports of the world ship taxes or dues are based upon tonnage—in the United States upon net tonnage. This is also the standard of tolls for the Suez canal. As a result, the effort of naval architects and shipbuilders, and shipowners generally, is to keep the net tonnage of a ship as small as possible, and many ingenious devices for 'cheating measurement' have been adopted—designers of merchant vessels being as adept in this art as designers of racing yachts. But the navigation laws of the United States are exceedingly vigilant on this point, and are regarded as fair and reasonable in their requirements, so that this evil of fraudulent tonnage is believed to be less serious under the flag of the United States than in the merchant navies of some other countries.

"Landsmen may well be pardoned for their perplexity that tonnage, in the vernacular of the sea, should mean sometimes one thing and sometimes another. The Navy Department adds to the inevitable confusion by describing our ships-of-war in terms not of gross register or net register but of displacement. Thus the Massachusetts is spoken of officially as a battleship of 10,300 tons, and the Vermont as a battleship of 16,000 tons. This means, in each case, that the ship displaces so many tons of water. But the Massachusetts, if measured as merchant vessels are measured, would have a net tonnage of only 3,204, and would have to pay dues on that only if passing through the Suez canal. This practice of the Navy Department of using displacement tonnage instead of net tonnage gives the public an exaggerated idea of the actual size of our ships-of-war.

"These national measurements of shipping, though apparently arbitrary, are indispensable; for ships cannot be classified with any exactness on the basis of the tons of cargo they will actually carry. A ship which could receive and transport safely 5,000 tons' weight of pig iron would not hold 5,000 tons of hay or cotton. Therefore, the governments of the world have had to prescribe measurement standards of their own, in which the great marine insurance companies have had a powerful hand. And the tendency is to bring these standards into more and more complete conformity."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 28, 1907.

It is a circumstance not without interest, as illustrating the change which has come over the external relations of the United States in recent years, that two of the most important members of the present Cabinet are at this time traveling upon missions which bring them beyond the continental boundaries of the republic. We refer to the Secretary of State, Mr. Root, who has this week begun a journey to Mexico, and Secretary of War Taft, who is now on his way to the Far East. Both of these statesmen have traveled more or less extensively during the course of their public service. Secretary Root made a notable trip to South American countries last year, while Secretary Taft has spent a considerable time in our Philippine possessions, not to mention trips to Panama and elsewhere. There is little doubt that the able and genial Secretary of War will be received with marked honor in the course of his journey through foreign lands, none the less so because of his position as a political quantity in his own country, while the visit of the Secretary of State to the neighboring republic will be in many ways memorable. The travels of these distinguished statesmen are, we repeat, significant of a new era in the country's development, and it is to be hoped that their trips will be as pleasant to themselves as they may be expected to be profitable to the country.

It is pretty generally understood that the constitution adopted at the election in Oklahoma last week is not an agreeable document to the President, and there has been some more or less loose talk to the effect that he might refuse his approval of the instrument. All talk of that sort has, however, been set at rest by a statement made by the President on Thursday, to the effect that he would give the new constitution his official approval. He has examined the document with reference to the provisions of the enabling act, which conferred upon the Executive discretion to determine whether the constitution is in accord therewith, and insures to the new state a republican form of government. As the result of this examination he has found no insuperable ground for refusing his approval, though he does not conceal the fact that the provisions of the document adopted by the people of Oklahoma are not in accord with his personal views. He may make a more definite statement of his position in the matter before his departure for the west.

At a plenary session held on Saturday last the Peace Conference unanimously adopted a resolution recommending to the powers the convocation of a third conference within a period similar to that which elapsed between the former conferences, leaving the exact date to be fixed in common accord by the powers. The resolution calls the attention of the powers to the necessity of having the work of the conference prepared a sufficient time before its meeting, so that its deliberations may be made with the necessary authority and rapidity. In order to attain this object, the resolution urges that about two years before the probable date of convocation a preparatory committee be intrusted by the governments with the collection of the different propositions to be submitted to the conference and the gathering of matters capable of being embodied in international regulations, and, further, that the committee be instructed to prepare a programme about which the governments will agree early enough to have it earnestly studied in each country. In addition, the recommendation is made that the committee be authorized to propose a system of organization and procedure for the conference.

This is, doubtless, the most that could be gained from the conference by those who aimed at securing a continuance of the work initiated at The Hague in 1899. At the same time disappointment is felt at the failure of the conference to declare in favor of a periodically recurring gathering of the kind which has now met twice within a decade. A provision of that kind was, it is understood, made a feature of the proposition as originally framed, but it was amended in its passage through committee so as possibly to prevent a failure of adoption in the plenary assembly. What will come of the resolution in the future remains to be seen. Much must, of course, depend upon the attitude toward the plan of the larger powers. If the pressure of public opinion can be brought to bear upon them in a direct and forcible way in aid of periodical sessions these may be ultimately arranged, but it is likely that the governments of the more important countries to-day feel that they could accomplish much more important results by action among themselves than can be reached in concert with the smaller powers. The abstention from voting of some of the powers, such as Russia and Japan, upon the question of an international prize court, by the way, seems to render somewhat problematical the success of the proposal to establish such a tribunal.

In a case which has been decided within the week by the United States Circuit Court of Appeals at Denver, Col., and which originated in a prosecution against the Great Northern Railway Company for granting rebates on carload shipments of corn and oats from Minneapolis, Minn., to Seattle, Wash., the railroad company contended, among other things, that the Elkins act of 1903 making it an offense to grant rebates was repealed by the Hepburn act of 1906 in such a way that thereafter there could be no prosecution of offenses committed prior to the passage of the latter law. This contention is negatived in the decision rendered by the Circuit Court of Appeals. That tribunal holds in effect that the Hepburn law is an amendatory and not a repealing act; that in so far as it repeats or reproduces portions of the Elkins law, it continues them in force and makes no break in the legislation, and that in so far only as it omits or changes provisions of the Elkins act does it repeal them. It is understood that this decision, which affirms a judgment of the Federal District Court, will affect materially the disposition of a number of other cases of importance.

Uniform laws for savings banks in the several states were advocated in several addresses before the savings-bank section of the American Bankers' Association, which held its meeting the day before the general body convened. It was suggested by one speaker, Mr. William R. Creer, of Cleveland, that there should be a law in every state exempting savings deposits up to a reasonable amount from taxation, and that a rigid uniform law regarding the investment of funds was also a prime necessity; in fact, that many important matters involved in the management of savings institutions might be covered by a proper uniform enactment. Another speaker, Mr. William Hanhart, of New York, dealing with the same general subject, urged that as many national banks had savings departments conducted with the permission of the Comptroller of the [illegible]y, the savings therein deposite[illegible] safeguarded by national reg[illegible]. In another paper read before the section the suggestion was made that a committee be appointed to consider the desirability of a government savings-bank commission, and the scope of the powers of such a body. It may be noted that one of the papers read antagonized the notion of savings-bank insurance as being without the proper field of savings-bank business.

Additional information regarding the recently signed Anglo-Russian treaty seems to indicate that its provisions respecting Persia are limited to the regions of that country contiguous to the frontiers of Great Britain and Russia in Asia. Attention is attracted to this feature of the convention by a letter of the British Foreign Secretary, Sir Edward Grey, in which it is pointed out that as the Persian Gulf is not a part of the regions referred to, it was not considered necessary to introduce into the treaty a positive declaration with respect to Great Britain's special interests in the gulf, which are an outcome of British action in those waters for more than a hundred years. The letter announces that the British government will continue its direct efforts for the preservation of the status quo and the maintenance of British trade in the Persian Gulf, though it does not desire to exclude the legitimate trade of any other power. Some significance is attached to the publication of this letter at the present time, when, as may be noted incidentally, Russian diplomatic activity is being manifested in north Persia.

Rumors of a somewhat disquieting nature have come lately from Cuba. Last week it was reported that the administration at Havana was somewhat apprehensive regarding an unwonted degree of activity which appeared among the negroes in Pinar del Rio recently, simultaneously with the occurrence of conflicts between the rurales and bandits. It is difficult to form any estimate of the extent of the trouble apprehended by the authorities, but it is learned that there has been some talk of a rising in Pinar del Rio: that there has been some concealment of arms and ammunition by persons suspected of being concerned in a plot against the government, and that certain persons who have heretofore been connected with disturbing movements of one kind or another have recently made their appearance in Cuba after a period of exclusion. The administration at Havana is well aware of the conditions confronting it and is believed to have the situation well in hand.

THE BANKERS IN CONVENTION.

Judging from the statistics of membership presented by the president of the American Bankers' Association in his address opening the thirty-third annual convention at Atlantic City this week, that body continues to grow in a very satisfactory way. The number of members increased from 7,949 in 1906 to 9,251 in 1907, a gain, as will be seen, of 1,302 members in a year. It is noted with no little interest that, considering the location of the convention this year, the attendance of members from the south and west has surpassed expectations. The general feeling of the delegates, as reflected in both official and individual outgivings, is one of confidence, and it may be noted that none of the members who have spoken as to the outlook have voiced this feeling with more distinctness than those from the south and west. In its report the executive council, speaking through Chairman George M. Reynolds, said that the prosperity of the United States has been so great, and the demands for money to carry on business have become so large, that the country is suffering from a money stringency, and may be said to be "starving in the midst of plenty." The hope was expressed in the report that the discussion of the currency question would result in the adoption of some plan of legislation which the convention could recommend to Congress for enactment into law.

Pending the presentation of the Currency Commission's report, which was delayed until the second day of the convention, several other matters of interest engaged the attention of the delegates. The protective committee reported that notwithstanding the increase in membership, proportionally fewer crimes were perpetrated against the members of the association during the last year than in any previous year since the protective work was inaugurated. The statistics gathered appear to show that the banks selected for attack are usually those outside of the association. The committee on express companies reported that assurances had been given that the Interstate Commerce Commission will at an early date hear the case to determine whether express companies are entitled to do a banking business. The committee on bills of lading reported, through Chairman Lewis E. Pierson of New York, that the measures framed by the committee were not pushed in Congress owing to the shortness of the session, but that they had served a good educational purpose. The committee is earnestly working for the adoption by the Interstate Commerce Commission of the changes suggested by the committee in the draft of the proposed uniform bill of lading now before the commission, and the enactment of the proposed amendments to the rate bill. In the meantime the committee suggests that bankers and merchants advancing value upon bills of lading look to the standing and strength of their customers or shippers rather than to any supposed security in the bill of lading itself. The committee on municipal securities urged the need of better safeguards for such issues, and reported that it had found the matter one of growing interest and increasing difficulties.

A feature of the first day's session was the address of Herr Leiffmann, of Düsseldorf, Germany, in advocacy of the establishment of a central bank in the United States. Referring to the marked interest shown by Germany in the development of the United States and in the condition of its money markets, he expressed the opinion that this country is in need of an extension of its circulation, which can only be reached through the creation and extension of the use of commercial bills of exchange and through the establishment of a bank of banks; in other words, a clearing house of clearing houses. In his enumeration of the difficulties in the way of the creation of such an institution he showed a clear appreciation of existing conditions, but he declared that the will and power to establish such a bank lie dormant in the country. In his view, the competition against existing banks which is apprehended in some quarters is the greatest obstacle in the way of the establishment of a central bank, but this, he said, may be avoided if the institution is established at first, or forever, as a bank of the banks, which institutions will form a link between the public and the central bank. The establishing of a central bank would, Herr Leiffmann added, tend to increase largely the circulating medium of the country, for if in the United States there were a central reserve bank the national banks would not be required to lock up such enormous sums of cash in their vaults, but would deposit the same with the central reserve bank, which would then be privileged to issue its notes against these deposits.

The report of the Currency Commission was presented on the second day of the convention. As summarized by Chairman A. Barton Hepburn of New York, the plan recommended in the report contemplates that any national bank having been actually doing business for one year and having a surplus fund equal to 20 per cent. of its capital shall have authority to issue credit notes as follows, subject to rules and regulations to be determined by the Comptroller of the Currency: (*a*) An amount equal to 40 per cent. of its bond-secured circulation, subject to a tax at the rate of 2½ per cent. per annum upon the average amount outstanding. (*b*) A further amount equal to 12½ per cent. of its capital, subject to a tax at the rate of 5 per cent. per annum upon the average amount outstanding in excess of the amount first mentioned. It is also recommended that the same reserves shall be carried against credit notes as are now required by law to be carried against deposits.

In advocacy of the plan proposed, Mr. Hepburn said that it provides a 5 per cent. guarantee fund from which to redeem the notes of any defaulting bank, with numerous redemption cities conveniently located in various parts of the country, and that by basing, as it does, the amount of the proposed issue of credit currency upon the bond-secured currency of each bank, the value of government bonds now so largely held by the banks is preserved and protected. The proposed plan, he added, is neither comprehensive nor radical; it seeks to engraft upon existing laws simple changes which will admit of increased bank note circulation in response to the increased demands of business which accompany periods of activity, and it also contemplates the retirement of such circulation with the abatement of such demands. The proposed plan was antagonized in a vigorous way by Mr. Henry W. Yates, of Omaha, Neb., who denounced it as revolutionary, and by Mr. Andrew J. Frame, of Waukesha, Wis., who characterized it as in effect proposing a return to eighteenth century fiatism. After a brief reply to Mr. Frame by Mr. John Perrin, of Indianapolis, and an address in favor of the commission's plan by Congressman Fowler, of New Jersey, chairman of the House Committee on Banking and Currency, between whom and Mr. Frame there was a running fire of debate, the convention voted to approve the report of the commission, and to continue that body with power to add to its number if deemed advisable. The real discussion upon the proposition will, of course, come when the matter is brought before Congress.

THE DETAILED NATIONAL BANK RETURNS.

Considerable light is thrown upon the position of the national banks of the country by the full report of their condition on August 22 to the Comptroller of the Currency, which made its appearance this week. Giving, as the completed document does, the figures of those institutions according to their geographical groups, it affords an explanation of some of the peculiar features of the figures for the whole country, which appeared in detail in these columns last week. At the same time the statement exhibits some additional peculiarities which have made the document the object of not a little discussion. The comparison of the principal items — loans, cash and individual deposits—on August 22, 1907, with the corresponding figures as shown on September 4, 1906, is as follows:

LOANS.

	Aug. 22, 1907	*Sept.* 4, 1906	*Increase*
Number of banks	6,544	6,137	407
New England	$436,744,905	$419,264,771	$17,480,134
Eastern	1,786,760,076	1,715,222,127	71,537,949
Southern	557,050,515	480,825,796	76,224,719
Middle western	1,350,690,110	1,212,873,143	137,816,967
Other western	305,806,928	259,411,075	46,395,853
Pacific and island possessions	241,531,434	211,386,403	30,145,031
Total, U. S.	4,678,583,969	4,298,983,316	379,600,653
New York City	712,121,058	702,051,036	10,070,023

SPECIE AND LEGAL TENDERS.

	Aug. 22, 1907	*Sept.* 4, 1906	*Increase*
New England	$42,187,703	$38,651,117	$3,536,586

Total, U. S.	701,623,533	626,012,410	75,611,123
New York City	218,756,132	199,227,957	19,557,174

INDIVIDUAL DEPOSITS.

	Aug. 22, 1907	*Sept.* 4, 1906	*Increase*
New England	$380,428,611	$378,539,475	$1,889,136
Eastern	1,633,728,046	1,716,630,046	*82,902,000
Southern	478,882,272	425,442,534	53,439,738
Middle western	1,203,910,887	1,122,132,851	81,778,036
Other western	354,992,459	311,036,208	43,956,251
Pacific and island possessions	267,093,127	246,157,192	20,935,935
Total, U. S.	4,319,035,403	4,199,938,310	119,097,092
New York City	532,034,607	659,198,930	*126,564,323

* Decrease.

The very large gain in loans of $379,600,653 assumes a different appearance now that it is seen that the principal expansion in this item was in the middle western group, the banks in the southern states also displaying a notable increase, these two sections between them being credited with an increase of $184,212,820, while the national banks of the far west, with a gain of $46,395,853, bring the total of these groups up to $260,437,539, or 68 per cent. of the entire increase. Another noticeable feature is that the eastern group shows an increase of only $71,537,949, while New York City displays a gain of only $10,070,023. As against the enormous increase in the loans of the western banks their gain in cash is, however, only $19,426,312, the southern group being even more badly off in this respect, with an increase of but $7,116,364. In respect to deposits, however, the middle western group reports a gain of $81,778,036, the gain by the southern group being $53,439,738.

A variety of explanations have been put forth for the showing made by the western and southern banks in connection with loans. The most plausible view which can be adopted in that regard has reference to the increase in the number of banks. Within the year covered by the figures 407 new banks were added to those in existence at the time of the report of September, 1906, of which no less than 301 were located in the west and south. It would, therefore, seem entirely reasonable to conclude that the new national banking institutions of those sections have lost no time in lending to the full extent of their resources. Another interesting query is, however, suggested by these figures, namely, whether western banks have not loaned considerable money at the eastern centers, the idea being more or less borne out by the circumstance that the increase in the loans of the New York City banks, taken alone, is only $10,000,000, while they furthermore exhibit a decrease of $126,564,323 in their individual deposits, the decrease in the same item for the eastern group being $82,902,000. The latter change is therefore evidently due to a shrinkage in the deposits of the national banks at New York City. At the same time it must be borne in mind that the national banks of New York cannot, by themselves, reveal the true financial position at the metropolis. Adding to their loans those of the trust companies gives a total for these two classes of institutions of nearly $1,400,000,000. In other words, the loans of the trust companies in Greater New York nearly equal those of the national banks, and if the same item for the state banks were included, these two classes of institutions would evidently make a greater showing than that of the national banks.

On the whole, the figures of reserve make a favorable impression and show that the national banks as a whole are in a stronger position than they were a year ago. This is confirmed by a comparison of the percentage of reserves on August 22, 1907, and on September 4, 1906, at the reserve cities, and also in the case of the different groups:

PERCENTAGE OF RESERVE.

	Aug. 22, 1907	*Sept.* 4, 1906
New York City	26.81	24.36
Chicago	25.34	24.54
St. Louis	23.59	24.06
Central reserve cities	26.18	24.37
Other reserve cities	25.46	24.52
All reserve cities	25.79	24.45
"*Country banks*"—		
New England	17.19	16 53
Eastern states	16.61	16.26
Southern states	17.69	17.67
Middle western states	16.44	16.43
Western states	16.81	16.85
Pacific states	17.72	17.81
Island possessions	34.53	39.15
Country banks	16.88	16.71
United States	21.33	20.70

It must be admitted, however, that the before-mentioned expansion of loans by the western banks is calculated to create some misgiving, permitting, as it does, the inference that they have extended their credits to the extreme, so that any real setback in business might have a more or less disturbing effect in that quarter.

LOW BOND PRICES.

It has already been pointed out in these columns that something of a change for the better is discernible in the sentiment of the bond market at New York, even though the actual demand for investments of that nature has not assumed an aggressive form. As was noted last week, the success of the New York City 4½ per cent. bond issue has, however, had a tendency to draw attention to bonds, which has been increased by the active market which promptly developed for the issue. It is true that the rapid rise of the city 4½s of 1957, which at the end of last week touched 107½, as against an average price of around 102 in the allotment, was attended by a good deal of speculation. This fact was revealed by a sharp break in the quotation on last Monday to 106¾, but that the movement rested mainly upon purchases for investment was shown by the prompt way the price soon rallied to around 107½. In the main, the New York City bond transaction and the subsequent developments have been healthful in their effect, and have also served to draw attention to the comparatively low prices at which bonds of a good quality have been selling in the market.

Several factors have coöperated to bring about the lowering of quotations for such issues, and the consequent increase in the rate of interest which they return upon the money invested in them. High rates in the money market would, in a measure, account for this, especially as there does not appear to be much reason to doubt that time money is not likely to be lower during the balance of the present year. The agitation against corporations has also induced timidity in respect to bond purchases, although it is to be considered that whatever may be the result of the political situation in its bearings on corporations, the bonds of such organizations as a class may be considered safe in respect to interest and principal. Besides this, however, the enormous amount of new bonds which have been emitted in the last year have oversupplied the market and contributed as powerfully as anything else toward creating the low level of bond quotations.

A very striking illustration of the recent condition in the bond market is afforded by contrasting the prices and income yield at the high figures of 1906 with those which have prevailed of late. The accompanying tabulation of these figures in connection with sixteen of the prominent active bond issues dealt in at the New York Stock Exchange, giving their maturities, the high prices for each during 1906 and the lowest quotations they have touched during the present year, showing also the approximate per cent. of income they would return in each case, calculating interest to maturity, displays this in a way which can be readily appreciated:

As will be seen, in some cases the difference in the income return at this year's low quotation is from ¾ to 1¼ per cent. greater than that which they would have returned at last year's high prices. This difference is, of course, more marked in the case of bonds in which there has been more or less speculation. Still the rise in the income return is very marked and general, and it is not surprising that under such circumstances the advantages which the bond market presents for investors should be receiving attention to a greater extent than of late, which fact is indicated by the somewhat higher prices which have been reached since the beginning of the present month. This change for the better which has taken place in bond prices, and the consequent slight but general decrease in the income return, are shown in the final columns, the quotations being those of the last few days. While the advances are not large, they are substantial, though the yield upon bonds of a good quality, like those included in the table, is still sufficient to make them attractive to holders of capital.

	High, 1906	*Yield, per cent.*	*Low, 1907*	*Yield, per cent*	*Present prices*	*Yield, per cent.*

THE COUNTRY'S SECOND MANUFACTURING INDUSTRY.

Slaughtering and meat packing was, next to iron and steel, the most important manufacturing industry in 1900, judged by the value of product, and the bulletin issued this week by the Census Bureau, giving the results in that line for the year 1905, is naturally of great interest. The returns given in the bulletin are those only for the year 1905, but reference to the compendium of the census of 1900 allows of the following comparisons being made:

	1905	1900	1890
Number of establishments	929	1,134	1,367
Number of employees	74,134	69,441	44,812
Capital	$237,714,690	$190,705,927	$118,016,066
Wages paid	40,326,972	33,923,253	24,668,202
Materials	805,856,969	686,860,891	482,897,381
Product	913,914,624	790,252,586	564,667,035

There is here shown a total value of output in 1905 of $913,914,624, which is a gain of 15.7 per cent. over 1900. The cost of materials in 1905 was $805,856,969, a gain of 17.3 per cent. for the five-year period. In the same five-year period the number of employees increased by 7.2 per cent. and the wages paid increased by 19 per cent. The capital invested increased in the same time by 24.7 per cent. In view of the varying increases over 1900 here shown, and especially in view of the larger proportionate gain in the capital invested, it is significant of the changes involved in the industry of late years to learn that the number of establishments decreased by 18 per cent. In the ten years preceding 1900, it might be recalled, the number of establishments fell off by 17 per cent. It is interesting in this connection to learn that the value of products and of materials used is three times what it was in 1880, twenty-five years ago; also that in the past fifteen years there was a doubling of capital invested, with a gain of 70 per cent. in the number of persons employed, of 63 per cent. in the wages paid and of 62 per cent. in the value of product.

We learn further from this bulletin, what was of course hardly new, that Illinois is by far the leading state in the slaughtering industry, that state, while having only 7.3 per cent. of the establishments, reporting 33.9 per cent. of the capital, 36.4 per cent. of the wage earners, 36.1 per cent. of the wages paid and 34.7 per cent. of the products. Chicago is, of course, the country's leading slaughtering center, with a total output of $269,581,486, or nearly 30 per cent. of the whole value of products, followed by Kansas City, Kan., South Omaha and New York in the order named.

What the slaughtering industry calls for in the sacrifice of four-footed animal life may be gathered from the fact that 49,000,000 animals are cut up yearly, this including 31,000,000 hogs, 11,000,000 sheep and 7,000,000 beeves. This does not cover poultry and other animals, of which $13,000,000 worth were killed. The beeves cost about $289,000,000, the sheep about $44,000,000 and the hogs about $330,000,000. In addition, the establishments purchased about $53,000,000 worth of meat already dressed, and paid about $72,000,000 for other materials, including mill supplies and freight.

Fresh beef is the largest quantitative product of the industry, 3,748,055,377 pounds being produced, valued at $247,096,724. Salt pork, hams, smoked bacon, sides, shoulders, fresh pork and lard each exceeded 1,000,000,000 pounds in quantity. Between 1900 and 1905 the fresh beef quantity increased by 28.5 per cent., salt pork 13.7 per cent., lard 17.7 per cent. and fresh pork 2 per cent. The quantity of smoked hog products, on the other hand, fell off 22.8 per cent., and canned and salted beef also decreased in quantity. These changes, indicating the supplanting of the cured meats by the fresh article, are of interest as indicating that modern slaughtering methods, enabling the meats to reach the consumer fresh, have made for a marked and permanent change in the consumption and presumably in the tastes of consumers.

NET RAILWAY EARNINGS.

Last week our monthly report of railway gross and net earnings for July was not so comprehensive as it ordinarily is, owing to the fact that the returns of several important roads, the Union Pacific, Southern Pacific and Erie, for instance, were not then available. Since our last issue, however, the reports of these and other roads have appeared, and therefore we have revised the returns so as to include the additional reports. The ratios of increase in both items show little change from the figures set forth last week, the gain on gross for July this year being increased slightly, or to 16 per cent., on a total of $131,384,790, the actual increase over July, 1906, amounting to $18,206,178. On the other hand, the percentage of gain in net earnings displays a slight reduction, the revised returns indicating a gain over July, 1906, of only 5.4 per cent. on a total of $39,991,873, the ratio of increase in operating expenses having advanced to 21.4 per cent. The only noteworthy changes in the individual reports are the increase of $207,368 in the net receipts of the Erie Railroad Company and the loss of $79,398 in the net revenue of the Union Pacific.

Revised figures of gross earnings, operating expenses and net earnings for the month of July this year and last are set forth in the following table:

	1907	1906	*Inc., per ct.*
Gross earnings	$131,384,790	$113,178,612	16.0
Operating expenses	91,392,917	75,242,248	21.4
Net earnings	39,991,873	37,936,364	5.4

The above total of gross earnings, when segregated into group form, makes this showing:

	1907	1906	*Inc., p. ct.*
Northwestern	$9,104,431	$7,738,555	17.6
Central western	10,083,168	9,299,025	8.4
Trunk lines	33,522,814	29,322,862	14.3
Eastern	2,452,894	2,223,065	10.3
Anthracite coal	8,596,000	7,413,714	15.9
Southern	21,352,055	19,134,095	11.5
Southwestern	19,842,523	16,094,250	23.3
Pacific	26,430,905	21,053,046	20.8
Total	131,384,790	113,178,612	16.0

The gains noted above may be divided into three divisions, those above 20 per cent., those in excess of 10 per cent. and those below that ratio. In the first are the southwestern and Pacific roads, while the northwestern roads, the trunk lines, the hard-coal roads, the southern and eastern roads appear in the second, and only one group—the central western—is in the third.

Net earnings are set forth by groups in the following:

	1907	1906	*Inc., per ct.*
Northwestern	$2,553,964	$2,619,287	*2.5
Central western	2,776,622	2,737,823	1.4
Trunk lines	9,878,740	9,201,514	7.3
Eastern	794,814	775,282	2.4
Anthracite coal	3,363,058	2,973,890	13.1
Southern	5,131,524	5,015,853	2.3
Southwestern	6,375,384	5,600,108	13.8
Pacific	9,116,867	9,012,607	1.1
Total	39,991,873	37,936,364	5.4

* Decrease.

Three groups show gains of goodly proportions, the southwestern 13 8 per cent., the hard-coal roads 13.1 per cent. and the trunk lines 7.3 per cent. The other gains are those of 2.3 per cent. reported by the southern roads, 2.4 per cent. by the eastern roads, 1.4 per cent. by the central western and 1.1 per cent. by the Pacific. The northwestern group displays a loss of 2.5 per cent.

The trend of gross and net earnings for seven months of the calendar year are shown in the following table:

	Per cent. inc. Gross, 1907	*Net,* 1907
January	8.2	*2.4
February	7 7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
July	16.0	5.4

* Decrease.

The ratios of net earnings for the first three months reflect the influences of average weather conditions. The returns for the succeeding quarter show increases over a disturbed period in 1906, when the coal miners had suspended work. The increase of only 5.4 per cent. in July, 1907, is due in part to high operating costs, and in part to a new system of accounting that has been prescribed by the Interstate Commerce Commission.

IMMUNITY FOR THE CHICAGO & ALTON.

A matter of considerable interest growing out of the prosecution of the Standard Oil Company has been settled this week by Judge Landis in the United States District Court at Chicago. This is the question of the allowance of immunity to the Chicago & Alton Railroad for its connection with the granting of rebates to the Standard Oil Company of Indiana for certain transportation which was involved in the recent prosecution of that company.

The action of Judge Landis was based upon the request of Attorney-General Bonaparte communicated in a letter to the Federal Attorney at Chicago, which was read in court on Tuesday last. In this letter the Attorney-General instructed the representative of the Department of Justice at Chicago to inform the court that the department had most carefully considered and again reconsidered all aspects of the case and was unable to find any sufficient reason for other action on its part than was indicated in the Attorney-General's letter of August 10 last to Judge Landis, and which was referred to in the remarks of Judge Landis to the special grand jury on August 14.

In the interval, the Attorney-General said, the Department of Justice has again gone over the testimony of all the witnesses then in the employ of the Chicago & Alton Railroad Company who testified at the trial of the Standard Oil Company of Indiana, and, having so done, it reports that although the facts render such a scrutiny of the testimony as has been had clearly appropriate, and although some parts of the evidence are undeniably open to adverse criticism, the most perfect good faith requires the government of the United States to accord to the Chicago & Alton Railroad Company the privileges granted to an accomplice who becomes a witness for the prosecution. As to the nature and extent of those privileges, the Attorney-General cited the statement of Mr. Justice Clifford in the whiskey cases, to the effect that "the accomplice acquires only an equitable right to the clemency of the Executive, which, as Lord Mansfield said, rests on usage and the good behavior of the accomplice, who, in a proper case, will be bailed by the court in order that he may apply for the pardon to which he is equitably entitled."

Should it be objected, the Attorney-General continued, that the application may not be successful, the answer of the court must be, in substance, that given by Lord Denman on a similar occasion, that we are not to presume that the equitable title to mercy which the humblest and most criminal accomplice may thus acquire by testifying to the truth in a federal court will not be sacredly accorded to him by the President, in whom the pardoning power is vested by the Federal Constitution. In conclusion, the Attorney-General said that the Department of Justice had felt that its high regard for the court, and its sense of the importance and the delicacy of the inquiry requested of it by the order of August 14, forbade that this inquiry should be committed to any subordinate, however competent or trusted, and that the subject has therefore received throughout the personal attention of the head of the department. The Federal Attorney was instructed to move the court that the special grand jury be discharged from further consideration of the subject-matter, and this action was taken by Judge Landis, who instructed the members of the grand jury that they had no further duty to perform in connection with the Chicago & Alton Railroad, though the jury itself was not discharged, but was directed to investigate the conduct of other manufacturers. Judge Landis directed that a subpœna be issued for Mr. James Moffett, the president of the Standard Oil Company of Indiana, to appear next week and explain certain statements made in a public statement issued a short time ago, and which Judge Landis has been assured by counsel for the Standard Oil Company has never been seen by them. This hearing may result in some developments of interest.

THE ENGLISH COTTON GOODS TRADE.

Manchester, September 17. — Manufacturers of cloth are by no means well sold ahead. For several months there has been no free buying, and it is thought that the high level of values prevailing in July and August led to restricted operations. This week the great fall in cotton has assisted business. Offers from abroad previously refused have in several cases been accepted. Business for Egypt is practically at a standstill owing to the financial failures which have occurred in Cairo, and which have affected Manchester to a rather serious extent. Home trade goods are moving fairly well, on the whole, but there is nothing special in the demand.

China continues slow in her purchases of Lancashire calico. The shipments here, too, show so far this year a decrease of 55,000,000 yards. Stocks in Shanghai are running down gradually, and it is thought that sooner or later there will be some buying for that outlet. In the meantime India is absorbing largely. Bombay has taken this year 57,000,000 yards more than last year. The outlook in India is good, owing to favorable crops and the recent satisfactory monsoon. It is interesting to note that Canada has taken 18,000,000 more yards of cloth from us than in 1906, and West Africa 12,000,000 yards. The following is a comparative table of our total shipments:

	August, yards	*Eight mos., yards*
1907	538,836,500	4,308,836,200
1906	574,097,100	4,264,328,500
1905	560,318,600	4,076,229,300

Germany is importing yarns very extensively from us, her takings being this year, so far, double the weight of last year. Holland and Russia, as well as Austria, have also received much larger supplies than in 1906. On the other hand, there has been a falling away in the case of Japan and also of Turkey, as well as Burmah and Madras. Our spinners for export are very heavily sold for distant delivery, especially in fine numbers of Egyptian cotton. Many producers here for abroad are under contract for nearly twelve months. Users in Germany are so pressing for deliveries that a number of buyers have come over from that country to Manchester to see spinners personally about quick deliveries. This activity in our export section has strengthened the market, because home trade American yarns have been rather quiet and dragging during the month under review. Spinners of twist and weft for Lancashire consumption are not, on the whole, deeply under contract. Twist is in a better position than weft, but on an average the orders held by spinners are perhaps not more than three months' capacity. Yarns made from Egyptian cotton are very strong. Buyers all round have recently placed big orders, to follow on ordinary contracts. August was another big month in yarn shipments, as will be seen from the following comparative table for the last three years:

	August, pounds	*Eight mos., pounds*
1907	21,803,100	157,677,200
1906	17,789,200	140,241,400
1905	17,955,400	132,114,200

The feeling here in respect to raw American cotton is most uncertain. No estimate of the probable yield has yet been provisionally fixed in Manchester. The Washington reports of the crop, coupled with the ginning returns, are not much thought of. Spinners appear to have lost confidence in United States statistics relating to the cotton crop. Be these things as they may, Lancashire will need another big output of American cotton if her trade is to continue healthy and satisfactory. As to the Egyptian crop, a distinctly larger yield is estimated. Some authorities consider that the crop may turn out to be nearly 8,000,000 cantars, against 7,000,000 in the last season.

New mills are still being promoted; the latest list is that 3,800,000 spindles have yet to start work, and of this total the spindles to use American cotton are 2,622,000. Though textile machinery is very dear, mill floaters are very busy at work. It is noteworthy also that our shipments of textile machinery continue very large this year, as will be seen from the subjoined table:

	August	*Eight months*
1907	£655,228	£5,225,322
1906	535,232	4,272,002
1905	483,650	3,454,383

India, France, Russia and South America are the principal instances of increased imports. America also shows an increase, the figures being £427,000, as against £392,000 last year and £234,000 the year before. T.

EDITORIAL NOTES.

It had been quite generally expected that receivership proceedings would result from the present complications in the New York City railroad situation, and no surprise or alarm was occasioned, therefore, by the announcement on last Tuesday that the New York City Railway Company, the lessee of the Metropolitan Street Railway system, had been placed in the hands of receivers appointed by the United States Court. As Wall street had already discounted such an outcome, the speculative effect of this action was of the slightest. It would seem, in fact, that both Wall street and the general public regard the move in question as being one in the right direction. The disentanglement of the many complications which surround the traction properties of New York would seem an impossible task unless the work were under the supervision of the courts. On such grounds the announcement has, in fact, been received with favor. It is by some regarded as improbable that the receivership will facilitate the work being performed by the Public Service Commission in its examination of the Interborough-Metropolitan combination and its auxiliaries. It is to be noted that the action under which the receivers were appointed was begun by creditors of the New York City Railway, and not by the minority stockholders of the Metropolitan Street Railway, although it is understood that the latter approve of and are in sympathy with the proceedings, even though they cast further doubt upon the probability that further dividends at the rate of 7 per cent. per annum will be paid upon the Metropolitan stock under the lease to the New York City Railway and the guarantee thereof by the Metropolitan Securities Company. Considering the magnitude of the interests involved, the matter has certainly been received very quietly by the street and the public. It may be well to remark that the capitalization of the different concerns comprised in the Interborough-Metropolitan combination, including the subway, the elevated lines and the surface roads of Manhattan and the Bronx, mount up to about $700,000,000 gross, and allowing for the stocks and bonds of the different companies which are not held in the treasuries of the leasing or holding organizations, there are at least $350,000,000 of such securities outstanding in the hands of the public.

One of the incidents of the week was a call issued by the New York, New Haven & Hartford Railroad management for a special meeting of the stockholders to be held on October 30, to act upon a proposed issue of over $35,000,000 of new stock. The new shares are to be subscribed for at $125 per share, the stockholders to be given the right to take one share of the new stock at that price in respect to each four shares they now hold, and holders of the convertible debentures are also to have the right to subscribe on the basis of the stock equivalent of their bonds. This operation will call for an increase of about $30,000,000 in the outstanding stock of the company, and if all the issue is taken it will produce in the neighborhood of $37,000,000 cash, the statement being made that practically all of this large sum is to be devoted to the purchase of new equipment. It must be admitted that this further large prospective increase in the New Haven road's securities has not been received with much favor, following, as it does, so many other successive creations of fresh capital. In fact, the stock market signified its feeling in the matter by a prompt drop of some 15 points in the quotation for New Haven shares, the price of which dropped to 140½ on the Stock Exchange.

The exceedingly irregular character of the August export trade returns is illustrated by the detailed returns of shipments in leading lines of export trade as compared with the same month a year ago. Following are the details now available:

August	1907	1906	*Changes*	
Breadstuffs	$13,110,862	$12,916,152	Inc.	$194,710
Meats and dairy prod	16,209,270	16,683,511	Dec.	474,241
Animals	2,210,999	2,627,077	Dec.	416,078
Cotton	4,384,947	9,292,992	Dec.	4,908,045
Mineral oils	9,050,967	7,376,250	Inc.	1,674,717
Total above	44,967,045	48,895,982	Dec.	3,928,937
Total other exports	82,658,463	80,905,486	Inc.	1,752,977
Total all exports	127,625,508	129,801,468	Dec.	2,175,960

Cotton exports, it will be seen, were less than half what they were a year ago, due, no doubt, to the lateness of the present year's crop movement. Provisions and live-animal exports also decreased, while, on the other hand, breadstuffs and mineral oils increased. The increase in breadstuffs exports was due entirely to larger shipments of corn, as those of wheat and flour decreased. Smaller shipments of bacon, butter and cheese explain the loss in provisions, and our shipments of beef cattle also fell off. In the five leading lines of export a net decrease of 8 per cent. was shown, while in "other exports" a gain of 2 per cent. was shown, making a net decrease in all exports of 1.7 per cent. For the current month a larger movement of cotton and breadstuffs is probable than in August, but it is doubtful if a gain over September a year ago will be finally shown.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Contract—Illegality—Sunday Law.

The Supreme Court of Wisconsin held, in the case of Jacobson vs. Bentzler, that a contract made on Sunday the formalities of completing which are not finished until another day is illegal.

Water—Connection—Contract—Breach.

The Supreme Court of California held, in the case of Hunt et al. vs. San Lorenzo Water Company, that the breach of a contract to connect property with a water main and erect a hydrant for its protection from fire does not render the company liable for the value of the property in case it is destroyed by fire for want of water to extinguish it, where no time is fixed when delivery of the water shall commence.

Compress Company Declared a Trust.

The Mississippi anti-trust law prohibits one corporation from purchasing the interests of a competitive company. Under this law a suit for ouster was recently brought against the Gulf Compress Company, which is said to own or control thirty-one compresses, sixteen of which are in Mississippi, the suit being based on the purchase of an independent compress at Vicksburg. The Gulf Compress Company set up the defense that the Vicksburg plant was purchased from an individual to whom it was sold a short time before by the old corporation. Chancellor Hicks on Saturday last decided that the compress company was an illegal trust and allowed it one year in which to wind up its business in the state and withdraw.

Employer's Liability—Chauffeur.

In the case of Bennett vs. Busch, decided by the Supreme Court of New Jersey, it appeared that the defendant, while on a business trip in an automobile, made his headquarters at a hotel, the automobile being kept in a garage several blocks away. On one evening when an accident occurred, on arriving at the hotel the defendant, after telling the chauffeur that he was going out in the machine that night, directed him to go downstairs in the hotel and get oil. Instead of obeying this instruction literally the chauffeur drove the automobile to the garage for the oil, and while on his way there a collision, which formed the basis of the suit, occurred. The court held that the question whether the chauffeur was acting within the general scope of his authority was properly submitted to the jury, although in this particular instance the use of the machine was in disobedience of the literal instruction of the employer.

Accident—Insurance—"Wound."

An accident policy covered, among other things, blood poison sustained by physicians or surgeons resulting from septic matter introduced into the system through "wounds" suffered in professional operations. A dentist was operating upon a patient who suddenly coughed, and particles of septic matter from his mouth were thrown against the mucous membrane of the dentist's eye. The septic matter, without abrading, penetrating or bruising the membrane, infected it and caused blood poisoning. The United States Circuit Court of Appeals for the Eighth Circuit held (Fidelity & Casualty Company of New York vs. Thompson) that the dentist, the appellee in the case, had not received any wound within the meaning of the policy and was not entitled to recover under the provision mentioned. The court further held that it was error for the trial court, under such circumstances, to charge that the term "wound" as used in the policy included any lesion of the body resulting from external violence, whether accompanied by a rupture of the skin or mucous membrane or not.

Insolvent Bank—Stockholder's Liability.

The United States Circuit Court of Appeals for the Second Circuit held, in the case of Kenyon vs. Fowler, that where the receiver of an insolvent national bank brought suit to recover an assessment on shares of stock standing in the defendant's name on the books of the bank, and the defendant denied liability, claiming that the stock was issued and his name as owner entered upon the books without his knowledge or consent, and the court found that the defendant knew that the certificates were issued in his name and had made no effort to have his assignee's name substituted on the books of the bank, the defendant was liable for the assessment. The court said: "It cannot be denied that the rule invoked by the plaintiff and followed by the Circuit Court is a severe and drastic one, imposing upon the stockholder the duty, after he has sold and assigned his stock, of seeing to it that his name is removed from the books of the bank. * * * Harsh as the rule may seem, it is clear that it is necessary for the speedy and efficient winding up by the Comptroller of the affairs of insolvent banks. He cannot enter upon an investigation and hear proofs pro and con to determine who are the stockholders, and the reasons are manifold and cogent for holding that in making his assessment he is justified in relying on statements found in books of the bank. They are at least prima facie evidence."

Minnesota Rate Law Decision

In the proceedings brought by the railroads to enjoin the enforcement of the Minnesota rate laws and regulations, Judge Lochren, sitting in the United States Circuit Court at St. Paul, at the close of last week, rendered a decision in which he continued the order made at a previous hearing restraining the enforcement of the commodity freight rates prescribed by chapter 232 of the Minnesota laws of 1907, but refused to issue an injunction against the enforcement of the 2-cent passenger fare prescribed by the legislature, and the merchandise rates ordered by the railroad and warehouse commission on September 6. The decision seems to leave the status of the matter without change, pending a final decision on the merits of the controversy.

Patent—Infringement—Contempt.

The United States Circuit Court for the Southern District of New York held, in the case of the Underwood Typewriter Company vs. Elliott Fisher Company, that a preliminary injunction restraining the infringement of a patent is violated by the use of the essence of the invention, though there is a change in the mechanism; that infringing machines manufactured during the life of a patent cannot be sold or used after the expiration of the patent, and that the court has power, when a prima facie case of contempt is made out on motion, to order the marshal or a receiver to take possession of the infringing articles owned or controlled by the defendant and hold them until final decree, and will, if desired, appoint a master to superintend the taking or delivery of said articles and take testimony and pass upon controverted questions arising in the proceeding.

Water—Diversion—Official—Damages.

According to the decision of the Supreme Court of Ohio, in the case of Wrightsel vs. Fee, a road supervisor and those working under his direction are, without regard to the motive which prompts them, liable in compensatory damages for the diversion of water from its natural course and casting it upon the lands of another, no right to make such diversion having been acquired by the public. After referring to numerous cases cited in the brief for the defendants, the court said: "Attention to the cases cited will distinguish some of them as holding the immunity of a public officer from damages for mere non-feasance, others as according that immunity to an officer who acts judicially, and others as holding the same rule with respect to the conduct of a ministerial officer who is acting strictly within the line of official duty and authority. In general they concede that a public officer charged with ministerial duties who exceeds them to commit a tort is liable for its consequences."

Negligence—Liability—Invited Person.

In the case of Hyatt vs. Murray et al., recently decided by the Supreme Court of Minnesota, it appeared that the defendants were engaged with their employees in loading a quantity of logs upon cars for shipment. The plaintiff, who was in the employ of the surveyor-general of logs and lumber, was sent to the defendants' premises, where they were so engaged, at their instance and request, to scale the logs being so shipped. He was injured while engaged in the service by reason of the alleged failure of defendants' employees properly to perform the work incident to loading the logs. The court held that the plaintiff was not a mere licensee upon the defendants' premises, but was there at their request and for the purpose of transacting business with and for them; that the defendants owed him an affirmative duty to exercise reasonable care in the conduct of the work, in connection with which the plaintiff was performing his duties, to avoid injury to him, and that the question of the defendants' negligence in the premises should have been submitted to the jury.

BUSINESS NOTES.

The Paper Industry.

"The first paper mill in the country was built by an ancestor of David Rittenhouse, the astronomer, in Germantown, now a part of Philadelphia," relates the New York *Journal of Commerce*. "Nearly a century ago a biographer of David Rittenhouse wrote: 'In order to show the present importance of that article (paper) as a manufacture in the United States, and which was first fabricated in this country by the Rittenhouses, the reader is presented with the following view of the quantity of paper of various descriptions annually made at 185 paper mills within the United States, taken from the latest information furnished on this subject:

	Tons	*Value*
For newspapers	500	$150,000
Books	630	245,000
Writing	650	333,000
Wrapping	800	83,000
Total	2,580	811,000

"The 'latest information furnished on this subject' now is a bulletin on the paper and pulp industry issued by the Census Office, bringing the figures down to 1903. It gives the quantity and the value of the product of 761 factories as follows, arranged in classes identical with the classification of 1813:

	Tons	*Value*
News	912,822	$35,906,460
Book	515,547	37,403,501
Fine	146,832	22,249,170
Wrapping	644,291	30,435,592
	2,219,492	125,994,723
Add boards	520,651	16,959,557
Other products	366,553	20,692,140
Total	3,106,696	163,646,420

Perhaps the first thing that will occur to one in comparing these tables is that in 1813 writing paper was considerably in excess of news paper. At present there is more than six times as much news paper as writing paper."

Railway Cars, Carriages and Wagons.

A bulletin containing special reports on carriages and wagons and the steam and street railroad car industry, just issued by the Bureau of Census, presents statistics relating to 4,956 establishments making carriages and wagons and 1,314 steam and street railroad car construction and repair shops as reported at the census of 1905. Pennsylvania was the leading state in the steam-car industry. Its product was valued at $80,449,604, or 19.1 per cent. of the total value. Illinois was second in rank, with a total of $56,417,673. The aggregate value of the steam railroad cars built during the census year was $100,346,912. This amount includes $59,663, the value of steam cars built in street-car manufacturing establishments. The total number of cars manufactured during the year was 119,940. Of these 2,446 were passenger cars and 115,494 were freight cars. The passenger cars were valued at $20,486,260 and the freight cars at $79,215,260. The value of the freight cars was, therefore, almost four times as great as the value of the passenger cars. The increase in the number of passenger cars was 78.7 per cent. and the gain in value was 132.6 per cent. The number of freight cars decreased 19.3 per cent., while their value increased 2.6 per cent. The great development of street railroads since 1890 has caused an extraordinary growth in the industries engaged in the construction and repair of street-railroad cars. The value of products for these industries nearly quadrupled during the fifteen-year period from 1899 to 1905, increasing from $6,268,462 in the earlier year to $24,281,317 at the last census. A capital of $126,320,604 was invested, and 5,058 salaried officials and clerks and 60,722 wage earners were employed in the manufacture of carriages and wagons, including all the various kinds of vehicles propelled by animal power for land transportation. The expenses of the industry included $5,239,043 for salaries, $30,878,229 for wagons and $61,215,228 for materials. The value of the products was $125,332,976.

Passenger Traffic in New York.

The report of the New York City Board of Rapid Transit Railroad Commissioners for the year 1906, the last report which that body will make, now that it has been superseded by the Public Service Commission of the First District, contains much interesting data about passenger traffic in New York City and presents graphic estimates, in the form of charts, of what traffic in future years may be expected to be. Thus it is pointed out that the population of Manhattan and the Bronx has been estimated at 2,456,002 for the fiscal year 1906. It will probably be about 2,740,000 in 1911, and 3,170,000 in 1916. The total paid traffic for the last five fiscal years has increased about 41 per cent., to 818,273,413 per year. The total paid passengers are distributed as follows: Surface lines, 422,567,025; elevated lines, 257,786,756; subway, 137,919,632. At the 41 per cent. rate of increase for five-year periods the total traffic in Manhattan and the Bronx will be about 1,153,000,000 in 1911, and 1,626,000,000 in 1916. During the fiscal year 1906 389,555,025 paid passengers were carried on the street railways of Brooklyn. The elevated lines carried 125,221,831, and the surface lines 264,333,194, or about 32 and 68 per cent. respectively of the total number. If the same rates of increase which have prevailed during the past five years are maintained for a decade, in 1911 the number of paid passengers carried on the surface roads in Brooklyn will amount to about 336,000,000, and in 1916 to about 426,000,000. From careful estimates it is believed that not far from 560,000,000 paid passengers will have to be provided with transportation in Brooklyn on all lines during 1911, and 800,000,000 during 1916. In the borough of Richmond 15,571,889 paid passengers were carried during the fiscal year of 1905; 8,957,414 of these were carried on the surface lines, the remaining 6,614,475 on the steam roads. The total increase for the five-year period 1901-06 was about 28 per cent. That borough now has on an average about two inhabitants to the acre. It is estimated that its population may be about 100,000 in 1916, or a little less than three to the acre, and there should be approximately 26,000,000 paid passengers carried in Richmond. In the borough of Queens the conditions are somewhat similar to those in Richmond, except that the population is larger and has increased about twice as fast. In 1906 the population was 208,596. The completion of the tunnels now under construction will probably cause a phenomenal growth in the population. Based on a normal ratio of growth, however, it is estimated that it will be about 300,000 for 1916. In studying the traffic the Long Island Railroad has not been included. There were 22,115,729 paid passengers riding on the surface lines during 1906, an increase of nearly 100 per cent. during the five fiscal years, as against the 28 per cent. increase in Richmond. If the traffic increases as rapidly during the next decade as it has during the past five years, in 1916 the travel in Queens Borough will equal over 88,000,000 paid passengers.

Who Gets the Railway Income?

The three main claimants upon the revenues of the railroads of the United States are labor, capital and government. According to the latest available statistics, the expenditures for these three sharers, in the form of wages, dividends and taxes, averaged $1,391,000,000 yearly for the latest five years. Of this total the employees of the railroads, including officers and all kinds of labor, received 57.3 per cent. For dividends and interest paid to capital the average disbursements were 38 per cent., and the bill of the tax collector for all political divisions was 4.7 per cent. The table below, which we take from the *Wall Street Journal*, gives the totals for each of these lines of expenditure between 1902 and 1906, inclusive, as reported by the Interstate Commerce Commission:

	Wages	*Div. & int.*	*Taxes*	*Total*
1906	$901,000,000	$595,000,000	$75,000,000	$1,571,000,000
1905	810,000,000	560,000,000	63,000,000	1,463,000,000
1904	818,000,000	533,000,000	62,060,000	1,433,000,000
1903	757,000,000	490,000,000	58,000,000	1,295,000,000
1902	676,000,000	468,000,000	53,000,000	1,197,000,000
Average	798,000,000	529,000,000	62,000,000	1,391,000,000
Per cent	57.3	38	4.7	100
P. ct. inc. 1902-05	33.0	27	41.0	..

The total represented in the above figures forms somewhat more than two-thirds of the gross earnings of our railroads. The other third not represented is held in the form of working capital, of surplus and other undistributed resources. The annual disbursements of the two-thirds here under discussion comprise a series of financial operations of the most intimate relation to the communities concerned. The wage payment or earnings of employees in 1906 was $901,000,000, having increased $225,000,000, or over 33 per cent., since 1902; while dividends and interest, or the share which capital gets, increased 27 per cent., and the share of taxes 41 per cent. The number of employees of railroads has increased during this period from 1,189,315 to 1,521,355 persons, or nearly a third. The total amount of disbursements to the credit of labor has kept pace with the gain in numbers. The rewards to capital have gained somewhat less, while the amount of taxes has increased more rapidly than either of the other participants.

CURRENT BUSINESS NEWS.

Commercial.

Statistics, admittedly incomplete, show that the oyster production of this country is more than 16,000,000 bushels a year, of a value greater than $29,000,000.

Foreign crop conditions as published Tuesday in the Liverpool *Corn Trade News:* United Kingdom—The weather continues very favorable and harvesting has made good progress. An official report for Great Britain makes the condition of wheat 101, oats 105, potatoes 93 and hay 108. These figures compare with the condition in August, as follows: Wheat 100, oats 103, potatoes 96 and hay 107. At this time the wheat crop was estimated at 50,400,000 bushels. France—Rain is wanted to enable plowing to be carried on. Offerings are liberal. Germany—Offerings are increasing, but actual supplies are light. The recent improvement in the potato outlook has been maintained, although the quality is doubtful. Sweden—The quality of wheat and rye is rather poor, while oats are partially green. Hungary and Roumania—The drought reported is favorable for corn, but, on the other hand, is hindering wheat plowing. Russia—Views regarding the harvest outlook are about unchanged, which last week were reported as fair. Supplies show a fair increase. The weather in the south is favorable. Turkey—The import duty on wheat, which was 8 per cent. ad valorem, has been removed. Spain—An unofficial report estimates the wheat crop at 102,400,000 bushels. The wheat crop last year was 152,000,000 bushels. This crop is believed to have been overestimated. Markets are very strong. Portugal—It is predicted that it will be necessary to import 3,600,000 bushels wheat this season. The rye and corn crops are both short. Italy—Recent reports regarding a large crop are confirmed. Australia—Good rains are reported in South Australia and Victoria, thus relieving the drought. Argentine—Weather conditions continue favorable.

As a result of the hearing of the wholesale and retail dealers in butter, Commissioner of Internal Revenue Capers has ruled that where dealers in butter have procured the butter from manufacturers and creameries, and it is found that the butter contains more than 16 per cent. of water, it is then adulterated or process butter and is liable to a special tax. Where the assignments of butter by the creameries are to the dealer as a commission merchant or sold on commission, the manufacturer and not the dealer is to be held liable for the special tax. Where the dealers buy the butter direct, however, and assume ownership at the outset, liability is upon such dealers, with special instructions, however, to have such dealers report from whom they bought, so that additional effort can be made to fix the special tax also upon the manufacturer.

Daily newspaper reports state that a British engineering firm has captured from American competitors a contract for the equipment of the most important sugar refinery built in recent years in Porto Rico, in the Oroyaya district. Notwithstanding that the duty to be paid the Porto Rican authorities by the successful parties will amount to $157,500 on the necessary machinery for this enterprise, and that our home competitors had no such obstacle to figure against, since American imports would not have been taxed in Porto Rico, the foreigner won out. The value of the contract is said to be $350,000. This difficulty, however, was offset by the cheaper freight rates from Great Britain to Porto Rico, the charge being only $6 a ton, while from this country the transportation would have cost $13 a ton, although the distance is less than half that from Great Britain to Porto Rico.

Official figures show that France will reap bountiful harvests this year. The wheat yield will be 130,377,000 hectoliters, against 114,501,000 last year; rye will yield 20,642,000, against 17,771,000, and maslin, a mixture of wheat and rye, will yield 2,474,000, against 2,205,000 hectoliters. The production for five years and the averages, in bushels, for each, of wheat, oats, barley and rye, were as follows:

	Weeat	*Oats*	*Barley*	*Rye*
1906	324,725,000	258,454,000	37,004,000	51,095,000
1905	335,453,000	260,581,000	40,841,000	58,116,000
1904	298,726,000	257,811,000	38,338,000	52,141,000
1903	364,320,000	300,366,000	43,345,000	57,951,000
1902	327,841,000	276,948,000	41,948,000	47,051,000
Average	330,233,000	272,632,000	40,295,200	53,270,800

Ratifications of the Anglo-Russian convention took place at the Russian Foreign Office Monday. This convention regulates the respective interests of Great Britain and Russia in Tibet, Afghanistan and Persia. It particularly defines the line of action which the two powers will follow in the three countries mentioned. In Persia the spheres of influence are definitely fixed. Russia maintains her position in the north and Great Britain in the south. Other governments interested have been assured that the convention does not threaten the integrity of the country and does not interfere with vested interests. For this reason the question of the Bagdad Railroad is left to future negotiations between the powers, including Germany and France. The convention guarantees the maintenance of the present position of Tibet and Afghanistan, each of the contracting powers agreeing not to endeavor to obtain any advantages in these fields which might redound to the disadvantage of the other.

A press cable from St. Petersburg states that the report of the Central Statistical Committee shows that the expectation of a fine crop has been signally disappointed. The current year's crop yielded only 66,000,000 bushels more than last year, leaving a shortage of 200,000,000 bushels, or 11 per cent. of the average crop. Winter wheat is 32 per cent. short, spring wheat 14 per cent. and rye only 7 per cent. The exports of grain, it is expected, will hardly exceed last year. This year's exports will be of this year's crop, leaving what stored old grain there may be for reserve.

The Turkish government has entirely prohibited the export of wheat from the vilayets of Uskub, Monastir, Saloniki, Adrianople, Erzeroum and Smyrna, and from the ports of the Black sea and Sea of Marmora. In addition to the exemption of foreign wheat from duty, imports of foreign flour are only subjected to a duty of 6 per cent., while the usual tax of 2 per cent. has been abrogated on arrivals from the parts of the empire not included in the prohibited area.

Crop conditions are poor in Porto Rico this year owing to the severe drought, and Governor Post fears they will be next year. One great trouble is that the island has outgrown its transportation facilities. In the first year under civil government exports were $19,000,000, last year $45,000,000 and this year $76,000,000, without improvement in transportation.

The *Modern Miller* states that, as the result of an experiment made by a citizen of Dawson, Yukon Territory, the department of agriculture of the Alaska-Yukon-Pacific Exposition, which will be held at Seattle, Wash., in 1909, will add to its exhibit of Alaska and Yukon grown products another valuable cereal—Indian corn. It seems that last spring this citizen obtained seed corn of an early maturing variety which was planted in a greenhouse, and subsequently transplanted outdoors. On July 4 the first ears were ripe.

The following table, taken from London *Daily Mail*, shows the purchasing power of the sovereign in 1895 as compared with to-day in the case of sixteen articles in everyday use, selected at random from the price list of a leading London store. The first column illustrates what could be done twelve years ago with a sovereign. To buy the same goods of equal quality to-day, 24 shillings would be needed:

	1895	1907
Six four-pound loaves	2s. 6d.	3s. 0d.
Seven quarts of milk	2 4	2 4
Half pound of tea	0 10	0 11
Three and a half pounds of sugar	0 6½	0 9½
Half pound of cocoa	0 7	0 9
One pound of bacon	0 9	1 1
Seven pounds of flour	0 8	0 10
Three and a half pounds of rice	0 6½	0 8
Half pound of sultanas	0 2½	0 4
One pound of English Chedder	0 8½	0 9½
Two pounds of butter	2 8	2 8
Half pound of lard	0 4	0 4
Seven pounds of sago	0 11½	1 5
Half pound of arrowroot	1 0	1 7½
One pound of candles	0 4½	0 6½
One pound of currants	0 4	0 5
One pound of raisins	0 5	0 6
Six pounds of meat	4 3	5 0
	£1 0s. 0d.	£1 4s. 0d.

As a result of the lower prices for copper, the Sheet Copper Association has reduced prices 4 cents a pound, to 20 cents.

Financial.

The Mercantile Trust Company, of St. Louis, has absorbed the Missouri Lincoln Company. It is reported that the terms are one share of Mercantile for two and a half of Missouri Lincoln, or, approximately, $130 per share for Missouri Lincoln, $5 per share more than the Commonwealth Trust Company offered for the same.

It is said that E. R. Thomas, O. F. Thomas and F. Augustus Heinze, who acquired control of the Provident Savings Life Assurance Society last January, have arrangements well under way for the sale of it to a syndicate.

The New York News Bureau is publishing special editions of its *Wall Street Summary* in connection with the convention of the American Bankers' Association, in session at Atlantic City this week. Besides reporting the doings of the bankers, the publishers of the *Summary* are printing a number of articles on economic matters. One of these, entitled "Causes of Depression," by Maurice L. Farrell contains food for thought.

Consul-General Anderson, of Rio de Janeiro, submits a statement of the public debt of Brazil, prepared by the Bureau of Commercial Statistics of the Brazilian government. The figures given represent the dollar equivalent of the original figures in English pounds, with the milreis valued at 15 pence (30 cents) and the pound at $4.86. The statement follows:

	1906	1905
Foreign and home gold funded debt	$357,585,323	$358,357,285
Internal funded debt payable in currency	161,665,544	163,489,044
Total funded debt	519,251,857	521,846,329
Floating debt paper	55,779,860	55,192,454
Total federal debt	575,031,727	577,038,783

The *Insurance Press* gives this table as showing the embezzlements during the first half of the past three years:

	1905	1906	1907
January	$518,965	$554,213	$728,715
February	432,742	688,342	1,590,161
March	887,113	314,045	1,421,800
April	2,333,046	983,835	1,130,633
May	600,165	771,850	406,962
June	462,953	516,114	204,416
Total	5,234,985	3,828,399	5,482,687

Banks and trust companies were affected to the greatest extent, furnishing $2,089,590 of the above total of $5,482,687.

The directors of the Greene-Gold Silver Company have decided to pass the semi-annual dividend now due on the $3,000,000 8 per cent. stock of the company.

On Thursday the directors of the American Ice Securities Company failed to declare the regular dividend on the stock, upon which the company has been paying 1¾ per cent. quarterly since January last. The following resolution was adopted at the meeting: "Since our income is derived entirely from dividends on the stock of the American Ice Company held in our treasury, and that company has not taken any action upon its dividend this year, it is deemed wise to retain all the money now in our treasury for the payment of coupons on our bonds as they mature."

Industrial.

The annual statement of the world's production of pig iron, compiled by James Watson & Co., gives the total make in 1906 as 58,742,322 tons, an increase of 4,744,357 tons on the output of 1905, and an increase on 1904 of 13,515,701 tons. In 1906 the United States manufactured 25,307,191 tons, an increase on the previous year of 2,314,811 tons, and 8,810,158 tons more than in 1904. Germany, with 12,422,177 tons, was the second largest producer last year, and the make was 1,434,554 tons more than in 1905, and 2,318,236 tons above the output of 1904. Great Britain was the third largest maker, the total being 10,149,388 tons, or 556,651 tons more than in the previous year, and an increase on 1904 of 1,586,730 tons. France last year produced 3,319,032 tons, Russia 2,619,000 tons, Austria and Hungary 1,596,342 tons, Belgium 1,431,450 tons, and other countries turned out 1,897,732 tons. In Great Britain, Cleveland was as usual the largest maker with 2,639,964 tons, or 132,249 tons more than in 1905, and 405,619 tons more than in 1904. Scotland produced last year 1,451,068 tons, an increase of 72,677 tons on the previous year, and 111,328 tons more than in 1904.

It is stated that bottle-glass manufacturers in South Jersey have enough business on hand to last the next ten months. Little ware is being stored, and shipments are very heavy. But it is reported that the window-glass industry, east and west, is very inactive, and quite a few plants have been dismantled. In South Jersey almost all are at a standstill. The manufacturers assert that the wage scale is far too high and has been since an increase was made in all window-glass lines last season. They say that no start may be expected this year until the Amalgamated Window Glass Workers' Association agrees to accept a 25 per cent. reduction.

More salt was produced in the United States in 1906 than in any previous year, and the value of the product was greater than in any year since 1890. The quantity was 3,944,133 short tons, or 28,172,380 barrels, valued at $6,658,350, a gain of 308,876 tons, or 2,206,588 barrels, over the production in 1905. This increase in production was accompanied by a slight increase in price, from $1.68 to $1.69 per ton—not sufficient, according to some producers, to offset the increased cost of labor and supplies.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Nine states reported a commercial production of slate in 1906—Pennsylvania, Vermont, Maine, Virginia, Maryland, California, New York, Arkansas and Georgia, named in the order of value of output. The production of 1906 was valued at $5,668,346, against $5,496,207 in 1905, an increase in 1906 of $172,139.

Statistics just compiled by the Mexican government show more than 1,000 copper "mines" in that country, all the larger and more productive of which are owned by Americans, the American capital invested being estimated at $100,000,000.

It is reported that the Japanese government will purchase for delivery during the next five years 900 locomotives, 19,000 freight cars, 1,000 passenger cars and five steamships. Representatives of the largest locomotive and car builders of the United States, as well as of the United States Steel Corporation, are either on their way or will leave for St. Petersburg and Tokio at the earliest opportunity to submit prices for all contracts to be awarded at this time. It also stated that the Russian government will buy for 1908 delivery 810 locomotives, 11,500 freight cars and a large number of passenger cars. The Russian government has appropriated $105,293,810 for its railroad improvement. Of this amount $53,843,250 will be spent in rebuilding its car shops and equipping them with modern machinery and tools, $8,636,935 will be expended in building car and locomotive shops at new terminals of railroads, and $30,874,250 will be spent for steel rails, with which its lines will be practically rebuilt. The government will also spend $11,940,275 for the construction of dwellings and hospitals for its trainmen. Japan has appropriated $75,000,000 for its improvements.

The census report on cotton consumption for the year ending August 31, 1907, shows that 5,296,783 running bales were taken by all American manufacturers, as compared with 4,820,990 for last year; 4,987,021 bales consumed, compared with 4,909,479 for last year; manufacturers' stocks at close of year, 996,279 bales, compared with 688,312 last year; active cotton spindles, 26,242,407, compared with 25,250,096 last year.

The regular monthly meeting of the directors of the United States Steel Corporation was held late Tuesday. It was stated at the meeting that new orders continue to show a falling off. The shrinkage still runs between 25 and 30 per cent, as compared with a year ago.

Railroads.

According to the New York News Bureau, another order has been sent out from the headquarters of the Pennsylvania Railroad Company to reduce expenses. This, however, will not affect the improvement work that is to be started this fall. Reports made to headquarters show that the expenses in the operation of the system this year are enormous—greater than ever before in the history of the company. It is proposed to reduce expenses at least $1,000,000 a month, this reduction to cover every division.

That our railroads are doing more work than last year is shown by the number of cars handled. In the first seven months of 1907, 21,819,218 cars were handled by thirty-eight associations, against 20,111,133 cars in 1906. This is an increase of 1,708,085 cars, or 8.1 per cent. The localities which show the largest gain are those of which St. Louis, the Pacific coast cities, the lower lake ports and Jersey City are the centers. Pittsburgh is among the few places where there has been a decrease in the number of cars handled. Between January 1 and July 31 there were 317,285 cars less reported than in 1906, when the total was 2,083,291 cars. Decreases occurred likewise in the Butte Terminal and the Colorado districts. Traffic in these three areas is identified with mining and metal industries.

Miscellaneous.

All the United States mail handled at the various post offices of the country next month is to be weighed, in accordance with a recent act of Congress. To facilitate the work in New York Postmaster Morgan has issued posters, to be placed in the general post office and all the subsidiary stations, asking the public to deposit its mail, whenever possible, thirty minutes before the advertised closing time.

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending September 26.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Retail trade feels the stimulus of long awaited cool weather, as does also filling-in order business from jobbers. On the other hand, regular house trade has decreased in volume now that the first rush of fall trade is over, and shipping of goods on orders is engrossing jobbers' attention to a large degree. Advices as to the real proportions of autumn trade vary with the sections reporting. The southwest, particularly St. Louis and Kansas City, reports large gains in dry-goods sales over last year at this date, and New York and Boston also report an increased volume of business, while that of Chicago is about equal, and Philadelphia's trade is slightly below that of 1906. A peculiar feature in this connection is the report from a northwestern market that anxiety to receive full supplies of scarce goods has induced over-ordering in some instances, and led to fears of cancellations later. The favorable feature in the crop situation was the failure of the first killing frost of the season to materially injure the one-fourth of the corn crop still unmatured on September 24. Only the northern skirt of the corn belt was touched by the frost. Tobacco and cotton have continued to make good growth, and the wheat crop of the Pacific northwest is now harvested, but evidence that the spring wheat in the northwest was impaired by unfavorable weather in harvest is found in reports of uneven yields, lowered grades and retarded shipments. Advices to BRADSTREET'S are that the late maturing wheat in the Canadian northwest was injured by bad weather.

The consensus of opinion there, as in our own country, is, however, that largely increased prices will greatly offset the lessened yields of nearly all crops this year as compared with last. These are, perhaps, best illustrated by saying that barley, rye, wheat and other grains are all bringing high prices at the northwest and inducing free marketing. On the other hand, southern producers are reported dissatisfied with the present prices of cotton, the recent decline and the campaign for 15-cent cotton inducing widespread holding. Collections are still a matter of complaint at many markets east, west and south, the latter section noting that the recent freer movement of cotton having only made for partial improvement. The money situation is without much change. Call and time loan rates rather tend to loosen a trifle, but the conservative tone of buying is still fortified by the tight rein held over money supplies for business purposes by financial institutions. Shipments of currency to the country are increasing, but the movement is late, and this, coupled with the enhanced cost of farm products, necessitating a relatively larger quantity of currency, renders the dates of return of this currency problematical.

In the iron and steel trade the quiet tone as regards new business is still the leading feature, though mills, furnaces and factories are still busy on old orders. New orders in the iron and steel business are reported by leading interests as running 25 per cent. behind a year ago at this date. There is apparently more competition for new business offering in finished products. In the cotton goods trade yarns are the weak feature and lower prices are asked, the feeling growing in that trade that the situation of the raw material as regards price will have more weight in the future than in the recent past. Metal prices as a whole tend to ease, and cotton has broken 35 points further this week and 165 points since early September, and wheat prices moved lower, despite bullish crop reports from America and Europe, thus enabling a large volume of export trade to be done. Cash corn is up 5 cents at New York, but only slightly higher at the west, and oats are 2 cents lower.

The first frost of the season, reported on Monday and Tuesday, found 20 to 25 per cent. of the corn crop still unmatured, but the damage appears to have been light. Iowa had about 30 per cent. of its crop open to damage, but nothing serious appears to have happened. Light frost also struck Illinois and Indiana and gave concern to packers of corn and tomatoes, but here also the damage was slight. In most cases it is a matter of grade rather than quantity. Nebraska, Kansas, Ohio and most of Missouri claim that corn has passed the danger without damage. Spring-wheat reports from the northwest are that frost early in September did greater damage than anticipated. Threshing and shipping are retarded and much wheat cannot be shipped till cold weather. Reports from North Dakota are that the threshings are very irregular, and the crop is the most spotted in years. Serious damage has been done to the Canadian crop, estimates of injury running as high as 30 per cent. of quantity, but the high prices paid are expected to largely offset this, so far as returns to the farmer are concerned. The western tobacco crop has come through rather better than expected. Sixty per cent. of the Kentucky crop has been cut, and with two weeks more of favorable weather a banner crop is likely, increased yields offsetting decreased acreage. In Ohio the burley tobacco crop is rather disappointing, but that of seed leaf is good. The Aroostook county (Maine) potato yield is not likely to be over half a crop, and complaints of rot are heard. The tomato crop in the Maryland district has been larger than expected, and difficulty in handling it all is reported. Good peanut, rice and sugar crops are reported from the south.

Best reports as to cotton crop condition still come from the south Atlantic states, the yields in which promise to be larger than a year ago. Picking is general throughout the belt and some cotton is being marketed, but there is general agreement that the recent decline in price has caused farmers to refuse to sell. Also influencing producers is the general movement to hold cotton for 15 cents. Reports from Texas are that cotton-picking is active, but sales by farmers are light. In the Waco district the estimate is for a crop 50 per cent. less than the average. In the New Orleans district the crop is making good progress, but boll-weevil damage is reported in some Louisiana parishes. In the Memphis district a large crop is expected if frost holds off, and reports from Arkansas are also very good.

Conditions in the shoe and leather industry are irregular. The restriction of output of sole leather is reflected in firm prices for desirable grades. Some dealers claim concessions in side leather in the Boston market. Hides are, on the whole, firmer there and at Philadelphia, but demand is not especially active as yet. A fair trade is doing in shoes, but eastern manufacturers are reported at about the end of the season's run, and some factories are taking inventories, usually not taken until November 1. Shoe shipments from eastern Massachusetts are 4.4 per cent. less than a year ago. Some retail shoe dealers report a turning of fashion from patent leather to other sorts.

The New York stock market is dull and stagnant, the principal feature being renewed bearish activity by traders, resulting in a heavy tone and moderate declines. The receivership of New York City Railway had no general effect, which is also true of the immunity granted to the Alton road. Unfavorable rumors about crop conditions had a certain influence, and one of the features was the renewed weakness of the Steel stocks, based on adverse reports of trade conditions. Copper stocks were irregular and heavy on the further reduction in the metal. Considerable activity continues in the New York City bonds, and the general bond list shows a firmer tone. Foreign exchange advanced sharply at the beginning of the week, but subsequently receded. Demand sterling is 4.85.50.

Pig iron continues quiet, business being composed of small lots for nearby delivery, there being little interest displayed by consumers as regards next year's requirements. The trend of prices is toward lower levels, especially when any desirable tonnage crops up. In the south the leading producers are endeavoring to hold prices, but the southern product is weaker in northern markets, the iron offered being resale iron bought at very high prices earlier in the year. It is said that stocks throughout the country are not increasing in any marked degree, and that rather than make heavy concessions, furnace operations will be curtailed. In fact, some eastern stacks will have to go out of blast for repairs before long. Bessemer pig iron is scarce, and basic is higher in price. Crude steel is in better supply. Competition in finished lines is more apparent, the result being weaker prices. Business in tinplates is disappointing. Quotations on certain grades of black and roofing sheets are lower. Larger discounts are being allowed by some producers of iron pipe, and there is more irregularity as regards prices for nuts and bolts. Business in structural material is dull, but contracts on long delayed work are again being figured on. The tightness of money makes it difficult to close pending contracts. In this connection it is interesting to note that builders of structures are making bids so low as to cause complaint in the trade. A bright feature in the general industry is the heavy orders for wire, especially from the agricultural districts, where high prices for products have provided a goodly supply of money. Old material is dull and prices are irregular. Coal and coke are firm and active. Copper is again lower, lake copper for future delivery being quoted at 14⅞ to 15 cents, while for electrolytic grades 14¼ to 14⅝ cents has been named. At the lower prices domestic demand for spot copper has improved slightly, while Europe has bought moderately for October and November delivery, but business, on the whole, is disappointingly dull and competition for orders is more in evidence. It is figured that business must remain on a hand-to-mouth basis so long as trade in finished lines remains dull.

Trade in refined sugar is considered satisfactory in view of the shortage of the crops. Prices are steady for refined and for raw grades, the latter of which are taken freely wherever offered at current prices. The outlook is that shortages in some cane crops, such as that of Cuba, will be offset by increases in Louisiana and some foreign cane-producing countries. The European beet crop will not exceed last year's.

Among the other industries, it might be noted that the decline in building activity has made lumber dull, and yellow pine and hemlock are easier at the west. Other materials are also easy, and hardware manufacturers are seeking orders, whereas a year ago deliveries could not be promised short of five months' delay. Whiskey is active despite the recent advances in cost, and a large business is doing. Naval stores are lower.

Bank clearings for the week ending September 26 aggregate $2,478,067,000, 9.8 per cent. under last week and 14 per cent. below this week last year. Outside of New York exchanges amount to $1,082,441,000, a loss of 2 per cent. from last week, but 8 per cent. over the week last year.

Business failures for the week ending September 26 number 166, against 179 last week, 165 in the like week of 1906, 185 in 1905, 179 in 1904 and 153 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending September 26 aggregated 5,272,737 bushels, against 4,340,854 bushels last week, 4,574,653 bushels this week last year and 4,470,352 bushels in 1901. For the first thirteen weeks of the fiscal year the exports are 44,114,573 bushels, against 39,878,022 bushels in 1906-07 and 77,914,744 bushels in 1901-02. Corn exports for the week are 1,193,190 bushels, against 298,911 bushels last week and 465,864 bushels in 1906. For the fiscal year to date the exports are 15,306,916 bushels, against 8,454,262 bushels in 1906-07.

IN CANADA.

Trade in Canada is good, textiles especially so, and there is still complaint that deliveries are backward. Special dispatches to BRADSTREET'S show that considerable damage was done to the wheat crop in the Canadian northwest by frost, snow and wet weather. Toronto reports a probable loss of 30 per cent. from last year, and this is confirmed by a Winnipeg dispatch. Calgary reports that 60 per cent. of the crop in that section was harvested before snow fell, and that all but 10 per cent. of the balance can be picked up. There is agreement that higher prices offered will offset the reduction in yield so far as the money return to the farmers is concerned. Montreal reports there is some improvement in the money situation, and now that some overexpansion is eliminated, trade is thought to be on a healthier basis. Dry goods are moving briskly at that city and winter fabrics are freely taken. Canned goods are very high in price. Toronto reports shipments of dry goods and of winter-wear goods heavy. Linen prices are very high. Collections from the country show some slight improvement, but are expected to be much better when the new grain crop moves. Winnipeg reports little effect upon trade from the crop-damage reports. Early cautious buying prevents any danger of overstocking by merchants in affected districts. Trade is active in British Columbia, but labor is very scarce. Failures for the week number 36, as against 40 last week and 27 in this week a year ago. Clearings for the week aggregate $78,525,000, a decrease of 5.6 per cent. from last week, but a gain of 7.6 per cent. over this week a year ago.

THE CANADIAN WHEAT CROP.

WINNIPEG.—Last year's wheat crop was about 100,000,000 bushels, and estimates are that this year's will be 30 per cent. less. The late spring and unfavorable weather conditions have retarded the crop very much. Cutting is practically completed in Manitoba, but not in Saskatchewan and northern Alberta. Indications are that Manitoba wheat will grade high, but frost and wet weather have affected grades in Saskatchewan and Alberta. On account of the late season it is very difficult to form correct estimates of the crop.

CALGARY.—Recent bad weather has affected crops, 60 per cent. of which were harvested before snowfall; of the remaining 40 per cent., at least three-fourths can be picked up. In the south the loss is very small, but in the north it is greater. The yield in southern Alberta should exceed last year's. Oats are in excellent condition, with an average yield over entire province about equal to last year's, although the quality is not so good. Prices, however, are 50 per cent. higher, and this should put more money in circulation.

TORONTO.—The damage by frost to the western wheat crop is estimated at about 30 per cent. of the total yield. The increased price, however, will materially offset this.

TRADE REPORTS.

Dry-goods demand at New York has been of good proportions, and aggregate sales are in excess of those of last year. The principal business has been in cotton goods, dress goods and silks. Collections continue fairly good, although prominent firms are not anticipating as much as usual. In the clothing trade business is also good, but collections are backward. Cotton yarns show no increase in demand, though some sales were effected by offering concessions. Worsted and woolen yarns are firm in price and in good request. Prices of raw silk have slightly fallen off, but

demand continues light. Business in cloaks, suits and waists is increasing, cool weather having an effect on sales; collections are fair. Retail dealers say their business is healthy. The fur trade has been at a standstill owing to a strike among operators. This will cause the reduction of the manufactured stock on hand. Manufacturers of artificial flowers and feathers are doing a prosperous business, and the millinery trade in general is good. Men's fall hats sell well, and women's machine-made hats sell freely, but buyers are not asking for the hand-made article. Firms manufacturing shirts, waists, gloves and neckwear report having received large orders. Jobbers of hosiery and knit goods keep busy and are sold up in most cases. Small manufacturers and jobbers are at a disadvantage owing to continued high prices. Wholesale grocers say sales are good and prices satisfactory, with a strong undertone, based on crop shortage. In the wine and spirit trades business has been fair, but dealers could do more without straining facilities. Buying of spirits has been large. California wine growers expect an excellent crop but keep prices up, and dealers are buying only to fill needs. Denatured alcohol is selling well; demand is increasing and prices firm. Collections in the city and nearby are slow. Eggs have further advanced. Receipts of strictly fresh are moderate, with demand very good. Butter is firm, with receipts somewhat increased. Supplies of cheese are only moderate; demand is good and prices firm. Flour receivers are complaining that jobbers are holding off for some concessions. In china, business is not equal to 1906, and merchants are buying in smaller quantities than for two or three years past. Hardware manufacturers are now looking for orders, where a year ago they would not accept them unless delivery would be taken in five or six months. In gas fixtures and brass goods the unsettled condition of the copper market interferes with the volume of goods put out. Collections in nearly all lines are slow. Interest in metals still centers in copper. Locally, the new low price of that metal has not stimulated buying to any extent, though in the past week some fair sales were made for export to China at about 15 cents. Machinery dealers report business quiet and collections fair to good. Structural steel manufacturers are still busy, but report fewer inquiries. Pig tin is in less demand, but some activity is noted in spelter, which had been dull for some time. Manufacturers of American hemp twine report business better than in August. Collections continue good. The demand for cotton cordage exceeds the supply. Business in Chinese and Russian bristles continues good at an advance of about 20 per cent. above last year's prices. In the jewelry trade cheaper grades of goods sell well and manufacturers are busy. Diamonds are dull. Leaf tobacco is quiet, high prices are maintained and manufacturers are still holding off. Manufacturers of cigars report a steady demand and business comparing favorably with former years. Business in drugs and chemicals is fairly active. In paper, demand continues good and prices steady, with an upward tendency. The month has been a dull one in real estate. Conditions in lumber and building materials show some improvement, business being larger and prices maintained; collections, however, are poor, and the car shortage is again becoming a source of worry to the trade.

The following telegrams show trade conditions at the cities mentioned for the week ending September 27:

BOSTON. — Dry-goods jobbing trade continues active, and sales are larger in volume than a year ago. Retail business has not yet become active, warm weather retarding sales, and collections by jobbers are backward. Some local manufacturers of cloaks and suits find retailers slow in placing large orders and inclined to await the development of trade. Cotton goods continue to show strength, unaffected by lower quotations for raw cotton. Cotton yarns, in contrast with cloths, are weak and prices are lower. In men's and women's wear worsteds are still most in demand, woolens not showing material improvement in demand. Men's clothing and furnishing goods jobbers have thus far done a very good fall business. Leather is firm in all desirable grades. Indications of a possible recession in the demand for patent leathers are noted. Some shoe manufacturers report that sales include a greater proportion of other finishes, particularly tans, russets and colored calfskins. The season is yet too early to warrant safe conclusions. Hides are firmer, but sales are limited to immediate needs. The general market for paper shows steady improvement, although the volume of business is not as large as usual at this time of year. There is pronounced firmness in prices, and the opinion is that further advances are probable in view of the high cost of raw materials. Business is of fair volume in furniture, carpets and upholstery goods; collections continue slow, and settlements by note are more frequent than usual. Electrical supplies are in fair demand, but collections require considerable solicitation. The coal market shows no material change. Anthracite is coming forward in good quantities on contract orders, but new business is quiet. Bituminous is scarce. Retail trade is quiet. In paints and painters' supplies fall business is opening well, with a brisk trade in prospect; prices firm. In lumber, business is generally quiet. Hardwoods are in limited demand, but prices are very firm. Southern lumber shows up a better business, but the general tone of the market is quiet. Pig iron, structural steel and other metals remain about the same as last week, no briskness being evident. There is a quiet tone to the flour market, and some concessions in prices are offered to stimulate business. Wholesale produce dealers report a poor fruit season, the high quotations restricting the volume of business very materially.

PROVIDENCE. — Manufacturing jewelers are exceedingly busy. Supply houses are rushed with orders, and in both this and the regular manufacturing line there is a scarcity of help. The lumber market is quiet. Cotton goods show considerable activity, and general trade conditions are excellent. The machinery and tool trade is in firm condition. Collections are slow.

PORTLAND, ME.—The potato crop in Aroostook county is estimated at 50 per cent. of last year's, and early digging shows 25 per cent. affected by rot. Seed potatoes are believed to be but little affected. The hunting season is now on and the usual amount of game is expected. Deer especially are reported as plentiful as a year ago. Retail business is waiting for cooler weather. Wholesale houses report trade in most lines good. Lumbermen are again active in the woods.

PHILADELPHIA.—The wool market continues to improve and there is a better demand for the best grades. Prices are stiffening, with a tendency to advance. Dry-goods jobbers are busy and orders are coming in freely, though the aggregate volume of business is not quite up to last year. Prices are firm and collections fair. Flour is moving slowly, consumers not being disposed to stock up; prices are firm. Chemicals and dyestuffs continue dull, demand being very slow, though quotations keep firm. Paints and glass are in fair demand at satisfactory rates, and the market keeps fairly buoyant. Lumber dealers are not satisfied with conditions, though there is a fair movement of building grades. Collections, however, are very slow, and there is an evident disposition on the part of conservative houses not to encourage heavy transactions. The hide and skin market has a better tone this week, the demand showing an improvement. Supply is full and prices slightly advanced. Goatskins show no change, the demand being quiet, supply full and prices not materially changed, excepting where there is some unloading, in which case concessions are made. Leather shows no appreciable change, the demand being only fair, supply full and prices remaining about the same. Boot and shoe dealers report a fair volume of business, with prices showing no material change. Tobacco orders from Canada and western states are heavier than from local users, who take sparingly. In the growing crop there is already indicated a marked shortage, and the 1906 crop now coming into market is liable to be higher. Liquor distillers have closed a large part of the contracts for their fall production at an advance of 5 cents a gallon, making it 60 cents. Rye (the grain) has advanced from 70 cents to $1 per bushel. This, with the advance in price on cooperage, increases the cost of whiskey 10 cents a gallon and has a tendency to stiffen prices on old goods. Spirits advanced during the year 4 cents a gallon. Wholesalers have not secured much fall trade. A few iron sales have been effected, which has slightly improved the tone, but new business in general is extremely light, and were it not for the contracts in hand, furnaces and mills would not have much to occupy them. No pig-iron stock of consequence is being accumulated, and it is probable there will be a curtailment in the production, many furnaces being much in need of repairs. Prices are without material change. Advanced and fixed prices in coal, with approaching colder weather, impart stability to the anthracite domestic trade. Bituminous and steam coal is in good demand, and prices are strong. The money market is in slightly better shape on account of lessening demand from the south. Rates are firm and no radical change is anticipated. Applications for season loans are smaller in amount.

PITTSBURGH.—While the pig-iron market continues very quiet, there being no sales and very few inquiries, prices remain strong at present quotations, and it is not thought lower figures will be reached in the near future. With the finishing mills there has during the past week been a noticeable improvement both as to inquiry and the volume of new business, and there is a better feeling generally as to the future. If the meeting on specifications results satisfactorily, a buying movement in rails is expected, and this will tend to further improve the situation. Coke is moving freely and shipments are about equal to production, there being but little surplus available. Spot quotations for pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $22; chilled basic, $21; No. 2 foundry, $21.25, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.90, and foundry coke, $3.25 to $3 50, at the ovens.

BUFFALO.—Wholesale and jobbing houses in dry goods, hardware, boots and shoes, and manufacturers and retail dealers in clothing, report trade active, exceeding that of the corresponding week a year ago, and while some still report collections somewhat slow, these, on the whole, are reported more prompt than a month ago.

BALTIMORE.—Business at retail has been only of fair volume, due to weather conditions in the early part of the week. The cooler weather of the last few days has started a movement in men's furnishings, particularly in hats. Business at wholesale has been of somewhat smaller volume than last week, but the month of September shows increased sales over 1906, the only unfavorable feature in connection therewith being the increased slowness in collections. There has also been some disappointment as to the movement of the cotton crop by the farmers in the south, they having to some extent stopped shipment because of lower prices of that article. Dry goods are quiet, with a few buyers in town. Advances are reported in dress goods and ginghams of 2 to 2½ cents, while other staples are firm and unchanged. Orders for the week in clothing have been of moderate volume, a tendency being to hold back orders for the present and buy for immediate demand. Leaf tobacco is active and there is a good demand for better grades. Receipts are light and collections slow. Shoe jobbers report shipments for September fully up to 1906. Salesmen are starting out for spring business, and prices are fairly firm, except in undesirable grades, which are a little off. Grocery business shows a slight improvement over last week. Canned goods, particularly of the smaller fruits, are scarce and prices high. Packers have been very busy with the present harvest of tomatoes. The tightness in the money market is reflected in the building line, in common with others. Material men report a falling off in business as compared with the same period last year. A fairly good volume of business is reported in the drug line, with a slight improvement in collections. There is no change in the money situation, demand exceeding the supply, and general collections in mercantile lines are slow.

CINCINNATI.—Business continues to improve. The city has more than the usual season's influx of country buyers. Money is stringent and demand is strong. Paper offered is being closely scrutinized. Crop conditions continue favorable. Corn is out of frost danger and promises well. Tobacco is cut. The yield is disappointing in burley, but seed leaf promises well.

CHICAGO.—Trading is holding up well, but the volume shows little change from the previous week, and is about the same as last year to a shade under. Dry goods and clothing are being bought with more freedom than other lines. Reduced prices for wire and nails are having a good effect, as buying has increased largely. In finished iron and steel new business is lighter, but mills are well supplied with orders. The Corn Products Company, which recently delayed plans for an immense plant at Summit, Ill., has taken it up again, and orders for 10,000 tons of structural material are likely to be placed soon. Jobbers are doing a fair business. Foundry men say orders are scarcer, but they are well supplied with old business for some time to come. Buying of pig iron is limited to small lots. Scarcity of cars is the feature in the coal trade, all western railroads being unable to furnish cars as fast as required. Sales of lumber are below recent years, and there is a shading of prices in hemlock and yellow pine, but hardwoods are steady. Groceries are having a fair trade. Butter, eggs, potatoes and poultry are higher. Live cattle, sheep and hogs are higher. Receipts of cattle and hogs decreased and sheep increased. Money is in active request and firm. Currency shipments are large. Collections are fair. A good part of the northern portion of the corn belt was visited by light to heavy frosts September 24 and 25, and while late corn was nipped to some extent, it is impossible to tell the extent of the damage. Fully 70 to 80 per cent. of the corn crop has matured without frost, and the remainder that has not been hurt will take a week or two more to mature. In Iowa the official estimate is that 70 per cent. is sufficiently matured to be cut, and shocking is in progress. The remaining 30 per cent. needs one or two weeks of good weather. As the frost was most severe in that state, there will be a larger percentage of soft and immatured corn there. Corn on the lowlands in northern and central Illinois and Indiana had a light frost, but no great damage is feared with good weather following. Best estimates on the crop are for not over 2,550,000,000 bushels under the most favorable conditions. Threshing of spring wheat shows irregular yields, North Dakota running from four to twenty-eight bushels, the crop being the most spotted ever raised. Plowing for winter wheat is interrupted by drought in Nebraska and Kansas. Grain is being moved to market more freely, high prices being attractive to farmers. Barley is bringing fancy prices, $1 at Milwaukee, 92 to 93 cents at Minneapolis and 90 to 98 cents at Chicago. Oats are also selling at the highest known at this season. The grain movement at Chicago last week was the largest since September, 1899.

PEORIA.—Jobbers in most lines report very satisfactory sales, with fair collections. Trade with retailers is somewhat quiet.

INDIANAPOLIS. — Frost visited Indiana during the week, but the damage done to corn and tomatoes is believed to have been light and not serious enough to materially affect the crops. However, it caused some uneasiness, particularly in the canning trade, and some apprehension is felt lest the next visit should not prove so fortunate for the crops. The stone industry reports a general falling off of trade from that of last year. The harness and hardware trades report business good, but collections lately have been somewhat slow. The implement trade reports that notes given earlier in the season have been taken up promptly, as a rule.

LOUISVILLE.—Business in all wholesale and jobbing lines continues fairly good. Dry-goods jobbers report a fairly active week on immediate goods. Prices of prints have been advanced ½ cent. Whiskey distillers and dealers report fall business opening up nicely and look forward to a large business. Drug wholesalers report an active business, exceeding that of last year. Boot and shoe jobbers report business good in staple lines. Hat and cap dealers say that the merchants visiting the state fair last week practically bought their entire remaining stock of fall goods. They are now preparing the samples of their salesmen for spring goods. Retail business, while stimulated by the visitors to the state fair, is dull. Dealers in all lines are complaining. Their spring season, owing to inclement weather, was dull, and continued warm weather this month has retarded their fall trade, which practically has not commenced. Collections by most houses are reported slow, especially from southern territories. Money is held strictly at 6 per cent. by banks, and loans are being restricted. All the banks have a considerable amount over their legal requirements, but do not appear to be inclined to loan much. The recent warm weather has been very favorable to the 1907 tobacco crop in Kentucky, especially to that part of it which is late. Fully 60 per cent. of the crop in the dark, Burley and Green river districts has been cut and housed under favorable conditions. With continuance of good weather for two weeks more, a banner crop will be harvested. The shortage in acreage reported earlier in the year will be more than overcome by a larger yield per acre.

ST. LOUIS. — In nearly all lines packing and shipping of fall orders occupy the attention of manufacturers and jobbers. Traveling men are again visiting the trade and are meeting with good results in the shape of filling-in orders. A general canvass of the various lines shows the following ratios of gain over last year at the same period: In dry goods, notions and kindred lines about 11 per cent., clothing 15, shoes 10, hats 12½, millinery 18, hardware 10, and groceries and drugs

about 8. Lumber and building material show a falling off. Manufacturers of overalls are running their factories to full capacity. Manufacturers of stoves and castings report business much in excess of last year; prices are firm, with an upward tendency. Flour is active at steady prices. Export trade shows a falling off as compared with last week. Cool weather has stimulated retail trade, especially among department stores. Money continues firm, and the demand is good on short-time paper. Collections in general are good, although in some sections where crops are late, payments are behind. Cool, wet weather during the past few days, it is thought, will have some damaging effect on cotton, but corn is said to be past danger.

KANSAS CITY.—Jobbing trade in leading lines continues very satisfactory for the season. Cooler weather has stimulated retail business, causing a good demand for fall wearing apparel and heavy goods. Collections are good. The corn crop has passed the danger of frost and is maturing under favorable weather conditions.

MILWAUKEE. — Prevailing cold weather has stimulated demand for seasonable goods in jobbing and retail lines. Collections are fair.

SIOUX CITY.—Wholesale business is fair. Colder weather increased retail trade. Frost occurred in some sections, but most of the corn crop is past injury. Good prices for grain prevail.

DAVENPORT.—Retail trade has been stimulated by cooler weather. Light frosts occurred on two nights this week, but were not severe enough to injure corn, rather benefiting it, in fact. Collections are fair. Demand for money is good.

ST. PAUL.—Current business is quite active in all lines, and future business is extremely heavy. Collections are not what was expected, because threshing is delayed by weather conditions, but money is coming in fairly well. Frost has affected wheat in places more than was at first supposed. The situation is not at all serious, but the grade has been reduced. It is found hard to thresh it, and it will not be accepted for shipment till cold weather. The outlook is favorable for increased business, but the increased price of fabrics is bringing about peculiar conditions. Opinion has it that the present low price of cotton will eventually affect the manufactured product when the mills fill present orders. Inability to secure some kinds of goods has induced merchants to place orders for like goods with different houses, and cancellations will result. At present it is thought to be a good time to sell goods, but not to buy.

MINNEAPOLIS.—Business continues quite satisfactory in all lines and colder weather stimulates the movement of seasonable goods. The weather is also favorable for work in the country, and farmers are very busy with their fall work. Collections are good. Lumber is quiet. Flour buyers are again somewhat backward and orders are smaller, though mills are fairly busy.

OMAHA.—Demand for staples is excellent and all lines show a substantial increase in business. Collections are fairly good. Corn is in good condition and maturing rapidly.

LINCOLN.—Retail trade is fair. Wholesalers report trade fair to good. Collections are fair.

CHARLESTON —Wholesale trade continues good and prospects for a good fall are very bright. Collections are fair. Good weather the past two weeks has aided farmers in gathering cotton, which is in excellent condition.

RICHMOND.—Wholesale dealers in dry goods and notions continue to receive late and fill-in orders, but fall trade is practically all in and travelers are preparing samples for spring ordering. In North Carolina tobacco is being marketed in large quantities, and prices continue good. In Virginia this crop is being cured. Manufacturers throughout the district are busy, and while in some lines the old crop is well used up, the supply will be adequate until the new crop is available. The peanut crop, though late, is in excellent condition and growers expect a full crop, while prices continue high for all grades of the old crop. Labor generally is more plentiful than at any recent time. Retail trade is at its between-seasons dullness; some dealers are displaying fall stocks, but sales as yet are nominal. Collections continue to show slight improvement.

SAVANNAH.—Recent rains damaged the cotton crop but slightly. Collections are below normal.

AUGUSTA.—Retail trade is improving. Jobbers report wholesale business good. New cotton is well on the market. The outlook is considered good.

ATLANTA.—Trade is good and collections are improving, owing to the fact that some farmers are selling cotton; but the majority are holding for 15 cents, and this is retarding collections to some extent. The crop is about two and a half weeks late. The general outlook appears good and money is a trifle easier.

MACON.—Trade is of fair volume. Collections are satisfactory. The weather is favorable for cotton-picking.

JACKSONVILLE.—A drop in the price of naval stores disturbs trade and causes slow collections. An average cotton crop is probable.

BIRMINGHAM.—Trade in general is showing an increase with cooler weather. Lumber continues dull.

MOBILE.—Jobbers report an increase of about 5 per cent. in the value of business over the previous year. The slump in the cotton market within the last few days has retarded business to some extent, though sales have shown up better than was anticipated. Collections are fairly good, but the majority of the planters are holding cotton for a better price, and in some instances are extending their notes. Cotton is being picked rapidly since the recent heavy rains. From all indications there will be little or no top crop this year.

MONTGOMERY.—Trade has fallen off somewhat in both wholesale and retail lines. Collections are a little better than last week. No improvement is noted in the cotton crop, and sales continue small.

CHATTANOOGA.—Trade, wholesale and retail, is increasing owing to the oncoming fall season. Collections continue fairly satisfactory. Building operations are still active.

KNOXVILLE.—A slight dullness is noted in retail trade, but the fall opening held this week was well attended, and dealers expect increased business with a favorable change in weather conditions. Collections are slower than at this time last year. Jobbers, however, report no marked decrease in business. Car supply is intermittent; temporary relief in the situation during July was followed by a protracted shortage, but coal-mine operators report conditions much improved, and shipments are going forward at the advanced figures usually prevailing at this season. Retrenchment in railway expenditures has but slight effect on labor, the loss being offset in a measure by excellent demand in other lines. Founders and machinists generally are doing a good business. One concern to which a large contract for building cars for Panama canal construction was awarded is materially increasing its force and working overtime.

MEMPHIS.—Trade, wholesale and retail, is improving. A good fall business is anticipated. Collections are slow to good. Cotton is opening rapidly and picking is well under way. With a late frost a good crop is expected.

NASHVILLE.—The state fair is being held here this week, and there is an unusually large attendance, which has greatly stimulated trade in retail lines. In jobbing circles good shipments are being made, and collections are fully up to expectation. In building there continues to be considerable activity manifested, and there are evidences of prosperous conditions among the farming element.

LITTLE ROCK.—Cooler weather has benefited retail trade considerably, and jobbers generally are rushed with business. Collections are better than a year ago and the outlook is encouraging. Cotton-picking is now general, but only a small quantity has as yet reached the market.

NEW ORLEANS.—Retail trade is fair. Jobbers are quite active, but the bulk of the business is filling-in orders. Crop conditions are still good. Rice harvesting is well under way. Sugar cane is in excellent condition. Cotton-picking is becoming general. The boll weevil is doing some damage in a few parishes.

FORT WORTH.—Cotton that has opened is being gathered rapidly, but farmers are not inclined to rush it to market. Fall trade is opening up nicely and a good business is anticipated. Collections are slow on account of the lateness of the cotton crop.

DALLAS.—Business in jobbing lines continues satisfactory. Collections are very slow. Cotton-picking is well under way, but sales are light.

WACO.—Business is fair. Collections are not quite so good, owing to farmers holding cotton for better prices. Indications point to about 50 per cent. of an average cotton crop.

SAN FRANCISCO.—A tendency has developed to postpone important contracts until after the November elections, as the prosperity of the city will depend largely upon the character of the candidates for municipal offices. Collections are slow.

SEATTLE.—Trade, wholesale and retail, is good, but collections are only fair.

SPOKANE.—Wholesalers report business good. Collections are fair. Labor is well employed. The grain and fruit crops are large, with prices good.

TACOMA.—Grain is pretty well under cover and the probability of loss through rains is minimized. A number of the lumber mills are closed, largely due to car shortage, and the advance in freight rates which is to take effect November 1 does not help the situation. Collections are fair.

PORTLAND, ORE. — All lines of trade are showing unusual activity, and collections are reported good.

TORONTO.—The movement of wholesale and retail trade here continues excellent. Heavy shipments of goods are going forward, and this will continue until the close of navigation. The dry-goods trade is excellent. One of the features is the movement in fall linens, which continues heavy. Stocks here are light, and with prices steadily advancing to almost prohibitive figures, there is some doubt about Canadian jobbers renewing at the high levels. The October price list shows an advance of about 50 per cent. in the last fourteen months. Orders are now being booked for the season of 1909. A big trade is doing in ulsterings and meltons. The outside demand for all lines of hardware is brisk and there is a fairly good local trade, but the falling off in the volume of building being done here will have some effect upon this branch of trade later. The grocery trade is active, with large shipments going to all parts of the country. Canned goods are very firm on more or less short stocks. The movement in country trade is fair and collections continue to show slight improvement. It is not expected, however, there will be any real change in this regard until grain moves to market more freely. Offerings of both butter and cheese are still light. Hides tend toward easier prices. Wool is quiet and unchanged.

MONTREAL.—The situation in money shows little change. There is still a pretty general feeling that conditions will gradually improve. The over-expansion, which most authorities think was the main cause for the stringency, has been pretty well eliminated, and it is felt that trade is now upon a healthier basis. It is true, however, that merchants and manufacturers still experience difficulty in obtaining the money they require. General wholesale and retail trade holds steady. Dry-goods lines are moving briskly. Manufacturers' deliveries of many lines of textiles are still slow, and wholesalers are in some cases badly in need. Deliveries of ready-to-wear goods are more prompt and in better volume than last year. There is some difficulty, however, in supplying the better class lines, which are in heavy demand. The call for sweaters and for all winter goods is brisk. Values hold firm. Hardware lines are moving freely, and the business in pig iron is quite brisk. The metal markets generally show an easier tone. The demand for builders' hardware and bolts and nuts is active. A good trade is moving in groceries. All canned goods are held very high. New tomatoes and peaches will be late owing to backward crops. Country trade is fair. Collections show little improvement. It is expected produce prices will hold high throughout the winter, and the outlook for country business is generally considered satisfactory.

VANCOUVER-VICTORIA. — General trade all through British Columbia continues exceedingly active. All lines of industry are busily engaged, and, as a result, there is from all parts of the country an active demand for wholesale goods. Values are firm. Fruit crops along the coast are turning out well. The labor situation is still a matter of some concern. It is a difficult matter to get men enough to do the work offering. The shipping trade is brisk. The announcement that the Canadian Pacific Railway may add two large steamers to their Oriental fleet is received with much interest here.

WINNIPEG.—In most lines of trade there has been an excellent business moving during the past week. It is evident that damage to the crops by frost has, in some localities, been quite serious. As yet, however, there has been little result felt in general trade. General conditions have for some time been such that merchants have been cautious in the placing of orders, and it is not likely that merchants in the affected districts will have heavy stocks upon their hands. Wholesale dry goods and groceries are moving well, and values in both lines are firm. The hardware trade is hardly as brisk. Lack of money has quieted the activity in building. Collections are unchanged.

FINANCIAL.

Money Market.

Some further considerable shipments of money have been made from New York to western and southern points, and although the Secretary of the Treasury is continuing his policy in regard to increasing the government deposits in the banks, there is some apprehension that the aid from that source may prove, on the whole, inadequate. It is noted, however, with satisfaction, that the funds which New Orleans, in particular, is calling on New York to provide will be used in the cotton movement, and that this will produce a large supply of commercial bills before long, thereby strengthening the position of this country in connection with foreign exchange. Toward the end of the week the call-loan rate at New York tended to harden a little, touching as high as 6 per cent., although renewals continued to be made at around 2¾ per cent., while it may be noted that on last Monday as low as 1 per cent. was recorded for such accommodation. Time money, however, continues very firm, the principal demand being for four months' arrangements, for which 6 per cent. continued to be paid, some lenders, in fact, standing out for 6½ per cent. for loans running over the first of the year, although borrowers refused to accept these terms. It is noted that as high as 7 per cent. was asked for such loans on industrials. Commercial paper is entirely stagnant, the nominal quotations being 7@6½ per cent.

New York Banks.

In last Saturday's Clearing House averages the gain in specie and legal tenders, which was $4,529,200, more than doubled the estimated actual increase in those items for the week. This was evidently the result of the system of averages, the statement of the preceding week having failed to reflect the actual cash gain by the banks. The other important feature of the showing was an increase of $8,606,800 in loans, which may be ascribed with a fair degree of certainty to the New York City bond payments. Deposits increased $12,171,200, or about $1,000,000 less than the combined gains in the loans and cash, the reserve required being $3,042,800 greater, and the surplus reserve increased $1,486,400. The figures of the statement compare as follows with those of the preceding week:

	Sept. 21	*Sept. 14*	*Changes*
Loans	$1,097,579,000	$1,088,972,200	I. $8,606,800
Specie	202,396,500	198,909,900	I. 3,486,600
Legal tenders	70,264,500	69,221,900	I. 1,042,600
Deposits	*1,057,023,600	1,044,852,400	I. 12,171,200

Foreign Exchange.

At the beginning of the week the market for foreign exchange at New York experienced a sharp rise, demand sterling going up to around 4.85.90. This movement was partly the result of a rather smaller supply of commercial bills, particularly of drawings against cotton, than had been anticipated. It was also noted that the demand for remittances was for a time rather eager, representing calls for money at London, in anticipation of the fortnightly settlement there, while it was also understood that some foreign loans made in the New York market matured this week and were paid off, thereby creating an additional inquiry for bankers' sterling. As the week progressed the supply of exchange, however, became more liberal, and demand sterling receded to 4.85.50, the market becoming rather quiet in tone.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Sept. 21	*Sept.* 23	*Sept.* 24	*Sept.* 25	*Sept.* 26	*Sept.* 27
4.83 @ 4.87	4.83 @ 4.87	4.83 @ 4.87	4.84 @ 4.87	4.83 @ 4.86½	4.83 @ 4.86½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.60 @ 4.85.70	4.85.90 @ 4.85.95	4.85.85 @ 4.85.95	4.85.60 @ 4.85.80	4.85.40 @ 4.85.55	4.85.45 @ 4.85.50

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.20 @ 4.82.30	4.82.40 @ 4.82.45	4.82.35 @ 4.82.45	4.82.15 @ 4.82.30	4.81.90 @ 4.82.05	4.81.80 @ 4.81.90

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.15; commercial bills, 4.81@4.81⅛; francs, 5.21¼ less 3-64@5.18⅛ plus 1-64; reichsmarks, 94 less 1-32@94 13-16 plus 1-64.

The Bank of England's discount rate is unchanged at 4½ per cent. Its weekly return showed a loss of £365,000 in gold, and the proportion of reserve to liability was 51.30 per cent, against 51.67 per cent. the week before. In the London open market call money is firmer at 3 per cent., and discounts are 3 13-16@3⅞ per cent. The Bank of France this week reported a loss of 3,550,000 francs in gold. Its rate is unchanged at 3½ per cent., the Paris market quotation being 3 13-16 per cent. At Berlin the bank rate is 5½ per cent. and the market 5¼ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending September 26 shows an aggregate of $2,478,067,000, as against $2,749,404,000 last week and $2,870,211,000 in the corresponding week last year. Canadian clearings for the week aggregate $78,525,000, as against $83,228,000 last week and $72,951,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	September 26	*Inc.*	*Dec.*	*September* 19

New York Securities Market.

None of the present week's developments bearing on the stock market were of a startling or a stimulating character. The dealings, in fact, shrank to about the smallest daily totals of the year, and were almost absolutely professional. The chief interest in the proceedings arose, in fact, from the circumstance that certain active traders are credited with having resumed a bearish attitude, and pressure from such sources was decidedly apparent in the later proceedings. As is natural in such a limited market, there were intervals when a little covering varied the course of prices, although it must be admitted that the fluctuations were, on the whole, unimportant and without much real significance, except so far as they indicated the limited amount of public interest or the indisposition of the large people to give effective support. Among the developments of the week was the decision of the United States Court at Chicago to grant immunity to the Chicago & Alton Railway in the Standard Oil rebate case. Another important event was the announcement that the looked-for receivership of the New York City Railway had materialized. This event, however, had been so thoroughly expected that it produced no general effect, and only resulted in somewhat lower quotations for certain of the stocks in the Interborough-Metropolitan group. The dealings in New York City 4½ per cent. bonds continued to be on a large scale, and on last Saturday the issue due 1957 touched 107¾, although this was followed on Monday by a break of a full point, indicating that there had been not a little speculation in the bonds. Subsequently, however, there was a good recovery, while the activity which has been maintained in them continued to attract better attention to the bond market at large, there being a tendency toward a further hardening of prices for prime railroad mortgages. The announcement of an issue of some $30,000,000 of New York, New Haven & Hartford stock, for which the stockholders will receive rights to subscribe at 125, was far from favorable in its effect on the security in question, which showed a decline of some 15 points. The checkered nature of the western crop news, and reports regarding the lateness of corn and of low temperatures in certain sections, were considered to be partly responsible for the renewed bearishness of traders, already referred to. The further decline in copper prices, bringing the metal down squarely to a 15-cent basis, naturally caused a great deal of irregularity in Amalgamated, although that issue continued to act as if it had measurably discounted the adverse conditions. American Smelting was another feature showing some weakness. The United States Steel stocks were subjected to more or less pressure from the bears, accompanied by vague reports about a further decline in the activity of the trade. Among the other happenings was the passing of the dividend on American Ice Securities stock, resulting in a 20-point break in the stock. On Friday the market was weak on an advance in the call-loan rates to 6 per cent. and on renewed aggressiveness by the bearish speculative faction.

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending September 19, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	592,571	35,000	37,659
London	560,362	23,887	40,660
Bristol	42,000	....	3,500
Glasgow	359,236	26,418	17,525
Leith	....	....	....
Hull	89,000	....	4,000
Newcastle	....	....	....
Manchester	120,838	15,240	224
Belfast	....	....	....
Dublin	16,000	....	15,445
Other United Kingdom	....	....	3,211
United Kingdom, orders	140,800	....	....
Antwerp	471,541	8,571	....
Holland	204,500	93,737	6,667
France	16,000	....	....
Germany	373,000	68,213	26,067
Portugal, Italy, Spain and Austria-Hungary	16,000	....	2,000
Scandinavia	84,000	....	22,400
Asia	....	....	43,611
Africa	....	....	....
West Indies	3,000	18,824	61,660
All other	....	8,901	5,945
Total	3,086,848	298,791	290,574

Exports of oats amounted to 167,496 bushels and of barley to 159,000 bushels.

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,739,836	2,895,020	1,041,696
August 8	3,277,993	2,262,961	865,002
August 15	2,947,433	2,827,954	1,068,519
August 22	3,565,347	3,196,375	1,170,340
August 29	3,808,866	5,081,999	1,429,250
September 5	2,923,710	2,466,032	1,194,215
September 12	5,291,866	4,953,216	1,682,404
September 19	4,340,854	4,677,522	2,178,428
September 26	5,274,737	4,574,653	2,064,932
Largest exports in 1907, week ending Sept. 12			5,291,866
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with September 21 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
Sept. 21, 1907	319,309	5,752,200	6,078,990	5,821,000
Sept. 14, 1907	304,727	4,890,496	4,864,117	6,258,378
Sept. 22, 1906	466,071	6,704,945	4,414,516	4,412,359
Sept. 23, 1905	443,999	7,639,054	3,907,232	4,590,037
Sept. 24, 1904	429,369	7,325,436	3,802,640	5,508,714
Season				
July 1 to Sept. 21, 1907	3,878,340	58,437,880	40,107,711	46,651,026

Wool Markets.

The firm opening of the London sales and the easier tone of the money market have combined in increasing the better feeling in the wool market, and the result has been an extremely large volume of sales during the week. London opened 5 per cent. higher on fine merinos and fine crossbreds, with low crossbreds unchanged, the second day of the sale offering a better selection. This practically assured buyers here that it would be useless to look for lower prices abroad on desirable wools, and they entered the market freely, worsted wools moving in large quantities, with a good sized movement in clothing wools. It is asserted that prices have been very well sustained, and it is undoubtedly true that this is the case in staple wools, but there is good reason to suppose that some concessions were made to move less desirable grades, both on account of the slackness of the demand and the unwillingness of dealers to carry this wool under present conditions in the money and goods market. Among the sales of the week were large lots of Montana and Idaho in the original bags at 25 cents for fine staple Montana and 24 cents for fine Idaho. Half blood Montana sold at 26½@27 cents, three-eighths at 27 cents, fine staple Idaho at 25 cents, fine Nevada at 22 cents, fine Idaho at 22 cents, and fine and fine medium Wyoming at 22@23 cents. Scattering lots of Colorado, New Mexico and Dakota also sold. Fleeces sold moderately well, fine washed delaine bringing 38½ cents, with unwashed at 31 cents. XX wool sold at 34½@35 cents, three-eighths Ohio at 33@33½ cents, three-eighths Michigan at 32 cents, quarter blood Ohio at 30½@31½ cents and quarter blood Michigan at 29½@30½ cents. California wools are quiet, though there are some sample bags being moved. Texas wools are out of stock. Staple Oregon is well sold up, though there is some valley offering. There is a little better demand for pulled wools. One mill took over 1,000 bales of New Zealand crossbreds, 50s to 56s, and there were small sales of fine merinos, prices ruling about unchanged.

Boston Shoe and Leather Market.

Sole leather dealers are holding their prices very firm. Owing to restriction of product, finished stock is not accumulating, and desirable grades are practically sold in advance. Upper leather is a little more active. Finished calfskins are being sampled very freely by buyers. An excellent trade has already been established, and new colors and finishes are extending the sales in new directions.

Patent leathers are about holding their own, although shoe manufacturers are discovering that the retail trade is calling for a larger portion of other lines. It is yet too early to measure the extent to which patent leathers will be replaced by competitive finishes. Kid manufacturers are depending upon colored goods to help out unsatisfactory conditions in that line. Further reports of concessions in side leathers are reported by shoe manufacturers, but dealers claim that prices have remained about the same for the past week or two. Hides are reported firm at present quotations, which are higher than tanners expect to pay. Business is quiet. Orders are still confined to immediate wants. Shoe manufacturers have about reached the end of the present run. It is a short season. Some factories are already taking inventories that are frequently not undertaken until November 1. Prices remain firm. Orders for fall goods are still received by mail, but, except that they may string along for several weeks, there is nothing to indicate any great volume of business from this source. Salesmen are out with samples for the large stock orders of spring goods, but returns are not yet sufficient to warrant any prophecies. A good business is, however, confidently expected. Shipments, as compiled by the *Shoe and Leather Reporter* this week, are as follows: Last week, 93,474 cases; preceding week, 93,450; last year, 106,791; total for 1907, 3,576,773; total for 1906, 3,740,869; decrease, 164,096.

WORLD'S HOP CROP.

Consul Bardel, of Bamberg, reports: "It is safe to say this year's world's hop crop will be fine in quality and large in quantity. That prices will be correspondingly low ought to be a natural consequence, particularly since in Europe as well as in the United States there are said to be considerable quantities of last year's hops still in the hands of growers and dealers. Some pessimistic dealers predict that hop growing this year will nowhere prove to be a very profitable enterprise. Following is a table of the estimated volume of hops produced by the different countries of the world, with figures of crops realized last year, for comparison. The figures quoted represent American hundredweights:

	*1907	1906

RAILWAY EARNINGS.

The railroads of the United States during the fiscal year ended June 30, 1906, enjoyed great prosperity, as compared with the previous years. According to figures of the nineteenth annual statistical report of the Interstate Commerce Commission, the gross earnings of the railroads in the United States were, for the year ending June 30, 1906, $2,325,763,167, which is $243,282,761 greater than for the year 1905. Their operating expenses were $1,536,877,271, or $146,275,119 more than in 1905.

The following figures present a statement of gross earnings in detail and show the increase of the several items over those of the previous year: Passenger revenue, $510,032,583—increase, $37,337,851; mail, $47,371,453—increase, $1,945,328; express, $51,010,930—increase, $5,861,775; other earnings from passenger service, $11,314,237—increase, $274,095; freight revenue, $1,640,386,655—increase, $189,613,817; other earnings from freight service, $5,645,022—increase, $564,956; other earnings from operation, including unclassified items, $60,004,087—increase, $7,684,939. Gross earnings from operation per mile of line averaged $10,460, the corresponding average for the year 1905 being $862 less.

The income from operation or the net earnings of the railways amounted to $788,887,896. This amount exceeds the corresponding one for the previous year by $97,007,642. The net earnings per mile of line for 1906 averaged $3,548; for 1905, $3,189, and for 1904, $2,998. The amount of income attributable to other sources than operation was $256,639,591.

The par value of the amount of railway capital outstanding on June 30, 1906, was $14,570,421,478, which was equivalent to a capitalization of $67,936 per mile for the railways in the United States. Of this capital there existed as stock $6,803,760,093, of which $5,403,001,962 was common and $1,400,758,131 preferred; the remaining part, $7,766,661,385, represented funded debt, consisting of mortgage bonds, $6,266,770,962; miscellaneous obligations, $973,647,924; income bonds, $301,523,400, and equipment trust obligations, $224,719,099.

Of the total capital stock outstanding, $2,276,801,333, or 23.46 per cent., paid no dividends. The amount of dividends declared during the year was $272,795,974, being equivalent to 6.03 per cent. on dividend-paying stock. For the year ending June 30, 1905, the amount of dividends declared was $237,964,432. Of the total amount of stock outstanding, $6,803,760,093, 12.60 per cent. paid from 1 to 4 per cent., 11.34 per cent. from 4 to 5 per cent., 7.60 per cent. from 5 to 6 per cent., 9.54 per cent. from 6 to 7 per cent., and 14.94 per cent. from 7 to 8 per cent. The total amount of funded debt (omitting equipment trust obligations) that paid no interest was $287,954,851, or 3.82 per cent. Of mortgage bonds, $208,060,486, or 3.32 per cent.; of miscellaneous obligations, $2,827,570, or .29 per cent., and of income bonds, $77,066,795, or 25.56 per cent., paid no interest.

Of the total amount of railway stock outstanding, $2,257,175,799 were reported as owned by railway corporations, and of railway bonds, $641,305,030 were so reported.

The report shows that on June 30, 1906, the total single-track mileage in the United States was 224,363.17 miles, or 6,262.13 miles more than at the end of the previous year. An increase in mileage exceeding 100 miles appears for Alabama, Arkansas, California, Florida, Georgia, Idaho, Illinois, Indiana, Louisiana, Michigan, Minnesota, Mississippi, Nevada, North Carolina, North Dakota, Pennsylvania, South Dakota, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin, Wyoming, New Mexico and Oklahoma.

During the year ending June 30, 1906, the number of passengers carried by the railways was 799,507,838, this item being 60,673,171 more than for the year ending June 30, 1905. The passenger mileage, or the number of passengers carried one mile, was 25,175,480,383, the increase being 1,375,330,947 passenger miles.

The number of tons of freight shown as carried (including freight received from connections) was 1,631,374,219, which exceeds the tonnage of the year 1905 by 203,642,314 tons. The ton-mileage, or the number of tons carried one mile, was 215,877,551,241, the increase being 29,414,441,731 ton-miles. The number of tons carried one mile per mile of line was 982,401, indicating an increase in the density of freight traffic of 121,005 ton-miles per mile of line.

The number of persons on the pay rolls of the railways in the United States on June 30, 1906, was 1,521,355, which is equivalent to an average of 684 employees per 100 miles of line. These figures show an increase in the number of employees, as compared with the year 1905, of 139,159, or 47 per 100 miles of line. Of the employees 59,855 were enginemen, 62,678 firemen, 43,936 conductors, and 119,087 were other trainmen. There were 49,659 switch tenders, crossing tenders and watchmen.

Remington Billing Typewriter
What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

SATURDAY, OCTOBER 5, 1907.

President Roosevelt set out on Sunday evening for a trip which will occupy the better part of a month, in the course of which he will have passed through a considerable part of the middle west and the south. His first stopping place was Canton, Ohio, where he delivered the oration at the dedication of the mausoleum erected to his lamented predecessor in the presidential office, Mr. McKinley. At Keokuk, Iowa, the President, after making another address, embarked for a steamboat trip down the Mississippi, the first he has taken on that great river in the course of his journeying about the country. On Wednesday he reached St. Louis, where he delivered still another extended address. This programme was repeated at Cairo, Ill., whence he went by steamboat to Memphis, Tenn., where he addressed the convention of the Lakes to the Gulf Waterway Association. It seems needless to say that the President has been greeted everywhere he has gone with most cordial demonstrations. His addresses have followed familiar lines, dealing with such themes as the need of national supervision of corporations, the duty of being prepared for eventualities, and the essential elements of efficient citizenship. Thus far the President's activity during his journey has deepened the general impression as to his amazing energy.

Secretary Taft's progress through Japan, where he arrived on Saturday morning, was characterized by features of a nature most gratifying to him. On his landing at Yokohama, in the midst of decorated shipping, he was greeted by committees representing the imperial household, the War Department, the Foreign Office and the municipality of Tokio, the capital city. At Tokio he was lodged in one of the ancient residences of the imperial family. At a dinner given in his honor by the municipality and the Chamber of Commerce of Tokio, he aroused the enthusiasm of the usually impassive Japanese by a speech in which he declared that Americans were proud to record the fact that Japan, whose half century's growth has been a marvel to the world, has always had the cordial sympathy and at times the effective aid of the United States. For a moment only, he said, a little cloud came over the sunshine of the fast friendship of fifty years, but only the greatest earthquake of the century could have caused even the slightest tremor between such friends. Nothing, he added, could be more wicked, more infamous, than the suggestion of war between two nations who have enjoyed such time-honored friendship and who have nothing to fight for. The Japanese journals have been profuse in their praise of the speech of the Secretary, whose visit and expressions of friendly sentiment are characterized as most opportune and as removing all apprehension that might have existed regarding the state of the relations between the two nations.

While Secretary Taft has been gathering diplomatic laurels in the Far East, Secretary Root has been making a triumphal progress through Mexico, where he has been received with every honor and with the greatest cordiality. Welcomed by President Diaz, himself one of the great public figures of the age, in the name of the Mexican nation, the Secretary has been fêted and banqueted in a most notable way, and a castle has been assigned to him as a residence during his stay. Mr. Root's specific mission to the sister republic is, as he announced at San Antonio, Tex., to discuss with the Mexican government matters relating to the republics of South America. At a dinner in that city he dwelt upon the importance of opening a new avenue through the Panama canal, which he declared to be a certainty, and he welcomed the growing closer relationship between the United States and the countries clustering along the Caribbean sea. When the historian of the future tells the story of the relations between the Americas he will have to devote no little space to the work of the statesman who is now enjoying the hospitality of Mexico.

More than one hundred representatives of the cotton manufacturing industry in foreign lands are now in the United States with the special object of attending the great conference of cotton growers, spinners and manufacturers to be opened at Atlanta, Ga., on Monday next. These visitors, coming from England, Germany, Austria, France, Italy, Spain, Belgium and Portugal, represent, it is said, 90,000,000 cotton spindles, while the American manufacturers represent 25,000,000 spindles. They were entertained by the members of the New York Cotton Exchange at a banquet in that city on Wednesday evening, and will be the recipients of many similar courtesies during their progress through the country, which will occupy some weeks. On Thursday they attended the convention of the National Association of Cotton Manufacturers at Washington, and on Monday they will participate in the proceedings at Atlanta, where they will meet representatives of the planters, ginners, compress companies, exchanges and, in a word, all the important interests connected with the production, handling and marketing of the great staple. After the close of the convention they will travel through the cotton district. The exchange of views which will result from this visit should have results of consequence to the world's commerce in cotton. It may be taken for granted that occasions of the kind will not be of infrequent occurrence in the future.

There has been manifested at The Hague within the last week or two a disposition to clear off the odds and ends of work with a view to hastening the end of the Peace Conference. At the seventh plenary session, held on Friday of last week, a number of proposals dealing with warfare at sea were disposed of. The conference approved the transformation of merchantmen into warships without restrictions as to the place where the change may occur, the United States not voting. Reports advocating the same laws and customs for the regulation of land and naval warfare and in favor of the inviolability of the mails were unanimously adopted. It was found impracticable to reach an agreement on the questions of blockades and the destruction of neutral prizes, and a report on the inviolability of private property at sea received one less than the two-thirds vote necessary for its adoption.

Another moderate surplus for the month of September has reduced still further the deficit for the portion of the fiscal year that has elapsed, so that at the close of business on Monday it amounted to only a little over $4,400,000. The receipts for the month just closed amounted to $51,438,482, a decrease of over $6,700,000 as compared with the preceding month, but of only about $58,000 as compared with the corresponding month of last year. The expenditures amounted to $48,536,000, a decrease of over $6,200,000 as compared with those for August, but an increase of over $8,200,000 as compared with those for September of last year. The receipts for the first quarter of the fiscal year amounted to $165,571,229, an increase of over $5,700,000 as compared with those for the corresponding period of last year, while the expenditures amounted to $169,987,136, an increase of over $16,000,000 as compared with those for the like period of last year. The excess of receipts over expenditures for the month, as will be seen from the figures given above, amounted to a little over $2,900,000. For the three months, as has been indicated above, there is still an excess of expenditures, the deficit in July not having been overcome yet by the surpluses in August and September.

An increase of over $16,600,000 for the month of September is shown by the Treasury figures of circulation, which give a total of $2,805,854,374 for October 1. Most of the changes are of minor consequence, the principal one being an increase of nearly $12,300,000 in gold certificates. Owing to the adoption of the revised estimate of the stock of gold coin recently made by the Director of the Mint, while the unrevised figures of last year are retained, the figures would seem to indicate that there has been a decrease of over $6,000,000 in the total volume of circulation as compared with a year ago, and that there has been a falling off of over $122,000,000 in the amount of gold coin and bullion in the interval. The fact, of course, is otherwise. Making the deduction suggested by the Director of the Mint from the figures of last year, it will be found that there was an increase of over $128,700,000 in the total volume of circulation, while the amount of gold coin has increased rather than fallen off. The circulation per capita, based on a population of 86,429,000, is put at $32.46. This represents a decrease of 62 cents from the figure given at this time last year, but a revision of the figures would show an increase of almost a dollar.

A movement for political reform seems to be really under way in China. A short time ago we noted the issuance of an imperial edict authorizing two highly placed Chinese officials to frame, in coöperation with the Grand Council, regulations for the establishment of a council of deliberation to aid the government in laying the foundations for a parliament. On Tuesday last the Dowager Empress, one of the notable political personalities of the time, issued a decree declaring China to be a constitutional monarchy. An edict issued on the following day warned the people of the consequences of misunderstanding the precise nature of the form of government it is intended to bestow on the country, which is a monarchical constitutional administration, and directed all branches of the government to explain the matter to the people. The municipal board has been ordered to prepare the people for the experiment of local self-government.

FAILURES, ASSETS AND LIABILITIES FOR NINE MONTHS.

A slightly larger number of failures and a heavily increased volume of liabilities, as compared with a year ago, are the leading features brought out in the nine months' failure returns compiled by BRADSTREET'S. This is due to the increase in the number of casualties and consequent enlarged damage shown in the second and third quarters of the year, as compared with the same periods of 1906. Though the failures show a slight increase as a whole over 1906, however, they are still below the number reported in any previous year, and it is owing to the occurrence of large failures, due in turn, no doubt, to money troubles, that the liabilities are so much larger than in recently preceding years. Other features of note are the expansion shown both in number of failures and in liabilities, as compared with last year, in the middle, northwestern and southern states, while New England and the central western states show a reduction in failures and failure damage. Another point brought out is that the increase in the volume of liabilities in the entire country can be explained by the enlargement in the liabilities reported in New York City alone.

Failure returns to BRADSTREET'S for the nine months of the present calendar year show 6,891 commercial failures, with liabilities of $111,238,064, an increase of only a fraction of 1 per cent. in the number as compared with the same period of 1906, but an enlargement of almost 25 per cent. in the liabilities of suspending concerns. The record indicates that the average small trader has not as yet been affected by the strain which larger, more extended interests have felt from the stringency in money, a feature attracting attention for many months past. An interesting side light on the extent to which otherwise solvent concerns have been affected by this cause is afforded by the percentages showing the proportions of assets to liabilities in the present as compared with preceding years. Thus the proportion of assets to liabilities in the nine months of the present year was 55.1 per cent. A year ago the proportion was only 49.9 per cent., while in the year 1904, a year of considerable strain, the proportion was 54 per cent. In other years, such as 1900 to 1902, inclusive, the proportion fell to as low as 47 per cent. It is, in fact, necessary to go back to 1897 or further to find so high a percentage of assets to liabilities. Following will be found the record of failures, assets and liabilities for nine months of the calendar year, with comparisons for twenty-five preceding years:

NINE MONTHS' TOTALS, UNITED STATES, FOR TWENTY-SIX YEARS.

	Number failures	Actual assets	Liabilities	Per cent. of assets to liabilities
1907	6,891	$61,305,529	$111,238,064	55.1
1906	6,866	44,316,174	89,522,183	49.4
1905	7,421	46,224,640	87,749,938	52.6
1904	7,718	62,127,790	114,805,832	54
1903	6,898	43,668,809	88,878,695	49
1902	7,452	36,466,826	76,784,151	47
1901	7,805	46,728,251	97,967,935	47
1900	7,093	41,027,586	86,754,988	47
1899	7,075	29,230,931	65,855,218	44
1898	8,355	52,742,809	102,107,887	51
1897	9,833	65,454,923	118,484,659	55
1896	11,280	99,613,765	171,350,292	58
1895	9,299	61,162,107	109,756,723	56
1894	9,251	59,707,031	110,674,934	54
1893	11,140	227,373,231	327,273,109	70
1892	7,378	30,209,701	76,971,771	51
1891	8,866	71,811,320	138,811,510	51
1890	7,538	44,450,712	92,541,950	48
1889	8,334	50,751,994	101,755,518	50
1888	7,330	44,649,552	83,941,991	53
1887	6,658	44,545,000	99,642,000	49
1886	7,518	37,397,000	77,110,000	48
1885	8,433	43,864,000	90,976,000	48
1884	8,303	108,452,000	195,951,000	55
1883	7,358	63,262,000	123,054,000	52
1882	5,307	36,542,000	71,162,000	51

It will be seen that the number of failures this year is the smallest with one exception during that period, while the liabilities are the largest with one exception, that of 1904, for ten years past, and only seven of the past twenty-five years show a larger total of failure damage.

The failures, assets and liabilities monthly and quarterly since January 1 follow:

	Number	Assets	Liabilities
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,601	9,888,052
May	755	5,290,090	10,546,963
June	675	10,869,132	17,706,398
Second quarter	2,163	21,785,823	38,141,413
Six months	4,791	41,993,823	76,546,299
July	733	8,716,782	13,931,290
August	673	5,014,826	9,375,992
September	694	5,580,098	11,384,483
Third quarter	2,100	19,311,706	34,691,765
Nine months	6,891	61,305,529	111,238,064

The returns by quarters show that in the first three months of this year failures fell off 5.8 per cent. in number, while liabilities were 9.7 per cent. larger than in the same period a year ago. In the second quarter of the year the failures increased 4.1 per cent., while liabilities were 58 per cent. larger than a year ago, and in the third quarter of the year the failures gained 5.1 per cent., while the liabilities were 14 per cent. larger than a year ago.

The responsibility of a comparatively few large failures for a large proportion of the liabilities has been already noted. In the nine months this year there were 175 such failures reported, with aggregate liabilities of about $60,000,000. This compares with only 116 failures with aggregate liabilities of $40,000,000 in the same period of 1906, 112 failures with $35,663,000 liabilities in 1905, and 180 failures with $61,298,000 liabilities in 1904. The striking resemblance between 1907 and 1904 in this respect is worth attention. In this item of large failures, too, it is interesting to note that contractors and builders suspending lead all others in the matter of liabilities involved. Thus a dozen building concerns, contractors and contracting engineers accounted for about $12,000,000 of liabilities, or one-fifth of the liabilities due to large failures, and one-tenth of the entire country's liabilities, while less than a score of financial institutions accounted for about $10,000,000 of liabilities.

Failures in New York City for nine months were more numerous than last year by 6.1 per cent., while the liabilities, owing to the occurrence of a comparatively few large failures, were nearly three times what they were in 1906, and were the largest recorded in that city since 1896. The following table shows the number, assets and liabilities of failures at New York City for nine months in each year since 1897:

	Number	Assets	Liabilities
1907	1,013	$16,568,466	$33,527,619
1906	954	4,078,084	11,422,788
1905	760	4,283,586	10,832,529
1904	984	6,478,777	17,605,864
1903	843	6,233,321	16,238,395
1902	983	6,382,590	17,622,934
1901	1,017	12,615,849	27,187,811
1900	912	12,645,141	28,592,774
1899	567	2,406,627	9,463,275
1898	543	11,724,319	22,979,361
1897	586	6,760,800	16,053,033

Canadian failures for nine months number 889, involving $6,902,012 of liabilities, a decrease of 1.3 per cent. in number, but an increase of 1.4 per cent. in liabilities, as compared with the like period in 1906. Failures, assets and liabilities in Canada

BUSINESS FAILURES, UNITED STATES, CANADA AND NEWFOUNDLAND, FOR NINE MONTHS, 1907 AND 1906, WITH ASSETS AND LIABILITIES.

States and Territories.	No. of failures 1907	No. of failures 1906	Assets 1907	Assets 1906	Liabilities 1907	Liabilities 1906

At the risk of repetition, but for the purpose of a clear understanding of the statistics under discussion, it is well, perhaps, to state that these statistics refer to failures in the clear and proper sense of the term. BRADSTREET'S definition of a commercial failure is that there must be some loss entailed to the creditors of individuals, firms or corporations engaged in strictly mercantile occupations. Failures of professional men (such as physicians, lawyers and actors), farmers, stockbrokers, real-estate dealers, bucket shops and old bankruptcies passing through the courts, are not included because they are not strictly commercial. Any or all of the above may be, and in fact are, dissociated from the recognized commercial operations of the country, and should not be, and have not been, included in BRADSTREET'S failure data. Comparison of the commercial failure reports prepared by BRADSTREET'S with those issued by other concerns cannot, therefore, be properly made.

BANK CLEARINGS FOR SEPTEMBER AND NINE MONTHS.

Figures of bank clearings are always interesting, but never more so than at this particular time, when there is so much talk of contraction in business. In fact, such data—these payments through bank clearing houses—may be taken as a good index of trade conditions, for they register the ebb and flow of matters in commercial channels more promptly than any other figures do. Therefore current and forthcoming monthly returns, taken in connection with other evidences of economic changes, such, for instance, as trade reports, will bear more than the usual degree of study. That there has been restriction of one kind or another has become quite obvious ere now. Indeed, the tendency of clearings as a whole since the advent of the current calendar year has been downward, the retrogression becoming more marked as the year progressed. Thus the latest returns, those for September, which cover the reports of ninety-seven cities in the United States, show that bank clearings aggregated $10,448,271,949, the decrease from September, 1906, being 15.8 per cent., and from September, 1905, 3.3 per cent. At the same time the loss as compared with the total for August this year is 9.6 per cent., and if the figures for September are contrasted with those of January, the high point of the year, the decrease is still larger, being 29 per cent.

It is of importance, however, to note that the bulk of the decrease reported occurred at New York, where contraction in stock market movements has been very noteworthy. Thus bank clearings at the metropolis in September aggregated $6,030,228,747, which sum represents a decrease of 27.4 per cent. from September, 1906, and of 12 per cent. from the like month in 1905. In this connection it should be pointed out that dealings in stocks decreased 16 per cent. from August this year and 53 per cent. from September, 1906, which, of course, goes a long way toward explaining the smaller bank clearings at New York. Outside of New York the total for September was $4,418,043,203, the gain over September, 1906, being 7.7 per cent., but it records a decrease of 5 per cent. from August, 1907, and is the smallest total, barring February's, that has been reported for eleven months past.

BANK CLEARINGS AT 115 CITIES FOR SEPTEMBER AND NINE MONTHS, 1907 AND 1906.

Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

Following are the gains or losses by groups, in percentages, shown in September and the nine months, as compared with the same periods a year ago:

	September	Nine months
New England	Decrease 6.2	Increase 4.6
Middle	Decrease 25.1	Decrease 10.8
Western	Increase 10.1	Increase 11.2
Northwestern	Increase 18.9	Increase 16.6
Southwestern	Increase 23.3	Increase 16.6
Southern	Increase 11.3	Increase 5.6
Far-western	Increase 4.1	Increase 21.3
Total, United States	Decrease 15.8	Decrease 4.7
New York City	Decrease 27.4	Decrease 12.0
Outside New York	Increase 7.7	Increase 10.0
Canadian	Increase 6.7	Increase 10.4

The middle and New England groups show losses of 25.1 per cent. and 6.2 per cent. respectively, while the heaviest increase is reported by the southwestern division, 23.3 per cent., followed by the northwest with an increment of 18.9 per cent. The south contributes a gain of 11.3 per cent., the west one of 10.1 per cent. and the far west 4.1 per cent.

Examination of the returns of some of the more important individual cities shows that New York, as heretofore noted, furnishes the heaviest decrease, 27.4 per cent. Boston, San Francisco, Philadelphia and Seattle also record decreases, to wit, 7.7 per cent., 8.4 per cent., 5.7 per cent. and 1.9 per cent. respectively. Kansas City returns an increase of 40 per cent., Tacoma one of 28.2 per cent. and Minneapolis one of 24 per cent. Chicago contributes a gain of 18 per cent. and St. Louis 13.1 per cent. Pittsburgh, the great industrial center, reports an advance of 3.3 per cent.

The total at all cities for nine months of this year aggegates $111,295,172,041, the decrease from the like period in 1906 being 4.7 per cent. At New York the total for nine months was $68,135,495,625, 12 per cent. less than last year. Outside of New York the total for nine months was $43,159,676,416, 10 per cent. over the corresponding period in 1906.

Canadian bank clearings in September aggregated $324,128,002, the increase over September, 1906, being 6.7 per cent. For the nine months the total is $3,074,539,928, 10.4 per cent. over the similar period in 1906.

HIGH MONEY RATES PROBABLE.

Increased demands for money at the south and west have been the natural sequence of the increasing movement of both grain and cotton to market. During the present week the transfers of money through the Treasury from New York to other centers have aggregated about $4,300,000, against $2,500,000 the week before, the figures, moreover, comparing with a small gain for the week before that. The fact that both the cotton and grain crops are late would account for the comparatively small volume of interior requirements for funds during September, but the general impression is that the high prices for cereals as well as cotton this season will offset any reduction in the amount of the former, and will necessitate heavy demands upon the New York banks from now on.

The New York money market is reflecting these circumstances. It was influenced only slightly at the beginning of the week by the preparations for the October 1 interest and dividend disbursements, as well as by the payment of some $11,600,000 involved in an installment upon Northern Pacific stock subscriptions. This, however, caused an advance in the call-loan rate on last Monday to 6 per cent., despite which renewals continued to be made at 5 to 5½ per cent. As the week advanced, however, the demands from the interior became more pronounced, leading to quotations as high as 10 per cent. for call loans, while on Thursday the renewal rate was between 7 and 8 per cent. In connection with this hardening of call money, time loans have shown an appreciable increase in firmness, the disposition of most lenders being to stand out for 6 per cent. upon arrangements on collateral running over the first of the year, and commercial paper is practically unsalable in the open market, even though 7 per cent. is quoted for prime names. It cannot be said that the money market is disturbed, in spite of the firmness which it exhibits. There is no evidence of apprehension, nor is it thought that there is a likelihood of a repetition of the extreme high rates which were touched last autumn, when, it will be remembered, call money was quoted at such an extreme figure as 40 per cent. The policy of the Treasury Department in increasing the public deposits is bearing good fruit, and not the least of the favorable influences in that connection is the knowledge that Secretary Cortelyou retains a reserved ability to place still larger sums with the banks than he has been doing.

IRON AND STEEL MAKING IN THE FAR EAST.

If current reports are true, some very important changes in the industrial as well as the political policies of China are either pending or in process of consummation. One of these relates to the new industrial policy of the government, which not only seeks to have the management and building of railroads placed in the hands of the Chinese themselves, but has directed that the materials needed in this development shall be produced within the confines of the kingdom. The other change is of a political character, and is foreshadowed in several recently issued decrees looking to the establishment of a constitution in the not distant future. This phase of the trend of affairs may to some extent be said to rest still in the realm of speculation, but there is a certain amount of evidence that the movement as regards matters industrial cannot be so characterized.

We learn from a letter written by a Shanghai correspondent of the Philadelphia *Public Ledger* that the Chinese have a steel-rail plant in operation at Han-Yang, situated about 700 miles up the Yang-Tse river from its junction with the Shanghai river. This plant, according to reports, is supplying the domestic railways now building with rails, and will be able in 1908 to supply the Philippines, Japan and all points of the Far East with railroad materials, including bridge work, cars and all the chief essentials for railway operations. It is stated that ore is abundant, that coal is within easy distance of the works and that labor is cheap. Twelve Bessemer and four open-hearth Siemens furnaces are either in operation or will be this winter, and, moreover, twenty sets of rolls for rails and other steel products are in working order. By the use of the open-hearth process the low-grade content of the ore is eliminated, and it is stated that excellent steel products are being turned out. The output of rails in 1908 will run from 5,000 to 8,000 tons per month. The management of the plant is in the hands of Chinese, though the heads of the technical departments come from Luxembourg, Belgium and Sweden. It is also intended to provide ample transit facilities for the shipment of coal from the mines to distant open markets, thus bringing the Chinese product into competition with the Japanese article.

In connection with this aspect of China's industrial policy, it will be readily recalled that a small shipment of pig iron, about 2,500 tons, was made from China to the United States last July, or just when our import movement was beginning to wane. The Chinese iron was imported as an experiment, but it was said at the time that the price paid yielded the producers a handsome profit. Whether the iron proved very serviceable we do not know, but reports then published indicated that it was of low grade, and that the experiment of going so far for pig iron was not likely to be repeated at an early date. In any event, the foregoing statements are worth recording as contributions to the economic literature of the day, but in the meantime we await more tangible evidence as to the part China is to play among the iron and steel producing countries of the world.

EDITORIAL NOTES.

No surprise was occasioned by the announcement on last Tuesday afternoon that the directors of the Anaconda Copper Mining Company, one of the most important constituent organizations of the Amalgamated Copper Company, had declared a quarterly dividend, payable on October 16, of only $1.25 per share, comparing with $1.75 per share at the time of the last quarterly distribution. As the shares of the Anaconda Company have a par value of $25, this action involves the placing of the stock upon a 20 per cent. annual dividend basis, instead of one of 28 per cent. per annum. The drop in the price of copper metal, and the decision of the heads of the Amalgamated combination to curtail the output of their mines at Butte, had made such a course practically inevitable, and the main significance attached to it has been that it would clearly indicate that a reduction in the dividend upon the parent company's stock will be made when the time comes for its directors to decide upon that matter. There is, however, some discussion as to how severe the cut will be in this case. The Amalgamated Company last July was placed upon a regular 8 per cent. dividend basis; that is to say, 2 per cent. quarterly. There is, in fact, a disposition to consider that the reduction may be a drastic one, involving, perhaps, the cutting of the present 8 per cent. rate in half, although it is urged that the change may be of a more gradual nature, and that the stock will be placed upon a 6 per cent. basis. Nothing definite can of course be obtained on this head, but it may be remarked that the reduction of the Anaconda dividend, and the general feeling that the Amalgamated's own dividend rate will be marked down, had comparatively little effect, even temporarily, upon the position of the copper stocks in the share market.

The crop reporting board of the Bureau of Statistics of the Department of Agriculture finds, from the reports of the correspondents and agents of the bureau, that the average condition of cotton on September 25 was 67.7, as compared with 72.7 on August 25, 1907, 71.6 on September 25, 1906, 71.2 on September 25, 1905, and a ten-year average of 67.8. The following table shows the condition on September 25 of this year and of the two preceding years, with the respective ten-year averages, also the condition on August 25, 1907.

	Sept.25, 1907	*Aug.25,* 1907	*Sept.25,* 1906	*Sept.25,* 1905	*10-yr av'ge*
Virginia	76	77	66	77	75
North Carolina	76	78	66	77	71
South Carolina	77	83	66	74	70
Georgia	76	81	68	76	70
Florida	69	80	64	76	71
Alabama	68	73	68	70	68
Mississippi	69	72	75	68	69
Louisiana	65	69	73	59	69
Texas	60	67	74	69	64
Arkansas	65	65	76	72	68
Tennessee	76	78	75	79	72
Missouri	72	75	82	81	76
Oklahoma	64	72	75	80	73
Indian Territory	67	70	74	78	72
United States	67.7	72.7	71.6	71.2	67.8

The area planted in cotton this year and the condition on September 25 compare with the area, yield and condition in six preceding years as follows:

	Area	*Yield*	*Condition Sept. 25*
1907	32,060,000	....	67.7
1906	32,049,000	13,510,000	71.6
1905	26,999,642	11,346,000	71.2
1904	31,730,000	13,565,000	75.8
1903	28,907,000	10,011,000	65.1
1902	27,878,000	10,727,000	58 3
1901	27,534,000	10,680,000	61.4

Conservative trade opinion, taking the above figures as a basis for estimation, favors the idea of a crop of about 12,500,000 bales.

One of the results of the recent clashes between state and federal authorities over railroad rate questions is the formation of a new organization to be known as the National Association of Attorneys-General of the United States. This outcome was reached as the result of a meeting held in St. Louis, Mo., on Monday and Tuesday of this week, at which attorneys-general or their assistants from thirteen states were in attendance. Before adjourning, the gathering adopted a memorial to Congress declaring that "the efficient administration as well as the preservation of our dual system of government requires that each sovereignty be permitted to exercise its function as defined by the Federal Constitution, unhampered by the other." This general declaration was accompanied by some specific recommendations addressed to the President and Congress. For example, it is urged that a law be enacted providing that no Circuit Court of the United States, nor any judge exercising powers of such Circuit Courts, shall have jurisdiction in any case brought to restrain any officer of a state, or any administrative board of a state, from instituting in a state court any suit or other appropriate proceeding to enforce the law of such state, or to enforce any order made by such administrative board, but allowing any person or corporation asserting in any such action in a state court any right arising under the Constitution or any law of the United States to have the decision of the highest court of such state reviewed by the Supreme Court of the United States, as now provided by law. Another recommendation is to the effect that suits in Federal Circuit Courts by persons interested in corporations, to restrain such corporations from obeying the laws of states in which they are doing business, be prohibited. What degree of permanence this new organization is likely to attain can only be conjectured. It does not seem to be a sectional one, for it includes men from Massachusetts and Ohio as well as from Missouri and Texas. It was announced at the closing session, indeed, that, with two or three exceptions, all the attorneys-general of the Union had expressed a desire to participate in the future proceedings of the association.

An important announcement was made this week from which it appears that the conflict which broke out three years ago between the Pennsylvania Railroad Company and what are termed the Gould interests has been amicably settled. The disagreement between these two financial parties originated in the extension of the Wabash system, controlled by the Goulds, into the Pennsylvania territory at Pittsburgh, and their purchase of the Western Maryland Railway, with the accompanying comprehensive plans to connect that line with the Wabash and thus create a Gould system of roads extending to the seaboard at Baltimore. The principal move of the Pennsylvania was to rescind the agreement whereby the telegraph lines along the Pennsylvania system east of Pittsburgh were operated by the Western Union Telegraph Company, which corporation is also controlled by the Gould interest, and to turn the same over to the Postal Telegraph Company. The Western Union Company, however, also had a contract covering the telegraph lines upon the portion of the Pennsylvania system west of Pittsburgh, which expired on October 1. It is now officially stated that, instead of turning the same over to the Postal organization, the contract with the Western Union has been renewed for a term of years. Furthermore, it is intimated that the harmonizing goes further than this, and involves a withdrawal of the Pennsylvania's opposition to the further plans whereby the Wabash is to be connected with the Western Maryland, and the scheme for the creation of what practically amounts to a transcontinental system of roads under Gould control carried into practical effect.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Stock—Improper Issue—Creditor.

The New Jersey Court of Errors and Appeals held, in the case of Easton National Bank vs. American Brick, etc., Company, that a creditor's knowledge that stock was improperly issued as "full paid" and as "issued for property purchased," when the fact was otherwise, was not sufficient to debar him from relief against the recipients of the stock.

Limitation—Suspension—Judgment.

The Supreme Court of Minnesota held, in the case of Olson vs. Dahl, that the rule that a new promise or part payment suspends the operation of the statute of limitations or revives and continues the cause of action is limited to contracts, express or implied, and does not include a judgment for the recovery of money, which is not a contract within the meaning of the term.

Negotiable Instrument—Insertion—Fund.

The Supreme Court of Kansas held, in the case of First National Bank vs. Lightner, that an insertion in a bill of exchange of the words "on account of contract" between the drawer and drawee does not amount to a direction to charge a particular fund so as to destroy the negotiability of the instrument, but merely to indicate the fund to which the drawee is to look for reimbursement.

Bill of Lading—Stipulation—Damages.

The Supreme Court of Illinois held, in the case of The Wabash Railroad Company vs. Thomas, that a stipulation in a bill of lading that a claim for damages for injury to freight must be presented within ten days after the freight is removed from the car could not be said as matter of law to be reasonable when applied to live stock, the character of the injury to which could not be determined within ten days.

Water Company—City—Liability.

The Supreme Court of Georgia held, in the case of Freeman vs. Macon Gas Light & Water Company, that a private waterworks corporation using the streets of a city on the condition that it should lay its mains therein and furnish the municipality and its inhabitants with a supply of water at fixed tolls, was liable as a public-service corporation for its wrongful act in cutting off the supply of water, which it was under a duty to furnish to one of its patrons as a member of the public at large.

Corporation—Subscribers—Liability.

The Supreme Court of Ohio held, in the case of Security Trust Company vs. Ford, that subscribers to the stock of a corporation organized under the constitution and laws of West Virginia could not avoid liability to pay full par value of their stock for the purpose of paying creditors, by inserting in the articles of incorporation, filed in the office of the secretary of state, a provision that the stock shall be sold at 50 cents on the dollar, and that when that is paid the stock shall be issued as fully paid and non-assessable.

Corporation—Advertisement—Agent.

The Kentucky Court of Appeals held, in the case of The Commonwealth of Kentucky vs. The F. W. Cook Brewing Company, that where a corporation declined to advertise its business in a newspaper, and its agent, for his own benefit and without the knowledge of the company, inserted an advertisement therein in which he failed to use the word incorporated, as required by section 576 of the Kentucky statutes, the corporation could not be held liable for the penalty imposed by said statute for such failure.

Seaman—Injury—Deviation—Liability.

The United States Circuit Court of Appeals for the Second Circuit held, in the Matter of Cuzco, that when the deviation of a vessel from her course, in order to procure medical attention for an injured member of the crew, would add substantially to the risks of the voyage, there must be some substantial exigency to justify it—at least reasonable ground to believe that consequences more serious than the mere pain and suffering which ordinarily attend the smaller catastrophes of a sailor's life are to be expected. In this case the cook of a steamship was injured by falling through a hatchway while the vessel was lying in Fortescue bay, Strait of Magellan. His injuries were treated by the master and steward. The vessel proceeded on her course to the westward until she reached Coronel, 1,100 miles distant, where surgical treatment was obtained. Owing to bad weather, it took seven or eight days to reach that port instead of five days. It appeared that by returning on her course seventy miles in the strait to Puntas Arenas, medical aid could have been obtained. The court held that in view of the belief of the master, after examination, that the injury was not serious, and of the danger of navigating the strait in the winter season, the decision of the master to continue the voyage rather than expose the vessel to the risks of a return was not unreasonable and did not subject the vessel to liability.

Insurance—Employer's Liability.

A policy insuring an employer against loss from liability for injuries to employees of the assured contained the stipulation, "No action shall lie against the company as respects any loss under this policy unless it shall be brought by the assured himself to reimburse him for loss actually sustained and paid by him in satisfaction of a judgment, within sixty days from the date of such judgment and after a trial of the issue." The Supreme Court of Kansas held (Carter vs. Aetna Life Insurance Company) that the policy with this stipulation was a contract of indemnity for the benefit of the insured, and that there was no right of action thereon against the insurance company until the assured sustained a loss by the payment of a liability.

Features as Property—Picture.

The Court of Chancery of New Jersey held, in the case of Edison vs. Edison Polyform Manufacturing Company, that an injunction would lie to restrain the unauthorized use of one's name by another as a part of its corporate title, or, in connection with its business or advertisements, his picture and his pretended certificate that a medical preparation which such other was engaged in manufacturing was compounded according to the formula devised by him, though he was not a business competitor. The court said: "If a man's name be his own property, as no less an authority than the Supreme Court of the United States says it is, * * * it is difficult to understand why the peculiar cast of one's features is not also one's property, and why its pecuniary value, if it has one, does not belong to its owner rather than to the person seeking to make an unauthorized use of it."

Bank—Insolvency—Charter—Extension.

In the case of State of Minnesota ex rel. Douglas, Attorney-General, vs. Savings Bank of St. Paul, a creditor of an insolvent bank, organized under chapter 23 of the General Laws of 1867, sought to procure an order directing the receiver to sell the bank's charter, which provided, among other things, for the distribution of net profits remaining after the payment of interest to depositors according to the shares of stock to the holders thereof. Subsequent legislation returned all the net profits to the depositors and prohibited trustees from having, directly or indirectly, any interest in deposits. The court held that such an order would have sanctioned the bank's continued existence after the discharge of the receiver and would have adjudicated that such existence should not be terminated by the judgment to be entered, and that such an extension of special privilege was against public policy.

Carrier—Special Damage—Notice.

The Kentucky Court of Appeals held, in the case of Louisville & Nashville Railroad Company vs. Mink, that for a breach of contract of affreightment, compensation for the loss sustained, which was within the contemplation of both parties when the contract was made, is recoverable; that in order to avail himself of the right to recover special damages, the shipper or consignee must give notice at the time of affreightment of special circumstances, such as the special or peculiar use or need of the article shipped; that the notice must be to that agent of the carrier with whom the contract is made, and must contain such matter as would reasonably and naturally inform the carrier of the conditions and probable effect of its breach, and that one who receives or discharges freight for a common carrier, being impliedly held out to the public as such agent, is the agent of the carrier for the purposes of such notices whether so employed by the carrier or not.

BUSINESS NOTES.

New York Clearing House Records.

The New York Clearing House Association held its annual meeting Tuesday. Manager Sherer's report containing the usual statistical matter was approved. Among the records for the year ended September 30, compared with those of 1906, are:

	1907	1906
Exchanges	$95,315,421,237	$103,754,100,091
Balances	3,813,926,108	3,832,621,023
Total transactions	99,129,347,346	107,586,721,115

The decrease in exchanges was 8.1 per cent. The average daily transactions:

	1907	1906
Exchanges	$313,537,569	$342,422,772
Balances	12,545,809	12,648,914
Total	326,083,379	355,071,686

Total transactions since organization of Clearing House (fifty-four years):

Exchanges	$1,856,617,161,435
Balances	86,285,126,899
Total	1,942,902,288,335

	1907	1906
Largest exchanges on any one day	$678,710,314	$686,844,890
Largest balances	31,669,894	42,331,709
Largest transactions	690,485,757	712,467,035
Smallest exchanges	141,988,656	143,848,416
Smallest balances	4,959,045	5,429,765
Smallest transactions	147,348,073	151,089,119

Seven Years of Railway Building.

"From the commencement of 1900 to the end of 1906, a period of seven years, the railway mileage of the United States grew from 190,833 to 222,635 miles of road, an increase of 31,802 miles, or 16⅔ per cent. Moreover, the length of second track, sidings and additional tracks increased from 62,581 to 88,569 miles, a gain of 25,988 miles, or over 40 per cent.," says the *Railway Age*. The following table shows the states arranged in their present rank in order of miles of line but not of total track, with their mileage at the commencement of 1907, and their mileage increase in the preceding seven years:

Rank	*State*	*Mileage*	*Increase*
1	Texas	12,609	2,887
2	Illinois	12,086	1,098
3	Pennsylvania	11,226	1,095
4	Iowa	9,844	731
5	Ohio	9,214	337
6	Kansas	8,919	170
7	Michigan	8,595	468
8	New York	8,315	189
9	Minnesota	8,102	1,333
10	Missouri	7,869	988
11	Wisconsin	7,403	941
12	Indiana	7,131	635
13	Georgia	6,704	1,106
14	California	6,385	930
15	Nebraska	5,961	367
16	Oklahoma and Indian Territory	5,638	3,541
17	Colorado	5,238	622
18	Alabama	4,805	754
19	Arkansas	4,383	1,295
20	Louisiana	4,140	1,476
21	North Carolina	4,096	440
22	Virginia	3,970	249
23	North Dakota	3,875	1,170
24	Florida	3,788	554
25	Mississippi	3,705	918
26	Tennessee	3,660	529
27	South Dakota	3,490	665
28	Kentucky	3,423	1,340
29	Washington	3,399	508
30	Montana	3,310	302
31	South Carolina	3,239	448
32	West Virginia	3,097	867
33	New Mexico	2,788	1,001
34	New Jersey	2,274	38
35	Maine	2,136	219
36	Massachusetts	2,107	*4
37	Oregon	1,931	300
38	Utah	1,918	345
39	Arizona	1,881	416
40	Idaho	1,681	410
41	Nevada	1,546	626
42	Wyoming	1,512	301
43	Maryland and Dist. of Columbia	1,409	45
44	New Hampshire	1,167	*7
45	Vermont	1,088	88
46	Connecticut	1,020	*5
47	Delaware	333	*16
48	Rhode Island	209	*10

*Decrease.

Nigeria and Cotton Production.

The New York *Sun* notes that a clause of public works loan bill, passed at the last session of the British Parliament, pledges the credit of the British government to the extent of $10,000,000 for the quick development of the cotton-growing industry of West Africa by means of a railroad running up the Niger into Northern Nigeria. "British experiments in cotton growing in Southern Nigeria are only five years old, and the annual output is thus far insignificant, the quantity grown in Lagos having merely increased from 500 bales in 1903 to 12,000 in 1907. If, however, the crop should expand at the same twenty-fourfold rate during the next five years it would amount in 1912 to 288,000 bales, and if the rate of progress should continue until 1917 it would then reach the portentous figure of nearly 7,000,000 bales. What this would mean will be appreciated when we recall that the total actual supply of the world in 1905-06 was but 14,072,000, of which the United States furnished not far from 12,000,000. Of course the maintenance of geometric progression seems on the face of things improbable, yet something like it occurred in our southern states for a time after the cotton industry was first started there. It may as well be taken for granted by our cotton growers that they may not be able forever to possess a monopoly of the world's cotton markets, even so far as the short fiber is concerned. The purveyance of the long sea-island fiber has long since been transferred from the United States to Egypt. If Great Britain is really disposed to apply the tremendous resources of her treasury to the development of the cotton industry in a promising and extensive region, there is no doubt that she might in time become a formidable competitor. That Northern Nigeria is such a region seems now to have been demonstrated."

Cotton Goods in Brazil.

Consul-General Anderson reports from Rio de Janeiro that although Brazil is importing more cotton goods than ever, the share of the United States in this trade is constantly dwindling. The general situation in the import trade of Brazil and the relation of American exporters to this trade is well illustrated in the following figures, showing the total imports for 1905 and 1906 of all classes of cotton goods and the share of the United States in the totals during those periods:

	Total imports, 1906	*From U. S.,* 1906	*Total imports,* 1905	*From U. S.,* 1905
Materials:				
Yarn for weaving	$428,368	$2,013	$501,534	$1,467
Sewing thread	1,676,401	3,303	1,509,039	5,404
Yarn, twisted and braided	28,584	372	34,321	9,952
Washed and combed	10,311	398	104,296	5,455
Waste	98,112	3,369		
Total materials	2,241,776	9,545	2,149,190	25,278
Manufactures:				
White cloth	2,278,977	51,474	2,266,202	76,756
Unbleached cloth	80,055	5,433	152,836	19,254
Printed cloths	3,039,875	174,926	3,324,087	356,329
Dyed cloths	3,213,142	170,387	3,729,850	238,571
Cloth not specified	4,182,337	172,547	2,759,534	197,484
Manufactures not specified	1,864,236	137,454	1,623,230	105,699
Total mfres imp.	16,900,398	721,766	16,726,785	1,019,371

Stripped of all unnecessary verbiage, it may be said the reasons for our insignificant participation in the cotton goods trade of Brazil are that we do not make goods suitable for the market, that the high tariff of Brazil works against the importation of our standard grades, and that we do not extend long enough credit.

Transactions on New York Stock Exchange.

Transactions in stocks on the New York Stock Exchange for the month of September aggregated 12,142,239 shares, a decrease of 2,360,574 shares as compared with the previous month and of 13,979,344 shares as compared with the corresponding month last year. In fact, it is necessary to go back to September, 1903, to find a smaller total. Trading in stocks and bonds, by months, is set out in the following:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,959,500
June	9,734,359	21,666,500
July	12,797,738	25,348,700
August	14,502,813	30,152,500
September	12,142,239	36,415,500
Total	155,901,239	329,963,100

Comparisons in stock dealings back to 1900 follow:

	September	*Nine mos.*
1907	12,142,239	155,901,239
1906	26,121,583	222,225,136
1905	16,092,702	187,005,492
1904	18,704,717	93,013,437
1903	10,713,440	122,166,358
1902	20,912,017	139,135,757
1901	14,030,762	216,521,405
1900	5,159,212	81,386,757

The feature of the month's bond market was the heavy trading in New York City 4½s, in which dealings began on the Stock Exchange on the 12th. Large amounts of Union Pacific convertibles also changed hands. The total sales of railroad bonds amounted to $24,944,000, of state bonds to $15,000, of government bonds to $1,817,500 and of New York City 4½s to $9,639,000, a total in all classes of bonds of $36,415,500, an increase of $6,263,000 as compared with the previous month, but a decrease of $8,370,000 as compared with the corresponding month last year. Bond dealings back to 1900 follow:

	September	*Nine mos.*
1907	$36,415,500	$329,963,100
1906	44,785,500	533,163,800
1905	68,881,900	793,150,200
1904	114,392,000	551,089,460
1903	45,275,800	496,218,050
1902	94,623,950	707,498,850
1901	44,684,100	767,977,520
1900	18,383,400	352,478,800

NEW YORK BOSTON CHICAGO

CURRENT BUSINESS NEWS.

Commercial.

This table, taken from the *American Agriculturist*, gives the comparative hop crops of the United States, in bales of 180 pounds each:

	Pacific coast	*New York*	*Total crop*
1907	226,000	42,500	268,500
1906	285,500	66,700	353,200
1905	230,000	52,000	282,000
1904	168,000	66,000	234,000
1903	155,000	50,000	205,000
1902	173,000	32,500	205,500

Prices are distressingly low. Estimated hop crops of the world, in bales of 180 pounds each:

	1907	1906
United States	268,500	353,200
England	224,000	155,000
Germany	286,000	265,000
Belgium and France	80,000	74,000
Austria and Bohemia	210,000	128,200
Russia	50,000	35,000
Canada, Holland, Australia, etc	21,000	22,000
Total	1,139,500	1,032,400

Total 1905	1,431,000	Total 1901	862,000
Total 1904	935,000	Total 1900	840,000
Total 1903	928,000	Total 1899	1,200,000
Total 1902	897,000	Annual average	1,030,000

Exports of copper in September were 17,157 tons, the largest, with one exception, of the year to date. The increase over August was 3,949 tons, while the decrease, compared with April, the year's record month, was only 106 tons. Compared with September last year, an increase of 3,038 tons is shown. Since January 1 exports of copper have been 126,594 tons, 28,042 less than in the corresponding period last year. This table gives the monthly comparisons, in tons:

	1907	1906	1905	1904
September	17,157	14,119	19,755	20,569
August	13,208	20,433	22,692	24,906
July	14,646	18,309	18,178	19,490
June	16,193	18,634	22,096	16,279
May	8,373	19,260	23,758	14,772
April	17,263	16,330	24,121	13,983
March	13,006	16,433	21,073	22,852
February	9,872	15,801	17,508	17,073
January	17,089	15,397	21,245	29,085

The *Journal of Commerce* reports the condition of cotton as of September 24 at 66.5, a drop of 7.4 points from August, and 5.4 points from September, 1906. Drought in all states is the principal cause of deterioration, but in Texas this is further increased by the prevalence of boll weevil, causing a decline of 11.6 points.

This shows how our foreign trade is running with the German empire. Eight months' trade, January 1 to August 31, is as follows:

	1907	1906	*Increase*
Exports to Germany	$152,171,496	$136,649,353	$15,522,153
Imports from Germany	108,676,367	92,650,365	16,026,002
Excess of exports	43,495,039	43,998,988	*503,949

* Decrease.

Of late months we have been buying more than we sold to Germany. Thus in August and July we see:

	July	*August*	*Two months*
Exports to Germany	$15,259,011	$13,351,438	$28,610,449
Increase	2,436,316	*592,639	1,843,677
Imports from Germany	14,672,857	15,779,247	30,452,104
Increase	2,990,189	2,386,642	5,376,831
Excess of imports over exports			1,841,655
Against same time last year, excess of exports			1,691,490

* Decrease.

Foreign crop conditions as published Tuesday in the Liverpool *Corn Trade News:* United Kingdom—Under favorable weather conditions threshing has continued to make favorable progress. France—Drought continues and is hindering plowing, but rains are predicted, and as a result offerings are liberal. Germany—Offerings continue to increase. The potato crop is expected to be an average one, of doubtful quality. Hungary—Drought continues and hinders plowing, but is favorable for corn and potatoes. Roumania—Drought continues, which is unfavorable for plowing. Wheat in growers' hands is reported exhausted. A very small corn crop is expected. Russia—The outlook for seeding is favorable. Arrivals at the southwest ports are light and at the southeast fair. Argentine—The outlook for the wheat crop was never better in the provinces of Cordoba and Santa Fe, and any danger from locust damage will disappear within a few weeks. The corn crop in the north is sprouting nicely, and in the center planting is proceeding rapidly, with the acreage planted for all crops showing an increase over last year. India—Latest advices continue unfavorable as a result of continued drought. Australia—Reports are unfavorable.

The potato crop of Aroostook county, Maine, which in an average season exceeds that of any other district in the world, will this year be less than one-half the normal size and much inferior in quality to last year's crop, which was an average one. The crop of tubers for this season will not exceed 8,000,000 bushels, which compares with a crop of 17,000,000 for last year.

Consul-General Anderson states that the people of Brazil cannot be made to believe that American manufacturers are producing more advanced machinery and better machinery than their competitors in Europe. At the present time there are close to 200 cotton factories in Brazil, having in all about 1,300,000 spindles and 45,000 looms.

According to the Census Bureau 1,569,977 bales of cotton were ginned to September 25. Total quantity 2,057,283 bales ginned last year to September 25, and 2,355,716 in 1905. Number active ginneries reported this year 18,152. Total operated to September 25 last year 20,416, and 21,389 in 1905.

The Ohio October crop report makes the condition of wheat 88, against 97 last year. Corn condition 74, against 104 last year.

Financial.

A regular quarterly dividend of $7.50 a share was declared on the capital stock of the United Metals Selling Company on Monday. This is the company that markets all the copper of the Amalgamated Copper Company, and of many other large producing companies, deriving its revenue from the commissions received on sales. It is credited with handling more than 600,000,000 pounds of copper a year. The capital stock of the company is $5,000,000, on which quarterly dividends of $7.50 have been paid since the first of the year.

According to the *Journal of Commerce*, total interest and dividends payable by various corporations in October amounted, in round figures, to $160,700,000, divided into $84,700,000 for dividends and $76,000,000 for interest. In October a year ago interest and dividend disbursements amounted to about $150,000,000. A summary of the October dividend disbursements, with comparisons with the same month a year ago, follows:

	1907	1906	*Increase*
Industrial	$19,933,165	$10,737,788	*$804,623
Steam railroads	38,792,000	36,620,990	2,171,010
Street railways	6,030,160	6,488,590	*458,430
Total	84,755,325	83,847,368	907,957

* Decrease.

The gross deposits of the national banks, trust companies and state banks of Greater New York on August 22, 1907, are thus set forth:

	Gross deposits	*P. ct. of whole*
National banks	$1,051,737,200	44.61
Trust companies	950,685,400	40.32
State banks	356,349,000	15.07
Total	2,358,771,600	100.00

The specie and legal tender holdings of these banking institutions on the date mentioned are shown as follows:

	Tenders	*P. ct. of whole*
National banks	$225,639,000	66.35
Trust companies	54,274,600	15.94
State banks	60,173,620	17.71
Total	340,087,200	100.00

The *Daily Bond Buyer* estimates sales of municipal bonds in September at $77,967,801. This total includes $40,000,000 sold by the city of New York on September 10, and also $26,849,275 placed by that municipality in July and August, but reported in September. Eliminating these amounts, the total is smaller than that for the corresponding month for the past six years, except 1902 and 1903, when the totals were $7,007,480 and $10,144,031 respectively. The total for September last year was $44,177,366.

On Tuesday, directors of the Anaconda Company reduced the dividend from $1.75 a share to $1.25 a share. As the shares are $25 par value, this means 5 per cent., or at the rate of 20 per cent. a year. The previous dividend was at the rate of 28 per cent. a year.

Default on interest of the underlying Chicago traction bonds was made Tuesday, the semi-annual payment on $1,600,000 4½ refunding bonds of the North Chicago Street Railway not being paid. The action in passing the interest payment is under the agreement between the city and the traction company's receivers providing for an extension of the time for accepting the ordinance.

Papers filed in the eastern states last month for new incorporations with a capital of $1,000,000 or more, including increases in capital, involved $76,000,000, which compares with $64,250,000 in August, and $167,750,000 in September, 1906. The grand total of all companies incorporated in September with a capitalization of $100,000 and over, including other states than those of the east, reached only $113,660,000, against $163,812,000 in August, and $242,035,000 in September a year ago. Comparisons for the eastern states follow, figures being from the *Journal of Commerce:*

	1907	1906	1905
January	$267,340,000	$411,945,000	$116,250,000
February	210,700,000	202,650,000	98,600,000
March	195,050,000	105,374,000	192,645,000
April	134,250,000	232,080,000	180,111,111
May	122,250,000	135,300,000	249,250,000
June	165,450,000	242,240,000	232,150,000
July	85,300,000	69,200,000	61,315,000
August	64,250,000	109,153,000	86,125,000
September	76,000,000	167,750,000	167,400,000
Total, nine mos.	1,320,590,000	1,675,689,000	1,383,846,111

The production of gold at the Rand in September is estimated at 540,000 fine ounces, against 555,037 fine ounces in August, and 505,111 fine ounces in September last year. The following table gives the output of gold at the Rand, in fine ounces, for a series of years:

	1907	1906	1905	1904
January	537,638	428,638	369,258	288,824
February	493,542	407,668	363,811	289,502
March	538,497	443,723	399,823	308,242
April	537,019	439,243	399,166	305,946
May	524,477	461,202	416,395	314,480
June	507,559	475,975	412,317	308,219
July	532,711	491,793	419,505	307,840
August	555,037	509,115	428,581	312,277
September	*540,000	505,111	416,487	312,286
October	....	540,609	415,527	325,625
November	....	533,373	424,757	336,167
December	....	550,167	431,594	362,264
Total	4,766,480	5,786,617	4,897,221	3,771,672

* Estimated.

At a general court of the governor and company of the Bank of England, Mr. W. Middleton Campbell, the governor, stated that the profits of the half year ended August 31, after making provision for all contingencies, were £657,751, making the amount of the "rest" on that day £3,681,065, and after providing a dividend of 4½ per cent., the "rest" would be £3,026,180. The directors proposed a half year's dividend of interest and profits of 4½ per cent. tax free. The dividends paid upon Bank of England stock for each half year and year since 1900 have been as follows:

	Year ended August 31—Per cent.							
	1907	'06	'05	'04	'03	'02	'01	1900
February, half	9	9	9	9	10	10	10	10
August, half	9	9	9	9	10	10	10	10
Year	9	9	9	9	10	10	10	10

At the annual meeting, Tuesday, the management of the American Steel Foundries Company outvoted the opposition by about 4 to 1. For several weeks a contest has been waged for the payment of dividends. All the propositions of the opposition were defeated by a vote of 195,000 to 56,900. The total number of shares outstanding is 330,500.

During September forty-six national banks, with aggregate capital of $1,957,000, were added to the system, of which thirty, with total capital of $782,000, were with individual capital of less than $50,000, and sixteen, aggregate capital $1,175,000, banks with individual capital of $50,000 or over. In the year ended September 30 charters were granted to 519 associations, but there was a loss to the system of eighty-seven banks by voluntary liquidation and three by failure. Number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, circulation secured by bonds, and by lawful money, on the dates set forth are as follows:

	Mar. 14, 1900	*Oct. 31, 1906*	*Sept. 30, 1907*
Number of banks	3,617	6,225	6,620
Authorized capital	$516,308,095	$845,939,775	$906,624,760
Bonds on deposit	244,611,570	539,653,180	559,624,760
Circulation on bonds	216,374,795	536,933,169	556,101,329
Circ., lawful money	38,027,935	46,238,816	47,885,785
Total circulation	254,402,730	583,171,985	603,987,114

Industrial.

According to the *American Federationist*, 1,895 labor unions, with an aggregate membership of 131,950, reported 5.8 per cent. without employment in the month of August. The ratio of unemployed in July was 1.7 per cent., and in August, 1906, the percentage of idle labor union members was 1.75 per cent. The figures reported for August this year are the most unfavorable announced since January, 1906, when the ratio of unemployed was 7.8 per cent.

The United States Steel Corporation has laid off over 100 pattern makers at the Homestead mills of the Carnegie Steel Company.

The volume of manufactured tobacco turned out during August, with comparisons, is thus reported by the *Western Tobacco Journal:*

	August, 1907	*July, 1907*	*August, 1906*
Tobacco, pounds	32,345,011	31,320,340	31,788,998
Cigars, number	662,756,540	649,368,767	654,393,270
Small cigars	73,922,000	97,190,555	85,425,666
Small cigarettes—			
At $1.08	402,116,037	367,707,574	367,552,537
At 54 cents	72,527,500	73,560,500	58,627,703
Total	474,643,537	441,268,074	426,180,240
Large cigarettes	1,340,880	1,399,520	1,154,300
Total	475,984,417	442,667,594	427,334,540
Snuff, pounds	1,942,801	1,596,306	2,057,778

The copper producers of the southwest are curtailing production. It is stated that the Greene Company has laid off 1,000 men at Cananea, the Copper Queen has laid off 450 in the Warren district of Arizona, and the Shattuck Company in Arizona has reduced its shipments 75 per cent.

According to the New York State Bureau of Labor, conditions of employment in the first half of 1907 were not so favorable as in the record year of 1906, but surpassed those of 1905, the next best year. Returns from unions having a membership of more than 93,000 wage earners, in eighty-five trades or occupations, show that the average monthly number of idle workmen was 147 per thousand in the first half of 1907, which compares with 104 in 1906, 151 in 1905, and an average of 164 for the first six months of the last five years. At the end of June, conditions of employment in nearly all trades were above the average. In New York City, where reside two-thirds of the 93,000 wage earners, labor conditions were more favorable than in any of the last five years, except 1906.

An official report shows that in September 1,481,307 cubic yards were excavated for the Panama canal. This compares with 1,275,404 cubic yards in August and 1,058,776 cubic yards in July. It is noteworthy that in September, 1906, only 292,000 cubic yards of material were taken from the Culebra cut, whereas 753,288 cubic yards were excavated in September, 1907.

It is reported that the General Electric Company has recently reduced its working forces by 3,000.

Railroads.

The Pittsburgh *Dispatch* is authority for the statement that the Lorain & Ashland Railroad is to connect with the Virginian Railway at or near Gallipolis, Ohio. Our contemporary also declares that the new railway company will eventually pass into the hands of the United States Steel Corporation.

E. H. Harriman and the Union Pacific interests on Tuesday severed their connection with the Chicago & Alton. Robert Mather was reëlected a director, and the place vacated by James Stillman, as a representative of the Union Pacific interests, was assumed by R. A. Jackson, president of the Rock Island. Edwin Hawley, as representing Clover Leaf interests, was elected to the place vacated by E. H. Harriman.

It was announced Wednesday that the Pennsylvania Railroad, after long negotiations, had renewed its contract with the Western Union Telegraph Company for its western lines. It was also intimated that the Western Union would get the contract for the eastern lines as soon as the present arrangement with the Postal Telegraph Company ends. The original contract was abrogated in 1903.

Stockholders of the Canadian Pacific Railway Company at their annual meeting Thursday authorized the issue of 4 per cent. debenture stock sufficient to finance several extensions to the road. Two additional steamships will be built or acquired either for the Pacific or Atlantic service and two for lake service.

Miscellaneous.

The report on the undelivered mail matter handled by the Dead Letter Office in September, 1907, shows that 1,005,990 pieces of mail matter were received and 235,961 pieces were returned to senders, as compared with 944,029 pieces received and 209,564 returned in September, 1906. Circulars and non-returnable letters to the number of 407,193 were destroyed last month, while in the same month last year 554,247 pieces of such matter were destroyed. The sum of $5,251.74 was found in the dead letters, and $4,371.64 was returned to senders.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade reports are irregular, some lines noting a relatively larger volume of business than at this time last year, while others indicate an opposite tendency. The disposition in many lines, particularly industrial, is to get back to an average good condition, allowing for the growth of the country, and without marked unsettlement. At the moment, however, business is of a filling-in order character, although some sections report an enlarged house trade, owing to fall carnivals. Retail trade, on the whole, has been hampered by unseasonable weather, temperatures being too high for the freest movement of staples. The country merchant appears to be having a good season, high prices for all kinds of farm products being the apparent stimuli. Indeed, one of the noteworthy features of the general situation is the firm disposition of the farmer to sell only when prices meet his views. Collections, while still dragging, in consonance with the tightness in money, appear to have improved at a number of centers. Some orders for early spring are being placed, but the volume of business done as yet is rather light.

Many industrial lines are less active on new business, and working forces in such lines as iron, steel, car manufacturing, electrical goods, shoe manufacturing and copper mining are being reduced. Lumber is less active and new building is lighter, due in part to the approach of the closed season, but more particularly to the stringency in money. The edge is off the demand for some lines of cotton goods and concessions can be obtained, but printed and woven dress goods are still very strong. Wool is active as never before this year, and coal is in demand, with a scarcity of cars in the west and of boats in the east affecting shipment and mine output. Strikes of shoe hands, silk operatives and furriers affect output at some centers.

Rates for money are higher and currency shipments to agricultural sections are very heavy. Stock speculation at the leading center is dull, with foreign selling a feature, while the industrials are weak. Monthly clearings figures reflect reduced stock speculation at New York in lighter September totals than in 1906 or 1905. Outside of the metropolis clearings still show gains over a year ago, but the aggregate for September is, next to that of February, the smallest of the year. Failures for nine months are slightly in excess of last year, but liabilities are 25 per cent. heavier, with building lines showing many large suspensions.

The crop situation is irregular also. Corn was hurt in Iowa by the frost of last week, and there are predictions of considerable soft corn in the 2,500,000,000-bushel crop now expected. Threshing yields in the spring-wheat northwest are lighter than looked for a while ago, but crops in the Pacific northwest are large and profitable. Wheat has recovered the loss of last week and is about at the highest of the year on reports of very large export takings. Cotton has been favored by good picking weather, but the August drought did damage in Arkansas, Texas and Alabama, and the farmers are reported still slow to sell on the slowly declining market. A crop of at least 12,500,000 bales is indicated by the latest government report, which points to an average condition on a next to record acreage.

Crop reports to BRADSTREET'S confirm last week's dispatches showing damage to corn in Iowa by frost of 10 to 20 per cent. Indiana, Illinois and Ohio also had some injury, and the northwestern sections report marked injury to the small acreage in those states. The crop in the rest of the belt is out of danger. Considerable soft corn is looked for this year, and the crop will not exceed 2,500,000,000 bushels. Unfavorable weather in the northwest retards threshings of spring wheat, which are turning out lighter than earlier anticipated. Crops in the Pacific northwest are large, were gathered in good condition and are bringing high prices. It has been a week of good weather in the south, and picking has progressed rapidly. Less satisfactory reports come from Arkansas and Alabama, where the August drought did more damage than earlier admitted. Farmers are holding in Texas. Reports from the lower Mississippi valley and the south Atlantic states are good.

A continued decline in the price of raw material and the slowness of demand for yarns and of cotton goods from first hands is thought to point to a readjustment of values of many goods for future delivery on a lower level. Yarn buying is restricted, and prices are weak at considerable concessions from a few months ago. Some large cotton printers are buying cloth rather than raw cotton to be made into those goods. Print cloths are easier and export cottons are irregular. Dry-goods jobbing at the east is of good volume, especially in cotton goods, and sales in September exceeded a year ago in most markets. Printed cottons and ginghams are especially scarce. Woolen yarns are in rather indifferent demand. Worsted mills are busy, but woolen goods for men's wear are rather dull. Retail trade is better than of late at the east, helped by cooler weather. The raw wool market is gaining strength as that in cotton and cotton goods wanes. The largest week's sales of the year were made at Boston, with sales of 25,000,000 pounds, of which the largest manufacturing interest has taken three-fifths. Territory wools have led with good-sized sales of fleece and clothing wools. Prices are no higher, but no concessions have been made to move wool, which is strong in view of the strength abroad.

The country's bank clearings as a whole continue to recede, this being, however, largely accounted for by the reduction of stock speculation at New York, the country's premier clearing house. Thus the grand total at ninety-seven cities is $10,448,500,374, a decrease of 15.8 per cent. from September a year ago and of 3.3 per cent. from September, 1905. New York City's total was $6,030,228,747, a decrease of 27.4 per cent. from September, 1906, while outside of the metropolis the total was $4,418,271,627, a gain of 7.7 per cent. on September last year, though a loss of 5 per cent. from August, 1907, and, with the exception of February this year, the smallest monthly total for a year past. For nine months the clearings at all cities are 4.7 per cent. below 1906, those at New York being 12 per cent. less, but at all other cities outside thereof they are 10 per cent. larger.

Failures for nine months are only slightly more numerous than a year ago, but liabilities, swelled by a number of large suspensions, are considerably heavier. Increased liabilities at New York City account practically for the entire excess over a year ago. There were 6,891 failures reported to BRADSTREET'S for nine months, with liabilities of $111,238,064, an increase of only a fraction of 1 per cent. in the number, but of 25 per cent. in the liabilities, as compared with last year. The records indicate that small traders have not yet been affected by the strain felt by larger or more extended interests from the stringency in money. The proportion of assets to liabilities for nine months is 55.1 per cent., the highest proportion noted since 1897, indicating a larger number of failures of usually solvent concerns. Building and contracting interests lead in the volume of liabilities reported by large concerns failing. New York City's failures are 6 per cent. more numerous than last year, while liabilities are three times as large.

Pig iron continues very dull, foundry grades being weaker. At the same time eastern producers appear to be more anxious to dispose of low-grade iron, concessions being made in order to effect sales. On the other hand, Bessemer pig iron is firm and scarce in the central west, owing largely to the inability of the furnaces to procure suitable ores. Bessemer as well as open-hearth billets are lower in price, west and east. Demand for structural material is good, and while there are a number of large orders pending, it is announced that a contract for 10,000 tons for a Pittsburgh structure has been postponed. The September contracts of the leading interest amounted to only 33,000 tons, 38 per cent. less than the bookings in August, but it is figured that the total business for the month was in excess of 120,000 tons, the bulk of the business going to independent plants. Competition for fabricated work is more active, and as a result the price situation is easier. Seamless tubes have been ordered freely by western agricultural implement manufacturers. Canadian consumers have taken 26,000 tons of wire. Some large orders for cast-iron water pipe are pending, but makers of merchant pipe are more concerned about business, and it is said that concessions have been made to influence sales. Domestic orders for steel rails are light, but a contract for 12,000 tons has been taken for the Manchurian railroads, with an additional 70,000 tons still under negotiation. The railroads and steel-rail interests have not agreed on the new specifications as yet, nor will they do so before November, and, in fact, the impression seems to be growing that after the new agreement is consummated decreased orders will be placed. Old material is weaker at some markets, though firmer at others, but, on the whole, the undertone is better. Copper is again lower, lake brands for future delivery being quoted at 14⅛ to 14½ cents and electrolytic at 14 to 14⅛ cents. At the lower levels foreign demand developed somewhat, but domestic trade is still of a hand-to-mouth character. The leading interests curtailed production considerably in September, but it is reckoned that the actual decrease was not very marked, owing to the increased outputs of other mines.

The New York stock market is dull and heavy, with considerable bearish activity, covering by shorts being the only apparent support to prices. High money rates have discouraged buying, and most of the week's incidents, including the reduction in the Anaconda dividend, the receivership of the Metropolitan Street Railway and the talk of further governmental action against railroads, resulting in an unsettled tone. Bonds are quiet and steady, the chief activity continuing to be in the New York City 4½ per cents. Foreign exchange is steady, demand sterling being 4.85.75.

Bank clearings for the week ending October 3 aggregate $2,899,979,000, 16 per cent. over last week, but 15 per cent. below this week last year. Outside of New York exchanges amount to $1,176,101,000, a gain of 8 per cent. over last week and of 4 per cent. over the week last year.

Business failures for the week ending October 3 number 177, against 166 last week, 136 in the like week of 1906, 189 in 1905, 195 in 1904 and 197 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending October 3 aggregated 4,731,950 bushels, against 4,876,737 bushels (corrected) last week, 4,917,021 bushels this week last year and 6,195,749 bushels in 1901. For the first fourteen weeks of the fiscal year the exports are 48,450,523 bushels, against 44,795,043 bushels in 1906-07 and 84,110,493 bushels in 1901-02. Corn exports for the week are 498,374 bushels, against 416,190 bushels (corrected) last week and 846,099 bushels in 1906. For the fiscal year to date the exports are 15,028,290 bushels, against 9,300,361 bushels in 1906-07.

IN CANADA.

Tight money has made for conservatism in buying, but trade in Canada is still fairly good, and retail business has been helped by cool weather. Recent rains have improved the pasturage in the eastern provinces, and the output of dairy products will be improved. This is particularly true of the fall make of cheese. Later reports confirm the estimates of a 30 per cent. loss in wheat from a year ago in the northwest, but higher prices will make the money return to the farmer less than 20 per cent. smaller than a year ago. There is a great deal of frosted grain, but the spread of mixed farming will allow of this grain being utilized, where a year ago it would have been totally lost. Monthly clearings and failure reports still make favorable comparisons with a year ago. Montreal reports retail trade better, and a good trade doing in fall clothing, hats, men's furnishings, hardware and boots and shoes. Shipments are large. Butter is higher on light make. Toronto reports fall trade brisk, reorders good, but collections still slow. Buying by retailers has been cautious. Western orders are still good despite crop damage. Tight money effects are felt in British Columbian industries, but retail trade is good and collections fair. Trade is rather more confident at Winnipeg, while collections are slow and money tight. Canadian failures for nine months are 889, with liabilities of $6,902,000, a decrease of 1.3 per cent. in number, but an increase of 1.4 per cent. in liabilities, over 1906. September clearings aggregated $324,128,002, a gain over September a year ago of 6.7 per cent. For nine months the total is 10.4 per cent. in excess of 1906. Weekly failures number 32, as against 36 last week and 22 in this week a year ago. Clearings for the week aggregate $83,220,814, an increase of 5 per cent. over last week, but a decrease of 3 per cent. from this week a year ago.

TRADE REPORTS.

At New York a good, active business is still reported for the past week in jobbing dry goods. September, with most houses, shows a large increase in sales over the corresponding month of 1906. The activity has shown especially in connection with silks, cottons and dress goods. Woolens and men's wear have not been so good, but the clothing business at present reports very fair sales. Jobbers of hosiery and knit goods have obtained good orders, and so far sales have been equal to 1906. Manufacturers of shirts, neckwear and gloves are doing an active business and have all the orders they can fill for the present. Although a few operators and employers have made concessions, the great majority of the fur trade is idle. Most of the made-up goods have been disposed of. There appears to be a fair amount of business being done in raw silks, but importers report business not up to expectations. Some curtailment in the number of looms in operation at the mills is noted, owing partly to strikes among the throwsters and the upward tendency of prices for the raw material. In the former case manufacturers are having some difficulty in obtaining thrown silks necessary for weaving. Flour receivers complain that buyers are only willing to take moderate lots. The underlying tone is strong. Wholesale grocers report trade conditions satisfactory, though tight money is felt. The firm tone of prices makes buyers liberal. Egg receipts are fair, demand good and market firm. Butter and cheese receipts are moderate, demand good and market firm. Poultry receipts are fairly moderate and demand fair. Prices for first grades of hay and straw are firm, while seconds favor the buyer. The tobacco market is quiet, with prices firm. The cigar trade is fairly active, prices steady and collections fair. The drug business is fair and conditions generally satisfactory. In the paper trade there is a good demand at stiff prices and good prospects for the coming season. The only complaint is in regard to collections, which are slow. Conditions and prices remain unchanged in cotton duck. There is a fair demand for jute cordage, but business is not as active as at this time last year. Business is excellent in

oakum, and manufacturers claim to be unable to keep up with orders. The automobile trade has shown some improvement, owing largely to weather conditions. Merchants generally in the hardware, china and kindred lines, also woodenware and brass goods trade, are purchasing only for immediate wants. On account of the condition of the money market and unsettled prices in some lines, there is still general complaint made regarding the difficulty in collections. There has been little change in real estate. Business is dull in all branches, auction room offerings being confined to a few foreclosures. Few plans for new buildings are being filed. Structural steel manufacturers continue busy and collections are reported fair. Pig iron is dull. Electrical manufacturers are doing a fair business but still complain of poor collections. In the machinery trade business is less active. Lumber and building material prices are generally maintained, but collections are slow.

The following telegrams show trade conditions at the cities mentioned for the week ending October 4:

BOSTON.—Jobbers of dry goods are doing a large business, and sales exceed a year ago. There is scarcity of stocks in many lines of printed cottons, and demand is active for those who have goods on hand. At prices offered, sellers are able to realize exceptional profits. Future buying of cotton goods in primary markets is more restricted, and a readjustment in values is looked for. Jobbers in dress goods have been doing an active business, but manufacturers of apparel report trade rather backward. Men's clothing at wholesale has been in good demand, and furnishing goods sales show considerable increase over last year. Between-seasons dullness prevails in the shoe and leather district. A hand-to-mouth business is everywhere evident, but here and there are those who expect the next run to be a record-breaker. The market for turpentine is unsettled, and wide fluctuations in prices are expected. Following a rise of 2 cents per gallon, there has been a decline of the same amount, and the market is reported as weak. In point of general activity, trade in drugs compares favorably with the preceding week. Dealers in dyestuffs and tanning materials report a light business, with prices steady. Business is of fair volume in furniture and carpets, but collections continue slow. Electrical supplies are in fair demand, and collections in this line show some improvement. Wholesale trade in anthracite coal is fairly active, the winter prices being established. Shortage of cars at wharf delays deliveries of soft coal, many vessels awaiting their turn to discharge cargoes. Standard grades of bituminous are in short supply. Northern and eastern lumber shows no material change. Southern lumber is firm and in fair demand. Western lumber and hardwoods continue quiet, but prices are firm. Paints and painters' supplies continue fairly active. Wholesale liquor dealers report an increasing trade in all grades of liquors, but general trade is only fair and collections are not up to the standard. There is no material change in the leaf-tobacco market. Manufacturers are busy, but are generally buying for immediate wants. Manufacturing confectioners report good orders for future delivery, and they are busy. Exports of apples are increasing, but it is anticipated shipments will not be equal to last season, owing to the scarcity of the fruit and high prices prevailing.

PROVIDENCE.—Continued activity is noted in the manufacturing jewelry trade, and many concerns are working extra time. Worsted goods are in strong demand. Jobbers in dry and fancy goods report a good fall trade. Collections are slow.

PORTLAND, ME.—The corn-packing season is over, with a pack estimated at 60 to 80 per cent. of normal. Factories generally are well employed.

PHILADELPHIA.—Dry-goods and notion jobbers report a fair trade but slow collections. Retailers are looking for a large fall business. Wool shows little change this week. Prices continue firm on desirable lots, and trading in worsted wools has been fairly active. Cotton yarn shows no improvement, and new business is slow, notwithstanding concessions. Manufacturers and jobbers of chemicals and dyestuffs report improved demand, but orders are coming in very slowly. Paints and glass continue in good demand, and there is every indication of active business. Collections are rather slow, but conditions are favorable, on the whole, and prices are firm. Retail lumber dealers are busy, but manufacturers and wholesalers are not satisfied with conditions, money being scarce and prices not steady. There is an improved tone in hides and skins, demand being fair and market firm. Leather has a better tone; prices are steady, but it is thought the bottom has been reached. Boot and shoe dealers report a fair volume of business; factories in some instances are working full time, but mostly on three-quarters or two-thirds time. Tobacco is selling better. Local cigar factories are busy. Fall trade in liquor has opened fair with wholesalers, but disturbed for distillers, who say that present prices do not fully cover advances in cost. Buyers seem disposed to take old goods, though costing a little more now, which stiffens the price. Collections are only fair. Reaction from a long continued period of unusual activity is becoming more manifest in the iron trade, business being light and prices low. Contracts keep furnaces occupied, and no stocks are being accumulated, but there are evidences of curtailment. The coal trade is good and prices advancing. Transportation to the eastern market is interrupted by inadequate facilities, consumers have not anticipated their wants as they have been accustomed to doing, and all indications point to a still stronger market.

PITTSBURGH.—While probably 95 per cent. of the furnaces in the Pittsburgh district are now in active operation and promise an increased production for this month, the market continues in the same stagnant condition as for some weeks past. At the same time the mills are constantly urging shipment of iron on contracts already in hand. Very little spot Bessemer is available, and the present nominal quotation of $22, valley furnaces, is firmly maintained. The finishing mills are receiving a fair volume of new business, but it is considerably less than at the same time last year. Standard grades of coke are strong at present quotations, and the surplus supply is limited. Off grades may be affected to some extent later on should the present copper situation result in the shutting down of some smelting furnaces. Prices for pig iron at the valley furnaces for immediate delivery are nominally as follows: Standard Bessemer, $22; chilled basic, $21; No. 2 foundry, $21.25, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.90 to $3, and foundry coke, $3.25 to $3 50.

BUFFALO.—Retail trade remains fairly active, and wholesale as well as jobbing houses report an increase in trade in dry goods, clothing and boots and shoes. The iron, steel and hardware houses report business active. Collections are more prompt than a week ago.

BALTIMORE.—Seasonable weather has aided in moving fall stocks, particularly of men's furnishings, and the volume of retail trade has been quite satisfactory. A fair number of buyers from tidewater and sections of West Virginia are buying in smaller amounts than last fall. Jobbers in dry goods and notions are receiving a number of reorders from southern merchants who did not buy as freely as heretofore, and as certain lines of merchandise are scarce, some delay will be experienced in deliveries. This additional business from the south is due to the good condition and the movement of cotton. The latter is also reflected in the balances of the country banks, which seem to be somewhat easier than in September, but no material improvement is expected in the local money market, as demands during October for discount purposes will fully tax loaning facilities. Wholesalers are in hopes that the numerous notes maturing during the current month will be paid, and from this source derive material financial assistance; and from present indications large renewals of country paper are not anticipated, particularly in the cotton sections. Fall weather has improved the shoe trade; prices are firm. The hide market is somewhat off, the demand being less this season than in 1906. Umbrella manufacturers report an increased holiday order business and are fully employed. Canned goods prices are quite firm and demand very strong, the season having practically started with bare floors, and the pack in some lines being materially less than last season. Maryland tobacco receipts show a falling off, with demand active and prices strong. Ohio is nearly all in, receipts being lighter and sales limited for want of better grade. Seed leaf shows a gradual improvement. The market in spirits is very active, with a slight improvement noted in collections. Turpentine and oils are firm. The paper market is strong and supply not fully equal to demand; mills are behind in deliveries.

CINCINNATI.—Trade, wholesale and retail, is good, dry goods, hardware, whiskey and lumber leading. Building continues to go forward, but lack of experienced workmen is a drawback. Shoes at wholesale are selling well at a slight increase, and leather is in good demand. Output of buggies and wagons during the year has been very large, this city now ranking second in that industry. Money is tight in the Kentucky towns depending on tobacco, as growers, who were receiving from 12½ to 15 cents per pound, now want 15 cents straight and refuse to sell. This keeps money from home banks and causes them to borrow out of town. Prospects are not good for the farmer.

CHICAGO.—Trade reports are more irregular than for several years past at this time. There are houses which are doing a larger business and report an increase in sales, while others say it is the reverse. All in all, there is a good volume of business under way in most lines. Dry-goods, clothing and shoe jobbers appear to have the best of it, and dry-goods sales for the winter and early spring trade are ahead of last year's. Consumption is going along steadily, and retail trade has been the largest of the season. With the iron and steel trade there are reports of a reduction in the working forces in a few instances, although they are not general. All have been working forces above the normal, and a reduction would bring them down to about the average. In a few instances car builders have curtailed their forces. Railroad supply interests say they are doing a good business. Buying of pig iron is small, and odd lots continue to be the main feature in sales, with prices rather easy. Coal cars are scarce, and shipments from the mines are restricted. Lumbermen are doing less than last year, owing to the high prices for money, labor and materials. Groceries are selling fairly. Butter, eggs and poultry are higher and potatoes lower. Money is firm and demand good. Currency shipments to the west are large. Collections are fair. Corn has been damaged 10 to 20 per cent. by recent killing frosts in Iowa, which caught 20 to 40 per cent. of the late corn, but in the best sections a large percentage of the crop was matured before the frost came. In Illinois, northern Indiana and Ohio there has been some damage from frost, and in the northwestern states a good deal, but how much it is impossible to tell. That there will be a larger percentage of soft corn this year than for a number of years is certain. It is also more certain that the crop will do well to make 2,500,000,000 bushels in the aggregate. Lower estimates on the yield per acre of small grains is expected to be shown in the coming government report than have been witnessed in recent years. Fall feed is generally good, and plowing for winter wheat is progressing more rapidly, as a good part of the dry sections has had rain within the past week.

PEORIA.—Trade, as a rule, is satisfactory with both wholesalers and retailers. Collections are fair.

LOUISVILLE.—Business in wholesale and manufacturing lines is fairly active. Clothing manufacturers have closed a successful fall business and are preparing for spring trade. Dry-goods jobbers report a good week, mostly in staple goods. Kentucky whiskey distillers and wholesalers report fall trade opening up in an encouraging way, and Kentucky whiskey merchants are making no complaints of the government ruling of labeling, which went into effect October 1. Drugs and groceries report a fairly active week, with business as good as last year. Retail trade has been stimulated by the annual horse show held this week. Money is tight and collections are slow.

ST. LOUIS.—In nearly all lines house trade is quiet, but the volume of filling-in orders taken by traveling men is exceptionally good. In clothing, several large orders for spring have been booked. Manufacturers of ladies' skirts and ready-to-wear suits are busy on back orders. Scarcity of experienced help in this line has caused many cancellations. The shoe-cutters' strike is still on, and there seems to be no disposition on the part of either side to give in. All of the large factories have closed down indefinitely, but manufacturers say they are experiencing no trouble in filling orders, as they have a large surplus stock on hand, and it is giving them an opportunity to reduce this stock prior to inventory. House furnishings, carpets and furniture show an increase over last week, but as yet trade is still behind last year's at this period. Groceries, drugs and provisions are active at firm prices. Hardware interests, both shelf and heavy, are busy, but the volume of business is not fully up to last year's. Building material also shows a falling off as compared with a year ago. Millers report the flour trade the best in years; prices are up, and they now have enough orders on hand to keep the mills in full operation for several months. Mill feed is also in good demand at fair prices. Export trade is good, with prices well maintained. Fall openings among department stores have stimulated retail trade, and a fair volume of business is being transacted. Collections in general are exceptionally good.

KANSAS CITY.—Trade in leading lines is of a filling-in order character, but the volume indicates that the country merchant is having a good season. Dry-goods salesmen are covering their territories, and early orders for spring delivery show an easy feeling as to the future. Trade in jewelry and novelties for the holidays is good. Local festivities have stimulated all retail lines. Collections are good. The corn crop is in good condition.

MILWAUKEE.—Jobbers report an active demand for seasonable goods. Retail trade is somewhat quiet, owing to rainy weather. Collections are fair.

SIOUX CITY.—Killing frost occurred in some portions of the state, but 80 per cent. of the corn crop is clear of frost. Trade in all lines is fair. Collections are good.

DAVENPORT.—Retail trade is good. Business in September in most cases equaled the corresponding month last year. The weather is about normal, with frequent showers. Collections are fair. Demand for money is good.

ST. PAUL.—Current business is good in all lines, and orders for future delivery are exceeding last year's. Collections are fairly good, and for the month of September were just a little ahead of last year. Unsettled weather is a hindrance to wheat threshing, and the meager reports received indicate smaller returns than were estimated. Very little flax has been threshed, and the yield is still problematical. Considerable grain is still uncut, but it has ripened and is out of danger of frost. The outlook continues favorable for increased business, due mainly to the high prices for grain. Money is still high.

MINNEAPOLIS.—Staples in all lines are in good demand, but in seasonable merchandise cold weather is needed to make things move more freely. There is a fair crop movement, except in wheat, which is coming in slowly. Collections are improving. Lumber is quiet. Flour is quieter than usual at this season.

OMAHA.—Trade, wholesale and retail, is active. The annual fall carnival has brought a large number of country merchants to the city, and wholesalers report house sales exceptionally large. Collections are about normal. Corn is now out of danger from frost.

LINCOLN.—Trade is favorable. Collections are fair.

CHARLESTON.—Wholesale trade continues good, and jobbers seem well satisfied with the present condition of the country. The tobacco market is booming, and prices are good. Cotton is in excellent condition. Collections are good.

SIOUX FALLS.—Trade is steady, and the volume is ahead of last year's. Collections are better than for several years.

RICHMOND.—Wholesale dry-goods dealers are in receipt of moderate orders for fall goods. Wholesale dealers in and manufacturers of shoes and rubber goods are at the close of one of their most successful seasons; they are preparing samples for spring, and the outlook is encouraging. There is more activity in produce, and prices are higher. A number of organizations and attractions have brought visitors to the city in large numbers. Retail trade and collections show improvement. There is no decrease in the demand for money.

AUGUSTA.—Trade in all lines is active. Collections are still slow.

ATLANTA.—Business in retail lines is active and wholesalers report good business, with collections much better. The weather continues favorable for cotton picking and farmers are gathering crops as rapidly as possible. Some fear is expressed that an early frost will materially lessen an already short crop.

BIRMINGHAM.—Lumber is slightly improved. Cotton is coming in more freely. Collections are fair to good.

MOBILE.—Jobbing trade in all lines is active, with collections fair. Favorable weather prevails and cotton is being picked rapidly.

MONTGOMERY.—Business in jobbing lines shows some improvement. Fall openings in millinery lines have drawn large crowds. Collections are fair. There are complaints of cotton deterioration and poor fruitage and of the disappointing outturns at the gins in all sections of Alabama. High temperatures during August made it an early crop, and planters suffered severely until the rains of the middle of September. The possibilities of this crop will be determined by the frost date, which becomes an all-important factor as far as the yield is concerned.

CHATTANOOGA.—Trade conditions in all lines are satisfactory. Weather conditions are favorable. Collections are good.

KNOXVILLE.—A slight improvement is noted in retail trade generally, but warm weather depresses business in seasonable goods. In clothing, millinery and dress goods business is only fair. Deliveries of canned goods are being made on contract at summer prices, but, owing to a scarcity of preserving fruits, present quotations are higher and tend upward. Jobbers and canners expect an advance, and are disposed to limit business to current needs. Real estate transfers for September were lighter than for several months, but showed an increase of 25 per cent. over September, 1906. Building material is in fair demand, local dullness being offset in a measure by orders from the outside.

MEMPHIS.—Wholesale business is improving. Retail trade is quiet owing to warm weather. Collections are slow. Cotton picking is under way. A car shortage is delaying freight shipments.

NASHVILLE.—Unseasonably warm weather has temporarily retarded retail business, but wholesale business is favorable. Collections are fairly good.

LITTLE ROCK.—Business, wholesale and retail, continues brisk and collections are good. Drought has cut the cotton crop short, but the grade is high and good prices will be realized.

NEW ORLEANS.—General trade is inclined to be dull, but some lines report considerable activity. Labor troubles on the levee interfere with all departments of business and indications point to an increase of the disturbance. Crop conditions are good.

FORT WORTH.—Farmers are holding cotton for better prices. Picking is well under way. With favorable weather trade is increasing and collections improving.

DALLAS.—Jobbers as a rule report trade satisfactory for the season, but with the retailers trade is quiet. Collections are slow. Cotton picking is in active progress and the product is being ginned rapidly, but sales are light as the farmers are inclined to hold this season.

WACO.—Jobbers report good business. Collections are fair. Farmers are holding cotton for better prices.

SAN FRANCISCO.—Construction work shows considerable improvement. The crop outlook is good. Retail trade shows slight improvement. Collections are very slow.

SEATTLE.—There has been considerable activity in Alaskan shipments owing to the closing of navigation. The lumber and shingle market remains quiet because of the continued car shortage. Collections are good.

SPOKANE.—Harvest is practically over and the returns are very large. Prices are good. Farm property is selling well. General trade is active. Collections are fair.

TACOMA.—Trade is good. Building is active, with real estate quiet but firm. Collections are fair to good.

TORONTO.—Fall retail trade has been quite brisk, cool weather favoring business. Wholesalers are experiencing a good reorder movement, and winter lines are going out satisfactorily. The general outlook for the trade of the coming season is bright. While collections are still slow, money tight and all credits are limited, there is still a feeling of confidence regarding the future. These conditions are the result of conservative measures instituted by the banks and big jobbing houses, and it is generally felt that such measures have served their purpose. A big season's trade has been done, but the retailers have been cautious in their ordering. A good sorting trade is expected to open up early in the season. The movement of goods just now is heavy, and shipments will be large until the close of navigation. Special efforts are being made to send out western shipments. Orders from the west are still good, notwithstanding the reported damage to crops. An excellent wholesale grocery trade is moving. Prices generally hold firm, and on canned goods particularly so. The hardware trade is brisk. Orders for all winter lines are good. Receipts of country produce are still light and values well maintained. The make of dairy produce is increasing, owing to the improvement in pasture, the result of recent frequent rains.

MONTREAL.—There has been a rather brisker tone to retail trade here and in the surrounding country. Cool, damp weather has started fall clothing moving. Business in men's furnishings has been particularly brisk. The hat trade has been large, and there has been a big call for nearly all lines of haberdashery. Heavy dry goods continue to move well, although retailers still show reasonable conservatism in placing orders. This is practically true in all lines of business at the present time. The policy of the banks in restricting loans and advances is undoubtedly having some effect in limiting the volume of trade to some extent in all parts of the country. Wholesalers here are inclined to expect a good reorder trade to spring up soon, as they believe the business of the country during the coming season will be rather better than most people at present expect. The hardware trade is taking on a better tone. From now until the close of navigation shipments in this line will be heavy. There is still some quiet in demand for builders' supplies. Quite a brisk trade is doing in groceries. Values are firm. The boot and shoe factories are busy, and the demand for these goods is quite active. Leather prices are easy. Butter prices have gone up, owing to the light make and brisk demand. Cheese prices are also firm. Recent rains have done much to improve pastures, and it is hoped that the make of fall cheese will be a fairly heavy one on that account.

VANCOUVER-VICTORIA. — General trade continues brisk. The shortage of money in other parts of Canada is, however, lessening activity in most provincial industries. Demand for lumber has fallen off. Owing to the difficulty the employers have in obtaining sufficient labor this is not so serious as it might be. The smelters in the interior are still suffering from a lack of coke. There is a good tone to the retail movement, and collections are fair to good.

WINNIPEG.—Trade is generally showing a good tone here. There is a feeling of confidence as to the future that was hardly in existence a week ago. The most likely estimate of crop damage places the amount at about 30 per cent. of the total crop, but owing to high prices returns to the farmers will run about 20 per cent. less than last year. Collections are still slow and money is tight. Threshing returns are generally showing a very excellent quality of wheat, although the amount of frosted grain will be large. In former years this grain has been very largely lost, but owing to the growth of mixed farming it can now be profitably used as feed in most districts.

Money Market.

The New York loan market showed a decided disposition to harden this week, mainly as a consequence of the heavy calls for money from the south and west for crop-moving purposes. The New York banks, it is estimated, have lost on the weekly movement about $4,000,000, and the curtailment of the supply of funds was also supplemented by the shifting of balances incident to the October 1 interest and dividend payments. Call money rates consequently touched 8 per cent. early in the week, and on Wednesday ran up to 10 per cent., the renewal rate for such arrangements, which had been as low as 4½ per cent. at first, being on Thursday 7½ per cent., while on Friday 6 per cent. was the prevalent quotation. There has also been an increased demand for time money. This is supposed to result largely from the failure to renew maturing foreign loans, thus bringing Wall street borrowers into the local market for four months' money, that being the kind of loans for which there is the greatest demand. Under these circumstances the lenders generally stood out for 6½ per cent., and bids were plentiful at 6 per cent., a considerable amount of business being reported at such figures. Commercial paper is absolutely dull, with very little buying demand, although 7 per cent. is the only figure quoted.

New York Banks.

Last Saturday's Clearing House statement showed a loss of $3,216,000 in the cash averages, which, however, was some $2,000,000 less than the estimated actual decrease for the week in the holdings of the associated banks, resulting from the drain of money to the interior, which now seems to have begun in earnest. The loans increased $2,772,500, which probably represented in part averages carried over from the preceding week. Deposits were $1,829,900 smaller, or a million or so more than was called for by the two last mentioned changes. This, however, lessened the reserve requirements by $457,475, so that the loss in the surplus reserve was $2,758,525, the figures of the statement comparing as follows with those of the preceding week:

	Sept. 28	Sept. 21	Changes
Loans	$1,100,351,500	$1,097,579,000	I. $2,772,500
Specie	198,807,900	202,396,500	D. 3,588,600
Legal tenders	70,637,100	70,264,500	I. 372,600
Deposits	*1,055,193,700	1,057,023,600	D. 1,829,900
Circulation	50,638,500	50,658,400	D. 19,900
Total reserve	269,445,000	272,661,000	D. 3,216,000
Reserve required	263,798,425	264,255,900	D. 457,475
Surplus reserve	5,646,575	8,405,100	D. 2,758,525

The following shows the relation between the respective dates:

	Sept. 28, 1907	Sept. 29, 1906	Sept. 30, 1905
Loans	$1,100,351,500	$1,051,172,800	$1,071,630,300

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending October 3 shows an aggregate of $2,899,979,000, as against $2,477,849,000 last week and $3,420,618,000 in the corresponding week last year. Canadian clearings for the week aggregate $83,220,000, as against $78,525,000 last week and $86,168,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	October 3	Inc.	Dec.	September 26
New York	$1,723,877,000	....	24.8	$1,395,625,000

Foreign Exchange.

During the earlier portion of the week the exchange market of New York developed considerable strength. There was a rather small supply of commercial bills, and a rather active demand for remittances, which was partially due to the transfer of October dividend and interest to the foreign centers, though the main cause was thought to be the repayment of loans made abroad. This last view was borne out by the fact that the inquiry for time loans in the money market was much greater. Actual rates for demand sterling, which had sold at below 4.85.50, advanced to 4.85.85 by Wednesday, on which day the posted rates were advanced ½ cent, making the nominal quotations 4.83½ @4.87. On Thursday the inquiry fell off rather sharply and a considerable amount of cotton bills made their appearance, resulting in renewed weakness, so that the posted rates were again marked down to 4.83@4.86½, while actual business for demand sterling receded to 4.85.45@4.85.55. On Friday the market was strong on renewed buying, the actual rate for sight recovering to 4.85.75.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Sept. 28	*Sept.* 30	*Oct.* 1	*Oct.* 2	*Oct.* 3	*Oct.* 4
4.83 @ 4.86½	4.83 @ 4.86½	4.83 @ 4.86½	4.83½ @ 4.87	4.83 @ 4.86½	4.83 @ 4.86½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.60 @ 4.85.70	4.85.35 @ 4.85.55	4.85.50 @ 4.85 85	4.85.75 @ 4.85.55	4.85.45 @ 4.85.55	4.85.60 @ 4.85.75

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.81.90 @ 4.82.00	4.81.85 @ 4.82.00	4.82.00 @ 4.82.40	4.82.05 @ 4.82.30	4.82.00 @ 4.82.05	4.82.05 @ 4.82.20

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.50; commercial bills, 4.81¼ @4.82⅛; francs, 5.20⅝ less 1-16@5.17½ less 1-64; reichsmarks, 94 less 1-32@94 1-16 less 1-64.

The Bank of England's discount rate was left unchanged at 4½ per cent. Its return for the week showed a loss of £1,661,829, and the proportion of reserve to liability fell from 51.30 per cent. to 48.86 per cent. In the London open market call money was comparatively easy at 3@3¼ per cent., discount being 4@4⅛ per cent. The Bank of France showed for the week a decrease of 16,100,000 francs in gold. Its rate remained unchanged at 3½ per cent., the Paris market quotation being 3½ per cent. At Berlin the bank rate is still 5½ per cent., and the market quotation for discount is 4¾ @5 per cent.

New York Securities Market.

There were a number of developments during the present week which interested the stock market more or less, but the principal influence was money. The west and south are now drawing heavily on New York for funds with which to move the crops, while the banks, in spite of the help which the Treasury has extended, are so low in respect to their reserves that they have been forced to exercise conservatism. The October 1 disbursements, involving considerable shifting of balances, was also an influence, though the rise in the call-loan rate to 8@10 per cent. and the fact that renewals advanced to over 6 per cent. were mainly the result of the calling in of loans by institutions which felt obliged to strengthen themselves to meet interior demands. This situation naturally discouraged buying of stocks and emboldened the operators on the bear side, who, as was pointed out last week, had shown a tendency to renew operations for a decline. The trading was almost entirely professional, the public continuing to show much apathy, and Europe was hardly a factor, apart from some speculative selling. Throughout the week price movements were irregular, owing to the tendency of the heavily extended short interest to cover from time to time, so that the market represented a series of drives, followed by buying by the bears, with resulting sharp, though temporary, advances in different directions.

There were a number of incidents of decided importance, such as the announcement that a receiver had been appointed for the Metropolitan Street Railway Company, the result being decided heaviness in that group. The reduction of the Anaconda Copper Company's dividend rate for the quarter from $1.75 to $1.25 on Tuesday caused heaviness in the copper shares, but they temporarily rallied on covering, displaying marked irregularity thereafter, though it is generally believed that the Amalgamated dividend will surely be reduced. Canadian Pacific was more or less of a feature. It was heavily attacked on Monday, selling down from 171 to 157, with a rally to 170 on the following day. St. Paul was also under decided pressure, its weakness being accompanied by talk about a reduction in the next dividend, but the fact that the selling of the stock had been by the bears was shown by the promptness with which it rallied when a prominent director was quoted as saying that the dividends were in no danger. New York Central was unfavorably affected by the report that it was negotiating a $50,000,000 loan abroad. Brooklyn Rapid Transit showed a tendency to improve in the face of the weakness in the other tractions, the talk being that its forthcoming annual report will be a very favorable document. One of the objects of bearish attacks was the United States Steel issues, especially the common, this movement being based on further rumors of reduced demands and orders for steel. In the latter part of the week a number of low-priced stocks were taken in hand by the bears and yielded rather sharply, some of them, notably Colorado Fuel, Southern Railway, Wabash and other similar issues, touching the lowest prices they have seen in a long time. On Friday the market was dull but showed a certain amount of firmness, indicative of an oversold position on the part of the bears.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Sept.* 27, 1907	*Sept.* 20, 1907	*Sept.* 28, 1906
American	1,513,223	1,385,575	1,194,227
Other kinds	811,062	868,047	772,000
Total	2,324,285	2,253,623	1,966,227

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Sept. 27, 1907	*Sept.* 20, 1907	*Sept.* 28 1906
Great Britain and continent	1,266,000	1,280,000	808,000
Egypt	31,000	24,000	32,000
India	435,000	457,000	509,000
United States	502,000	493,000	617,000
Total	2,324,000	2,254,000	1,966,000

Wool Markets.

The largest aggregate business of any week this year has been done during the past week in a strong and exceedingly active market. The total sales are estimated at about 25,000,000 pounds, the American Woolen Company being reported as taking upward of 15,000,000 pounds. The buying has been general, however, all the larger worsted mills having purchased more or less heavily, those mills which have been holding off coming into the market freely. The main factor in the sudden activity has been the extreme firmness of all foreign markets, the mills recognizing that when the domestic supply is exhausted, further supplies will be obtainable only at very high prices. The sales have been principally of territories, with good-sized lots of fleeces and clothing wools. There has been no cutting of prices to move these wools, but prices have not been advanced. The sales of territories were largely Wyoming and Montana, with some lots of Idaho. Fine staple territories sold at 25@25½ cents, half blood at 26@26½ cents, three-eighths blood at 27@27½ cents and quarter blood at 26½@27 cents. Western Idaho in the original bags sold at 24 cents for fine, 25 cents for fine staple and 25@26 cents for half and three-eighths blood. Clothing Idaho and fine Idaho brought 22 cents. Ohio half blood fleeces sold at 33½ cents, three-eighths blood at 33@33½ cents, Michigan half blood at 32½ cents and three-eighths blood at 32@33 cents. Michigan quarters went at 30 cents, Ohio quarters at 31 cents and Missouri and other quarter bloods at 29½ cents. Good sales of fine unwashed delaines are reported at 31 cents, with Ohio washed delaine at 38½ cents. Oregon staple wools are sold up, but some Valley No. 1 sold at 25@26 cents. Scoured territories changed hands at 68@70 cents for fine, and baled California scoured at 58@60 cents. Texas wools are out of stock. There was a good demand for pulled wools, fine and staple. The London market is closing at fully maintained prices, grades suitable for this country being higher than at the opening. Queensland 60s to 64s sold at the sales at the equivalent of 88 cents here, this price being prohibitive. Other foreign markets are just as firm as London, 64s selling at the Sydney sale at a cost of 84 cents here, against 77 cents last year, with 60s at 82 cents, against 75 cents last year. At Adelaide prices are 10@12½ per cent. higher than last year, sales having been made at a cost of 79 cents in this country, against 72 cents last year. The Melbourne sales, which open October 7, are expected to be very firm.

Boston Shoe and Leather Market.

Trade in the shoe and leather district is quiet, as the between-seasons period is approaching early. Leather is firm, but orders are confined to sample lots or immediate wants. Shoe manufacturers still receive orders for fall goods, but business has been a disappointment to the great majority. Prospects for next season are held to be decidedly better, but it is early yet to predict. Shipments this week are over 11,000 less than the same week last year. The *Shoe and Leather Reporter's* figures are as follows: Last week, 90,571 cases; preceding week, 93,474; last year, 101,906; total for 1907, 3,667,344; total for 1906, 3,842,775; decrease, 175,431.

WISCONSIN'S PAPER INDUSTRY.

According to the Milwaukee *Sentinel*, "the great paper-manufacturing industry of Wisconsin does, or soon will, rival the world in its product. There are almost all kinds of paper made, including bond, book, both flat and glazed, used for fine illustration work; news, straw, tissue and writing, for fine and ordinary envelope paper, and such as used for the railroad mileage and made into lace for cigar boxes, carloads of printed Japanese napkins and the fruit wrappers for California. Shiploads are sent to Japan and trainloads to all parts of the west. Several trainloads of paper steam out of the Fox river valley every evening. It is a small mill which does not make a carload in one day. Some of the machines run a sheet of paper 120 inches wide, 500 feet every minute, or a mile of paper every ten minutes, which is rolled into great white rolls and shipped in that manner to the newspapers.

"Some machines, making beautiful tinted or white heavy bond, can only run sixty feet per minute, as the paper cannot be formed faster in the finest grades. The best papers are cut up into the proper sizes of flats and neatly packed in sealed packages, and others are run through the ruling machines and made ready for ledger or blank books. The envelope paper is cut in diamond shape. The best grade of paper is packed in pine cases for shipment; other grades have light frames on either side of the bundle wrapped in lower grades of wrapping paper and tied with strings; others are shipped in rolls wrapped with paper. Some are prepared for the market for counter use in small rolls with wooden plugs in the end, through which the iron rod is inserted, over which it is unrolled for covering packages in the store; much of this is also printed at the mill with the advertisement of the store.

"The glaze of the fine illustration and magazine paper is obtained by continuous running between rolls, one of them being made of paper very hard pressed and the other being iron. A succession of these rolls one above the other into a stack are called calender rolls. A stack of these rolls costs $7,000. For superior finish the paper is run through glue called animal size, but for lower grade of polish rosin is used, called vegetable finish. Paper is made of cotton rags, old papers and wood. The rags are old black stockings or any other refuse gathered over the world, or the clean white trimmings of shirt and collar factories. These make the finest grades of paper, though often mixed with German sulphite wood pulp. The old papers are made into colored or gray wrapper papers. The wood pulp enters into most papers in small quantities, but is entirely used in newspapers and much low-grade book paper. The wood used is pine, balsam, spruce, poplar and hemlock. The hemlock is used in making manila wrapper. It is prepared by grinding over great grindstones, or a chemical process known as sulphite, of which there are several processes. The wood is cut up into chips, blown into large boilers set on end called digesters, and there steamed into a liquor prepared from sulphur which separates the fiber of the wood in a pulp-like string of cotton.

"Cotton seed can also be used in paper-making. The pulp is run through beater engines, which cut it up fine with a long fiber, and then through a Jordan engine, which revolves swiftly and reduces all parts of the pulp into an even mass. Through all the processes of rendering the pulp it is conveyed in pipes and forced along with pumps. When it runs out on to the copper wire of the machine which forms the beginning of the sheet it is much like cream. As it leaves the wire screen on which the sheet is first formed it is carried on felts through rolls that squeeze out the water and then over a succession of large cylinders heated by steam, which dries it, and it rolls out at the other end of the machine or through a stack of calenders in a wide, endless sheet rolled up ready for the cutters, who size it into the proper shapes for the market. These paper machines are a complicated mechanism, costing upward of $50,000.

"Many of the mills prepare their own rags, but the wood pulp or sulphite outfit is connected with only a few mills. Many of these wood-pulp plants are separate enterprises, which dispose of their product to all the paper mills. Thousands of carloads of wood-pulp woods are cut in the northern forests each winter, and large rafts brought over the lakes from Canada each season and loaded on the cars at Green Bay for distribution to the mills.

"The paper industry is confined to two principal regions—the Fox river valley and the Wisconsin—though there are large mills on the Wolf at Shawano, on the Oconto at Oconto Falls, and some on the Menominee river at Marinette, and at Niagara. At the latter place there is a fall of seventy-two feet at the natural fall, and immense mills. The Fox river valley mills were the beginning of the industry in the west, and are the finest mills, making the highest grade of paper.

"New mills are being built constantly in the Fox river valley, and it will always be the most prominent center of the industry, yet the Wisconsin river will be a great rival with its hundred water powers now being taken up for paper mills. A dam has recently been built near Merrill seventy-five feet high, the largest in the world, for paper and pulp mills. All the mills run night and day, a ceaseless hum from Monday morning to Sunday morning, working two shifts. Men, boys and girls work in the mills. They are paid good wages, from $1.50 for common labor to $4 for machine, and some superintendents get from $3,000 to $10,000 a year salary.

"Wisconsin has as many paper and pulp mills as Massachusetts or Pennsylvania, and New York is the only state which has more mills than Wisconsin, which is rated second in America. The widest machine is at Niagara, 156 inches wide, and the largest product is at Nekoosa, where 160,000 pounds of print and manila are made daily. There are at present plans being made and mills erected which will require upward of $4,000,000 to complete. The reason of the existence of the paper industry in Wisconsin is its clear water, its abundant hydraulic power, and close proximity to the forests which produce the woods required for paper. The industry has a great future, as the mills are not dependent for success upon term of the forest; when the wood is exhausted all the waste material of the world is just as accessible to these mills as any other."

THE WORLD'S PRODUCTION OF TIN.

According to the London *Statist*, "the extreme prices for tin metal in the last sixty years have been £52 10s. in 1878 for Straits tin per ton, and £215 per ton, at which a transaction—though apparently a transaction of quite exceptional character—was recorded in May, 1906. As against this high figure for 1906, we have the fact that ten years previously—that is, late in 1896—the price of tin was as low as £56 per ton, and for the whole of 1896 only averaged about £61. The margin of difference between the highest and lowest prices of recent years has been considerably more than double what has been the margin between the highest and lowest prices of copper, and the main explanation of the liability of tin to so much greater fluctuations than in copper is, of course, the much smaller world's production of tin than of copper that has to be handled, and the greater ease with which market movements can be manipulated. For 1906 it may be estimated that the total output of copper amounted to 711,700 tons, and, so far as one can ascertain from published facts, and those only of an approximate character, the output of tin for 1906 was under 100,000 tons. The highest and lowest annual prices of Straits tin per ton quoted in the London market, from 1850 to 1906, follow:

	High	*Low*		*High*	*Low*
1850	£85	£70	1879	£96	£59
1851	88	78	1880	101	68
1852	98	77	1881	110	86
1853	125	97	1882	114	92
1854	126	105	1883	99	83
1855	130	104	1884	87	73
1856	143	126	1885	97	74
1857	150	95	1886	103	92
1858	125	100	1887	167	100
1859	142	125	1888	170	75
1860	135	129	1889	100	88
1861	130	110	1890	104	88
1862	149	110	1891	94	89
1863	128	113	1892	103	88
1864	120	87	1893	95	74
1865	97	87	1894	74	61
1866	95	75	1895	69	59
1867	91	83	1896	61¾	56
1868	109	87	1897	63½	58½
1869	140	108	1898	86¾	63
1870	135	103	1899	149½	92
1871	157	123	1900	152	108
1872	160	130	1901	132	101
1873	148	114	1902	137	100
1874	121	87	1903	140½	111½
1875	96	76	1904	136½	116⅜
1876	81	70	1905	166¼	129¾
1877	76	64	1906	215	161
1878	66	52½			

"Consequent on a growing impression that base metals — tin and copper in especial — have been carried up to an unduly high level of price, users of these metals have in recent months been only buying very sparingly, indeed, as and when requirements occurred. The normal demand in the open market for those who desire to maintain stocks by buying for forward delivery, so as to meet expected orders for manufactured goods, has been as much as possible restricted, and an outcome of the general impression that prices must recede has been the adoption of a, so to speak, hand-to-mouth policy of only buying 'spot' tin or 'spot' copper. Hence the metal for immediate (or 'spot') delivery, instead of being cheaper than the 'forward' price, as should normally be the case, has been much dearer. In tin the discrepancy between the cash price and the price for three months ahead at one time this year became very pronounced. Instead of there having been, say, a normal price of about £1 per ton higher for three months ahead than for 'spot,' the 'spot' or immediate delivery price was very near to £12 higher than the quotation for three months forward. Some of the principal movements in 1907 are set out below:

	Cash	*Forward*	*Margin*
January 1	£191¾	£192½	+ ¾
March 1	192	191½	— ½
May 1	196	193½	— 2½
July 1	192¾	181¾	—11¾
August 1	180¾	179	— 1¾
August 14	164½	164	— ½
August 16	169½	169	— ½
August 30	165¾	165¾	....
September 4	168½	168¼	— ¼
September 6	166½	166¼	— ¼

"In the tin trade the main users are the manufacturers of 'tinplates.' In bygone years England had the virtual monopoly of this manufacture, but a dozen or so years ago the United States imposed

a prohibitive duty, and American manufacturers put up their own factories for coating thin iron sheets with tin. 'Tinplates,' we may remind our readers, are enormously used for packing goods, especially provisions. Tin also is largely used in conjunction with other metals in the production of bronze, brass, Britannia metal, pewter, printers' type, thin sheet lead, white metal for silver-plating, etc. Solder is largely composed of tin.

"The rising tendency of prices for some years past has been due to growth of consumption, and to such growth occasionally to a marked extent having been greater than the supplies coming forward. From the published statistics of brokers the United Kingdom, European and American supplies and deliveries show the narrow margin which the trade has had to work with, the figures being in tons of 2,240 pounds:

	Supplies	*Deliveries*	*Excess of Supply*	*Excess of Delivery*	*Stock and visible Dec. 31*
1906	74,879	75,262	..	383	13,118
1905	74,543	75,728	..	1,185	13,501
1904	76,843	77,392	..	549	14,686
1903	75,866	76,312	..	446	15,235
1902	73,889	75,805	..	1,916	15,900
1901	72,635	69,508	3,127	..	19,597
1900	66,911	68,943	..	2,032	14,470
1899	62,328	64,904	..	2,576	16,502
1898	61,444	71,465	..	10,021	19,078
1897	59,900	62,900	..	3,090	29,099
1896	63,777	61,387	2,390	..	32,189

"The main hope of a more reasonable and steadier level of price lies in the expansion of production by new fields, for, except in a limited direction, little substitution of other metals can be effected. Increased use of glass for inclosing perishable provisions, especially those containing liquid, is being resorted to, and in many directions is preferable to the use of tinned plates. Apparently there is not much prospect of appreciable expansion in the output of the main producing countries, such as the Straits and Dutch East Indies. But Australia is gaining ground, and South America could, if energy be shown, give more supply. Recent discoveries in South Africa have not proved so valuable as was at one time hoped, but some output may develop in Swaziland.

"Now that the price has receded to below £170 per ton, matters from the consumers' point of view have improved, but the prudent user of the metal, we consider, will be well advised to continue to purchase only as actual requirements arise in connection with orders for manufactured goods.

"In the endeavor to secure statistics as to the world's total output of tin, one is met by the circumstance that in trade statistics the comparative figures that are compiled for trade information as to supply and consumption relate only to the shipments to Europe and America of tin from the main producing centers of the Straits, Dutch East Indies (Banca and Billiton) and Australia. Notwithstanding the fact that Bolivia, as a source of supply, has become one of considerable importance, and that there is some fair quantity of tin produced in this country (Cornwall), neither Bolivian nor Cornish production, nor where such production is used, are dealt with by the trade circulars. Exclusive of Bolivia and Cornwall, the other sources of supply would in recent years appear to have grown from about 35,000 tons in 1878 to about 75,000 tons for 1906.

"But this only applies to the published statistics of the imports into the United Kingdom, Europe and America of Straits, Dutch Indian and Australian tin. Further, small amounts of Straits tin, not included above, are sent direct to India and China. The Bolivian production is chiefly sent abroad in the form of ore averaging approximately 60 per cent. of metal contents—figures we give are the quantities of metal tin. And, lastly, there is Cornwall, the production of which in the early nineties fell off considerably on account of the low level of price to which tin receded. Against an estimate of about 8,300 tons of Cornish production in 1894, the production of 1899 was only about 4,000 tons, and, notwithstanding the improvement in price since, there has been but a very small increase. Last year a revival of Cornish mining enterprise was a feature of interest, and a number of mines that had been virtually abandoned in the bad times have recently been taken in hand and the capital provided for putting them into operation again. The resuscitation of Cornish mining enterprise offers distinct probabilities for some of the Cornish mines with good ore, owing to new conditions of modernized appliances, of expansion in the local output of tin in the future. But it is as well to take note that a mine that has been allowed to become flooded, and where old plant has to be replaced with new, takes some time before it can be brought to the position of renewed production.

"With these explanatory remarks we may attempt to give an approximate estimate of the total output of the world so far as statistics are available. There are no statistics that can be turned to in respect of some small sources of supply, such, for instance, as interior production in China; nevertheless, the figures below are near the mark, and are interesting for comparison over a period of years. Production of tin by countries in tons of 2,240 pounds:

	Straits	*Banca and Billiton*	*Bolivia*	*Australia*	*Cornwall*	*Total*
1906	58,443	11,254	14,700	6,482	4,500	95,379
1905	58,324	12,675	12,500	5,028	4,468	92,995
1904	60,680	14,578	11,700	4,846	4,132	95,936
1903	55,335	18,720	9,200	4,934	4,282	92,471
1902	53,697	18,875	9,000	3,199	4,392	89,163
1901	52,580	19,365	8,000	3,345	4,600	87,890
1900	46,948	18,513	6,000	3,235	4,268	78,964
1899	45,507	14,935	4,700	3,370	4,013	72,525
1898	46,596	15,009	4,200	2,390	4,648	72,842
1897	44,884	14,730	5,400	3,500	4,452	72,966
1896	50,000	12,367	4,000	4,360	4,837	75,564

"It will be observed that the aggregate supply has increased in ten years by about 20,000 tons, or over 26 per cent., but the rate of increase in consumption has fully kept pace. The trade statistics, indeed, show that the large quantity that ten years ago was in stock or on way has been heavily trenched upon, so that at December 31, 1906, the stock and visible supply was but 13,118 tons, against 32,189 tons at end of 1906."

ANNUAL ELECTIONS NEW YORK CLEARING HOUSE ASSOCIATION.

At the annual meeting of the New York Clearing House Association, held on Tuesday, Alexander Gilbert, president of the Market & Fulton Bank, was reëlected president of the association, and Albert H. Wiggin, vice-president of the Chase National, was reëlected secretary. William Sherer was reappointed manager and William J. Gilpin assistant manager. The new committees follow:

Clearing House committee—James T. Woodward, president Hanover National Bank; William A. Nash, president Corn Exchange Bank; Dumont Clarke, president American Exchange National Bank; A. B. Hepburn, president Chase National Bank, and Edward Townsend, president Importers' & Traders' National Bank.

Committee on admissions—Henry P. Davison, vice-president First National Bank, New York; Henry H. Powell, cashier Importers' & Traders' National Bank; James G. Cannon, vice-president Fourth National Bank; Gilbert G. Thorne, vice-president National Park Bank; Ruel W. Poor, president Garfield National Bank.

Arbitration committee—Phineas C. Lounsbury, president Merchants' Exchange National Bank; Lewis E. Pierson, president Irving National Exchange Bank; Edward Burns, cashier American Exchange National Bank; Alfred M. Bull, vice-president Phenix National Bank; William C. Duncan, president Greenwich Bank.

Conference committee—Robert M. Gallaway, president Merchants' National Bank; Herbert L. Griggs, president Bank of New York N. B. A.; Corcellus H. Hackett, president Bank of the Metropolis; Frederick B. Schenck, president Liberty National Bank; Samuel G. Bayne, president Seaboard National Bank.

Nominating committee—Hart B. Brundrett, president Pacific Bank; Scott Foster, president People's Bank; Henry A. Smith, vice-president National Bank of Commerce; Walter E. Frew, vice-president Corn Exchange Bank; Gilson S. Whitson, vice-president National City Bank.

A number of important amendments to the constitution were adopted by the meeting, including two intended to restrain the movement of country banks of having their customers draw on the country banks' New York correspondents and thus practically carry a New York account. These amendments follow:

Banks acting as redeeming agents for other institutions not members of this association shall keep and maintain in their own vaults a cash reserve of net deposits equal to the highest percentage of reserve required by law of any member of this association.

No member of this association shall send or pay through the exchanges checks or other items drawn on banks, bankers or trust companies, not members of this association, by customers thereof in Greater New York, and made payable at a Clearing House bank, unless the same shall first be accepted and made payable at a Clearing House bank by the bank, banker or trust company upon which they are drawn. This provision shall also apply to non-members making exchanges through members of this association.

The other amendments provide for changes in the weekly bank statement as follows:

The several items of the weekly statement are to comprise the following:

Loans and discounts—Loans, discounts and stocks and bonds and mortgages owned by the bank.

Specie—Gold and silver coin. United States and Clearing House gold certificates, and United States silver certificates.

Legal tender notes—United States legal tender notes of all issues.

Circulation—Amount outstanding.

Deposits—Gross deposits and unpaid dividends, less the following deductions, namely, exchanges for the Clearing House, amounts due from other banks for collection, notes of other banks and checks on non-clearing institutions in this city.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 12, 1907.

When the Lusitania made her noteworthy run to New York four weeks ago, though making the quickest trip from coast to coast across the Atlantic, she left two records untouched, namely, that for the best day's run, held by the Deutschland, and that for the best average speed, which was retained by the Kaiser Wilhelm II. These records have now been surpassed, as the result of the Lusitania's trip of this week. That remarkable vessel covered the distance from Daunt's Rock, off Queenstown, Ireland, to Sandy Hook Lightship in four days, nineteen hours and fifty-two minutes. This trip cut five hours from the best previous record for the passage, that made by herself less than a month ago, thus establishing a new record within the five-day limit. The average speed made by the Lusitania on her voyage completed yesterday was twenty-four knots, which is nine minutes above the previous record, while her best day's run, 617 knots, was sixteen knots in excess of the best heretofore made by any other boat. Indeed, the Lusitania broke the record for a day's run twice on her latest trip, reaching a total of 608 knots, or seven knots above the record, on the second day. It is interesting to note that the officers of the ship anticipate even better records in the future.

More and more serious become the revelations brought out by the examination of the New York City traction merger now in progress before the Public Service Commission. The overcapitalization involved in the scheme carried out by the Ryan-Belmont interests in the early part of 1906 has been, of course, fully recognized for a long time. The present developments, however, serve to demonstrate what had been suspected from the outset, viz, that the people in control of the Metropolitan Street Railway and Metropolitan Securities companies forced the financiers identified with the Interborough Rapid Transit, or subway, and its leased property, the Manhattan Elevated, to enter into a combination with them by methods of a very peculiar kind. Not the least interesting of the revelations of the past week pertained to displaying how public sentiment was organized and made effective in the legislature at Albany on behalf of one of the contestants in the struggle for traction supremacy in New York prior to the famous deal. The most striking illustration of the methods which have been used by the financiers at the head of the Metropolitan system was, however, disclosed when the astonishing facts came out about the purchase by the Metropolitan Securities Company of the Wall & Cortlandt Street Ferries Railway Company, a concern consisting simply of a franchise and nothing else. For this valuable property $965,000 in cash was paid, and still more remarkable, the seller actually received only $250,000, the remainder of this sum being handled in the form of checks for [illegible]0,000 or a little more to other parties identified with the management, who now claim that they received these amounts in payment for a personal indebtedness on the part of their fellow-director, the late W. C. Whitney, who had negotiated the arrangement. Explanations to this effect have been forthcoming from some of the parties involved, but the financial public awaits further revelations in the matter, not unmingled with expectations that the law may be invoked to bring about restitution or punishment.

Eastern banks continue to feel the effect of interior demands for funds to move the crops. By itself this drain could, however, probably be supported without inconvenience other than the maintenance of stiff rates at New York and other cities. The situation, however, has developed further complications this week, involving a sharp rise in foreign exchange rates, with the possibility that gold exports to Paris may set in. The lateness of the cotton crop movement results in a scanty supply of commercial bills, but the most effective factor in creating a strong exchange market is the fact that European bankers are apparently calling in credits which they had extended to American interests last summer. In addition to this, it is understood that large borrowings on revenue bonds made by New York City in the Paris market are maturing and being paid off, while to render the situation still more unfavorable, some large foreign holdings of our securities have been liquidated. The announcement that the Bank of France would facilitate the shipment of gold from New York to Paris by allowing interest on amounts while in transit was followed by a rescission of this step, and the danger of a gold outflow is considerably lessened thereby. It is held that the leaders of the European financial markets recognize the undesirability of action that would tend to increase the strain at New York, but in spite of this the loan market on this side of the ocean is again likely to feel the effects of the large loans which had been contracted abroad and the inability or unwillingness of London and Paris to extend them.

Arbitration as a means of settling international disputes scored a success at The Hague on Monday in the adoption by the committee having the matter in charge of the project for obligatory arbitration. The vote in the committee was thirty-one to nine. The opponents of the measure were Germany, Austria-Hungary, Switzerland, Belgium, Roumania, Greece, Turkey, Bulgaria and Montenegro, while Italy, Japan and Luxemburg refrained from voting. It will not escape notice that all the countries of the western world stood by the United States in the voting. One of the incidents of the proceedings leading up to the vote was a criticism of the United States Senate, which was answered with vigor and completeness by the American delegates. It was decided by the committee on maritime warfare that belligerent warships should be permitted to remain more than twenty-four hours in a neutral port in case that time should be insufficient to enable them to take on coal enough to reach a port of their nationality. The proposition dealing with the subject of contractual debts was approved by the committee considering the matter on Tuesday, and on the same day the conference in plenary session adopted the convention defining the rights of neutrals in naval wars, and also the convention regulating the laying of submarine mines. It has been decided that in the final act President Roosevelt's name will lead all the rest among those deserving of recognition as being the summoner of the conference.

From Japan, where he won such plaudits, Secretary Taft has journeyed to China, where he seems to have repeated his Japanese experience. The reception given to him in Shanghai is said to have been the most remarkable ever accorded to a foreign statesman. His happy art of saying things at once wise and acceptable was again displayed at a banquet declared to be the largest and most representative in the history of the city. Speaking as an American citizen and not as a representative of the government, the Secretary said that American trade was now second in China, and that while the merchants of the United States do not complain of loss of trade resulting from the employment of greater enterprise, ingenuity or attention to the demands of the Chinese market or greater business shown by their competitors, they would view with deep concern any and all political obstacles to the maintenance and expansion of their trade with China. American manufacturers, he said, do not to-day take the trouble to pack their goods properly or send them out in the sizes desired by the Chinese, but this lack of business sense is disappearing slowly, as our merchants are becoming aroused to the importance of the trade. Mr. Taft said that the Chinese would be wise to devote their energies to the development of the country's resources, the elevation of the people, the enlargement of trade, and administrative reform, declaring that every improvement aimed at has the deep sympathy of America. It is noteworthy that among the promoters of the reception were prominent merchants representing the guilds which were formerly in the boycott movement against American products.

A large attendance with interesting discussions marked the three days' sessions of the international conference of cotton growers, spinners and manufacturers at Atlanta, Ga. President McColl, of Providence, R. I., declared in his opening address that it was desirable for the growers of cotton to realize by personal contact with the spinners that if they are to maintain their supremacy there must be a forward movement in the direction of removing certain sources of friction that now exist in the growing, handling and marketing the product. Mr. Macara, speaking for the foreign spinners, laid stress upon the effect of speculation in cotton upon prices and the need of doing something to minimize its influence in that direction. A resolution against speculation in futures was presented early in the session, introducing a topic which formed the subject of much discussion in the course of the proceedings. The resolution was at length referred to the different bodies represented in the conference for individual action. It seemed apparent that while the growers favored the resolution, the spinners regarded the exchanges as holding a useful place in the legitimate transaction of business under present conditions. It may be noted that the conference declared in favor of a standard contract for 50,000 pounds instead of 100 bales net weight. One outcome of the convention was the appointment of a committee to perfect a permanent organization in which all the constituent elements of the conference will be represented. Another result may be the elaboration of a plan under which the European consumers will be enabled to deal directly with the growers, thus eliminating middlemen to as great an extent as possible.

THE PRESIDENT ON THE WATERWAYS.

President Roosevelt's last formal speech before his departure for the hunting ground in Louisiana was upon a theme which seems to have attracted him, and which he treated in a large and adequate way. We refer to the address delivered before the Deep Waterways Convention at Memphis, in which he announced his adhesion to the policy of national aid for the improvement of the great waterways of the country, and particularly of the Mississippi. Mr. Roosevelt set in a forcible light the importance of the Mississippi valley. It is, he said, a magnificent empire in size and fertility, and is better adapted to the development of inland navigation than any other valley in either hemisphere, for there are in it 12,000 miles of waterways, more or less fully navigable, and conditions are so favorable that it will be easy, by canalization, to increase the extent of navigable waterways to almost any required degree. In wealth of natural resources, Mr. Roosevelt continued, no kingdom of Europe can compare with the Mississippi valley and the region around the great lakes taken together. In population this huge fertile plain already surpasses all save one or two of the largest European kingdoms. In short, the valley of the Mississippi is politically and commercially more important than any other valley on the face of the globe, and there, more than anywhere else, will be determined the future of the United States, and, indeed, of the whole western world.

Again, the wonderful variety of resources in different portions of the valley make the demand for transportation altogether exceptional. Beneath as well as on the surface of the soil the riches are great, including coal, lumber, corn, wheat, cotton, cattle, and there are evident strong tendencies to increase the carrying of freight from the northern part of the valley to the gulf. No man can foresee the possibility of development in the valley, and it being literally the heart of the United States, all that concerns its welfare must concern likewise the whole country. The Mississippi river and its tributaries should therefore be utilized to their utmost possibility. Those natural highways, the waterways, can never, the President reminded his hearers, be taken away or monopolized by any corporation. Furthermore, wherever a navigable river runs beside the railroads the problem of regulating the rates on the railroads becomes far easier, because river regulation is rate regulation. When the water rate sinks the land rate cannot be kept at an excessive height. From this point of view, therefore, it is of national importance to develop these streams as highways to the fullest extent which is genuinely profitable, and with the growing acuteness of transportation problems the time has come when those rivers really fit to serve as arteries of trade should be provided with channels deep enough and wide enough to make the investment of the necessary money profitable to the public.

In the judgment of the President this work should be undertaken by the national government, though where the immediately abutting land is markedly benefited, and this benefit can be definitely localized, he trusts that there will be careful investigation to see whether some way can be devised by which the immediate beneficiaries may pay a portion of the expenses, as is now the custom as regards certain classes of improvements in municipalities. It goes without saying that the expense to the nation of entering upon such a scheme of river improvement as that which the President believes it should undertake will necessarily be great. It is therefore necessary, if the project is to be made successful, that it should be entered upon only under conditions which will guarantee the nation against waste of its money, and which will insure it against entering upon any project until after the most elaborate expert examination and reliable calculation of the proportion between cost and benefit. In any such project, also, there should be a definite policy, and a resolute purpose to keep in mind that the only improvements made should be those really national in their character. It is the great rivers and the great harbors the improvement of which is of primary national interest, and the main streams should be improved to the highest practicable degree of efficiency before improvements are attempted on the branches. The policy should not only be definite, but also continuous, and work should be undertaken only when completion is in sight within an ascertained and reasonable time, so that assured results may be gained and that the communities affected may depend upon the improvements.

Other topics crowded upon the active mind of the President as he dealt with his theme. He spoke of the importance, reflected in his instructions to the Inland Waterways Commission created in March last, of preparing no plan for the use of any stream for a single purpose without carefully considering and, so far as practicable, actually providing for the use of that stream for every purpose, and of taking account in all such plans of the orderly development and conservation, not alone of the waters, but also of the soil, the forests, the mines and all the other natural resources of the country. He touched upon the importance of the improvement of the Mississippi river in relation to the construction of the Panama canal, and he declared that such matters as these should not be considered as party questions, a declaration that struck a responsive chord in his hearers.

The position taken in the President's address in regard to the improvement of the Mississippi is, we need scarcely say, not novel doctrine to the readers of this journal. We recall, as not without interest at this time, a statement of our attitude on the matter culled from our files of a quarter of a century ago, when, in an article dealing with the merits of the river and harbor appropriations of 1882, we said: "It has seemed to us that, regarding the merits of one class of appropriations for the improvement of navigation, the minds of the people of the United States should be made up. We have one great river traversing our territory very nearly from north to south. This river, our statesmen of the past, mindful of the future, cherished and jealously guarded. Its possession is the key to the dominion of the continent. Thoughtful men have not hesitated to declare that in a not very distant future the fertile valley drained by this vast stream is destined to be the center of human power. It should be a special concern of the people that along this highway of empire, and along the tributaries that go to swell its tides, the course of commerce should be unimpeded and safe. Appropriations for the improvement of the navigation of the Mississippi are wise expenditures, which the future development of trade along the river will richly repay."

BULLISH WHEAT-SUPPLY FIGURES.

Slow marketing of the new wheat crop and liberal exports from this country and Canada were responsible for movements out of the ordinary in this country's and Canada's visible supply during September. Thus instead of the large increases in visible stocks normally shown during September an actual decrease was recorded, and as a result the total visible supply at the close of that month was smaller than at the same date in the preceding month for the first time in several years. Although European supplies gained slightly in September, the increase was much smaller than a year ago, and the world's visible supply on October 1 is considerably smaller than last year, whereas a month before the reverse was the case. In other words, late or smaller crop movement has brought about a reversal of wheat-supply figures the world over, which the advance of wheat prices to the highest level reached since August, 1905.

The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on October 1, 1907, compare with the same period of the four preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
October 1, 1907	59,901,000	2,944,000	62,845,000
October 1, 1906	61,154,000	3,431,000	64,585,000
October 1, 1905	35,443,000	3,156,000	38,599,000
October 1, 1904	29,428,000	4,106,000	33,534,000

Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,000
August 1	51,549,000	12,114,000	63,663,000
September 1	57,674,000	8,756,000	66,430,000
October 1	56,995,000	5,850,000	62,845,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000
August 1	39,518,000	3,591,000	43,109,000
September 1	42,989,000	2,565,000	45,554,000
October 1	47,518,000	17,074,000	64,592,000

The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same dates, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	20,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	62,3	62,7	72,1	126,0	105,8	93,0
Sept. 1	66,4	45,6	22,8	63,8	70,7	73,0	130,2	115,9	95,8
Oct. 1	62,8	64,6	38,6	71,2	83,2	80,2	134,0	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

United States and Canadian supplies of wheat, it will be seen, decreased 3,600,000 bushels in September, as against a gain of 19,000,000 bushels a year ago, while European stocks increased only 7,400,000 bushels, against 12,500,000 bushels in September, 1906, the net result being a gain of only 3,800,000 bushels in the world's visible supply in September, as against 31,900,000 bushels in September, 1906, and 23,000,000 bushels in September, 1905. Perhaps the most remarkable example of the reversal of usual conditions is shown in the reduction of nearly 3,000,000 bushels in Canadian stocks, as against a gain of 14,500,000 bushels in September last year. All American stocks of wheat, it will be seen, are nearly 2,000,000 bushels smaller than a year ago, while European stocks are 12,000,000 bushels less, the world's visible supply being 13,800,000 bushels less than on October 1, 1906, while 15,000,000 bushels larger than on October 1, 1905.

A SLIGHT CHECK TO THE DOWNWARD TREND OF PRICES.

Varying degrees of strength in the demand for different classes of products, coupled with effects of seasonal changes and the growing realization of the relative shortness of a number of crops, made for a rather irregular movement of prices last month. Thus food products generally showed aggressive strength, while a larger number of manufactured articles displayed considerable steadiness, and some textiles, nearly all metals, and many miscellaneous articles evinced rather pronounced weakness. The net result was a slight advance in the general index number on October 1 as compared with September 1, but the uneven character of many of the movements is illustrated by the fact that while seven groups of commodities advanced, six others declined. Taken as a whole, the September movement may be said to have marked a sort of hesitancy in the general downward swing, which has been in evidence largely since the high-water mark was reached in the prices of staple products on March 1, 1907.

BRADSTREET'S approximate index number on October 1, 1907, was $8.8506, which was a gain of two-tenths of 1 per cent. over the September 1 index number, but a decline of 3 per cent. from March 1, 1907, the high mark in the present movement. Compared with the index number on October 1 a year ago, the increase is 3.4 per cent., while the advance over the high level set on February 1, 1900, was 7.5 per cent. There is also shown a gain in the present index number over the low level of July 1, 1896, of 55.2 per cent.

Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Jan. 1, 1906	$8.3289
July 1, 1896	5.7019	Feb. 1, 1906	8.2415
Jan. 1, 1897	6.1164	Mar. 1, 1906	8.2321
July 1, 1897	5.8537	April 1, 1906	8.2087
Feb. 1, 1900	8.2307	May 1, 1906	8 3054
June 1, 1901	7.4181	June 1, 1906	8.3203
Dec. 1, 1902	8.1413	July 1, 1906	8.2835
Aug. 1, 1903	7.7473	Aug. 1, 1906	8.3376
Feb. 1, 1904	8.0973	Sept. 1, 1906	8.4528
July 1, 1904	7.6318	Oct. 1, 1906	8.5580
Jan. 1, 1905	8.0827	Nov 1, 1906	8.7509
Feb. 1, 1905	8.0805	Dec. 1, 1906	8.9023
Mar. 1, 1905	8.0976	Jan. 1, 1907	8.9172
April 1, 1905	7.9996	Feb. 1, 1907	8.9053
May 1, 1905	7.9700	Mar. 1, 1907	9.1293
June 1, 1905	7.9073	April 1, 1907	8.9640
July 1, 1905	7.9160	May 1, 1907	8 9356
Aug. 1, 1905	8.1111	June 1, 1907	8.9901
Sept. 1, 1905	8.2795	July 1, 1907	9.0409
Oct. 1, 1905	8.2298	Aug. 1, 1907	8.9304
Nov. 1, 1905	8.2097	Sept. 1, 1907	8.8297
Dec. 1, 1905	8.3014	Oct. 1, 1907	8.8506

The net result of the various movements during the month of September is illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Oct.* 1, 1906	*Mar.* 1, 1907	*Sept.* 1, 1907	*Oct.* 1, 1907
Breadstuffs	$0.0524	$0.0758	$0.0817	$0.0992	$0.1077
Live stock	.1855	.3180	.3315	.3255	.3315
Provisions	1.3619	1.9573	2.1049	1.9515	2.0325
Fruits	.1210	.2507	.2003	.1957	.1707
Hides and leather	.8250	1.1900	1.1975	1.1750	1.1950
Textiles	1.5799	2.4942	2.7369	2.8029	2.7767
Metals	.3757	.7728	.8466	.7122	.6765
Coal and coke	.0048	.0073	.0080	.0070	.0072
Oils	.2082	.3035	.3428	.3663	.3611
Naval stores	.0402	.1022	.1170	.0912	.0895
Building materials	.0716	.0902	.0906	.0851	.0881
Chem. and drugs	.6607	.7083	.7083	.7021	.7029
Miscellaneous	.2150	.2877	.3632	.3160	.3112
Total	5.7019	8.5580	9.1203	8.8297	8.8506

Exceptional strength, it will be seen, was shown in prices of provisions and groceries. Fourteen articles out of twenty-four in this group advanced, quite marked gains being shown in dairy products—which felt the influence of reduced make, due to drought of the late summer—eggs and meats. The entire list of cereals also gained, appreciation of foreign needs of our breadstuffs being a moving feature here. It is also to be noted that bituminous coal and coke were strong on good demand. In the list of products declining, raw cotton and hemp were prominent, and foundry iron, steel, lead and copper were also weak. In the list of miscellaneous products declining, crude rubber, hay and tobacco were prominent. Special steadiness, on the other hand, was displayed by leather, raw wool, cotton fabrics (except some of the rougher and cheaper kinds), finished iron and steel, mineral oils, some kinds of lumber, and chemicals.

The following table shows the net result of the movement of prices from September 1 to October 1 this year:

OCTOBER 1, 1907, COMPARED WITH SEPTEMBER 1, 1907.

INCREASES.

Wheat	Bacon	Pig iron, Bessemer
Corn	Lard	Silver
Oats	Butter	Tin
Barley	Cheese	Coal, bituminous
Rye	Mackerel	Coke, Connellsville
Flour	Coffee	Linseed oil
Sheep, live	Salt	Nails
Hogs, live	Beans	Glass
Beef, carcasses	Peas	Alcohol
Mutton	Currants	Paper, news
Milk	Leather, oak	Ground bone
Eggs	Flax	Cotton seed
Beef, barrel		

DECREASES.

Beeves, live	Pig iron, eastern foundry	Cotton-seed oil
Hogs, carcasses		Olive oil
Pork	Pig iron, southern foundry	Turpentine
Lemons		Brick
Raisins	Steel billets	Opium
Cotton	Copper	Rubber
Hemp	Lead	Tobacco, leaf
Cotton sheetings, southern	Quicksilver	Hay

UNCHANGED.

Horses	Jute	Tar
Bread	Silk	Lime
Hams	Print cloths	Pine, yellow
Codfish	Cotton sheetings, eastern	Timber, spruce
Sugar		Timber, hemlock
Tea	Ginghams	Alum
Molasses	Iron ore	Soda, bicarbonate
Rice	Steel rails	Borax
Potatoes	Tinplates	Carbolic acid
Apples	Steel beams	Caustic soda
Peanuts	Coal, anthracite	Nitric acid
Hides	Coke, southern	Sulphuric acid
Leather, hemlock	Petroleum, crude	Phosphate rock
Leather, union	Petroleum, refined	Quinine
Wool, Ohio	Castor oil	Hops
Wool, combing	Rosin	

In all, it will be seen, thirty-seven products advanced, while twenty-two declined and forty-six remained unchanged. Compared with a year ago the following changes are to be observed in the detailed list of prices of staples:

OCTOBER 1, 1907, COMPARED WITH OCTOBER 1, 1906.

INCREASES.

Wheat	Rice	Pig iron, southern
Corn	Peas	Pig iron, Bessemer
Oats	Potatoes	Steel billets
Barley	Apples	Tinplates
Rye	Cranberries	Petroleum, crude
Flour	Peanuts	Petroleum, refined
Beeves	Currants	Linseed oil
Sheep, live	Union leather	Cotton-seed oil
Horses	Oak leather	Castor oil
Mutton, carcasses	Cotton	Olive oil
Milk	Wool, O. and Pa.	Tar
Beef	Wool, Australian	Nails
Lard	Silk	Alcohol
Butter	Print cloths	Opium
Cheese	Standard sheetings	Quinine
Mackerel	Ginghams	Tobacco
Sugar	Cotton sheetings, southern	Paper
Tea		Hay
Molasses	Iron ore	Cotton seed
Salt		

DECREASES.

Hogs, live	Hemlock leather	Rosin
Beef, carcasses	Hemp	Turpentine
Hogs, carcasses	Jute	Brick
Eggs	Flax	Lime
Pork	Pig iron, eastern	Glass
Bacon	Silver	Yellow pine
Coffee	Copper	Spruce timber
Beans	Lead	Borax
Lemons	Tin	Rubber
Raisins	Quicksilver	Ground bone
Hides	Bituminous coal	

UNCHANGED.

Bread	Connellsville coke	Caustic soda
Hams	Southern coke	Nitric acid
Codfish	Hemlock timber	Sulphuric acid
Steel rails	Alum	Phosphate rock
Steel beams	Bicarbonate soda	Hops
Anthracite coal	Carbolic acid	

It will be seen from the above that fifty-seven articles are higher, while thirty-two are lower than a year ago and seventeen remain unchanged.

SHORTER YIELDS OF MOST CROPS.

Final returns of crop condition or of yield per acre still further reduce the estimates of outturn of leading crops, and make the prospect, so far as quantity is concerned, one of the poorest in some years. Thus the estimates of yield indicate the smallest corn and wheat crops since 1904, the smallest spring-wheat crop since 1900, the lightest oats crop since 1901, and the smallest barley crop since 1905.

The following table shows the yields per acre, in bushels, of leading crops in this and preceding years:

	1907	1906	1905	10-*yr av'ge*
Winter wheat	14.6	16.7	..	..
Spring wheat	13.1	13.7	14.7	14.0
Oats	23.5	31.2	34.0	30.1
Barley	23.9	28.3	26.8	25.5
Rye	16.4	16.7	16.5	15.7
Hay*	1.44	1.35	1.54	1.43

* Tons.

The conditions of crops at or near harvest follow:

	Oct. 1, 1907	*Sept.* 1, 1907	*Oct.* 1, 1906	*Oct.* 1, 1905	10-*yr av'ge*
Corn	78.0	80.2	90.1	89.2	79.6
Buckwheat	80.1	77.4	84.9	91.6	82.9
Potatoes	77.0	80.2	82.2	74.3	74.7
Tobacco	84.8	82.5	84.6	85.8	*81.7
Flax seed	78.0	..	84.7	*91.5	..
Rice	88.7	..	87.2	89.3	..

The percentages of quality of the various crops follow:

	1907	1906	1905	1904
Spring wheat	88.8	88.5	89.0	75.7
Oats	77.0	88.2	92.4	91.4
Barley	88.1	89.1	86.2	88.7
Rye	91.6	94.1	92.6	91.6
Hay	90.4	89.9	89.8	92.7

The following table shows for each of the five principal spring-wheat states the preliminary estimate of yield per acre and total production this year, with final figures for 1906 for comparison (in bushels):

	Per acre 1907	*Total* 1907	*Per acre* 1906	*Total* 1906
North Dakota	10.0	55,130,000	13.0	77,896,000
Minnesota	13.0	59,891,000	10.9	55,801,591
South Dakota	11.2	32,267,000	13.4	41,055,400
Washington	24.5	21,903,000	19.6	17,186,966
Iowa	12.8	6,451,000	14.9	7,748,000
United States	13.1	216,067,000	13.7	242,372,966

Reduced to a quantitative form, the probable results (in bushels) of the condition figures of the leading crops point to about the following:

	Possible yields 1907	*Actual yields* 1906	*Record yields and years*	
Winter wheat	409,500,000	492,888,000	492,888,000	1906
Spring wheat	216,067,000	242,372,966	293,185,322	1899
Total wheat	625,567,000	735,260,966	748,460,218	1901
Corn	2,491,715,000	2,927,416,091	2,927,416,091	1906
Oats	741,521,000	964,904,522	987,842,704	1902
Barley	147,192,000	178,916,484	178,916,484	1906
Rye	31,566,000	33,374,833	33,630,592	1902
Buckwheat	12,993,000	14,641,937	22,791,839	1866
Total above cereals	4,050,554,000	4,854,514,833	....	..
Potatoes	280,400,000	308,038,382	332,830,300	1904
Hay *	60,766,000	57,145,959	65,829,612	1899

* Tons.

Compared with 1906, winter wheat shows a probable reduction of 16.8 per cent., spring wheat 11.1 per cent., all wheat 14.9 per cent., corn 14 8 per cent., oats 23.1 per cent., barley 17.4 per cent., rye 5.4 per cent., and buckwheat 10.9 per cent. The aggregate yield of all cereals is 16.5 per cent. less than a year ago.

The following table gives the condition or production of other crops on October 1, with comparisons for a year ago. Condition reports upon crops that were harvested before October 1 refer to the condition at time of harvest:

	Oct. 1, 1907	*Oct.* 1, 1906
Alfalfa, condition	90	92
Apples, condition	34	60
Beans, production	79	86
Broom corn, production	85	89
Cabbage, production	84	82
Clover seed, production	65	69
Cranberries, condition	78	80
Grapes, condition	82	86
Hemp, production	87	91
Hops, pounds per acre	1,114	1,101
Hops, quality	90	95
Kaffir corn, forage production	84	93
Millet hay, production	83	89
Millet seed, production	82	87
Onions, production	87	85
Peanuts, condition	85	85
Sorghum, condition	80	89
Sugar beets, condition	90.5	96
Sugar cane, condition	92	82
Sweet potatoes, condition	83	86
Tomatoes, production	86	81
Watermelons, production	75	80

THE ATCHISON REPORT.

Annual reports of railroad companies throughout the country covering the operations for the year ending June 30, 1907, continue to appear with great rapidity. This week has brought the publication of a number of documents of this kind, including the statements of some of the most important systems in the country. Of these, one of the most interesting is that of the Atchison, Topeka & Santa Fe. In this case the comparative results as to revenue and expenditures in 1906-07 and the preceding year are as follows:

Year ending June 30	1907	1906	*Increase*
Gross	$93,683,407	$80,801,010	$12,882,397
Other income	753,168	982,139	*228,971
Total income	94,436,575	81,783,149	12,653,426
Expenses, taxes, rent, etc.	61,779,916	52,501,714	9,278,202
Net	32,656,659	29,281,435	3,375,224
Charges	11,487,935	11,013,264	474,671
Surplus	21,168,724	18,268,171	2,900,553

* Decrease.

The salient feature in nearly all of the railroad reports for the same periods continues to be the largely disproportionate increase in the operating cost of the road as against their gain in its gross earnings. This is not absent from the Atchison's showing. As will be seen above, the increase in the gross earnings is a very large one, amounting to about 15 per cent. In this connection it is necessary to mention that, owing to an increase in the mileage through the taking over by the parent company of a number of auxiliary lines, which naturally swells the aggregate for the year covered by the report, it was deemed proper to include the operations of these absorbed lines in the figures for 1905-06, so that the different items of revenue and expenditure for that year, given in the above table, do not agree with those which were published in the annual report preceding the one now under consideration. In spite of this, the gross makes the above increase, but, on the other hand, the operating expenses increased 19 per cent., so that the proportion of the gain in net was 11 per cent. It must be admitted, however, that, as against the unsatisfactory net gain by a number of important companies, the results of the Atchison are satisfactory, and fully justify the statement contained in the body of the report that few companies in the United States have been more prosperous than this one during the year. In fact, the amount applicable to dividends, after allowing the full 5 per cent. the preferred stock is entitled to, and which it received in 1906-07, was equivalent to a little over 15 per cent. upon the $102,956,500 of common stock. Following its usual custom, the company wrote off or appropriated for reserve funds some $9,700,000, and taking the latter amount into consideration, the net surplus was equivalent to about 5½ per cent. upon the common.

The management of the Atchison has not failed, in commenting upon the above results, to speak of the extraordinary prosperity with which the southwestern states were favored. It is mentioned that at times the volume of traffic was so large that its facilities were overtaxed, and a congestion of traffic ensued so great as to cause a material increase in the operating expenses. The rapid growth of the section it serves, however, renders it necessary to increase the company's facilities, so that an expenditure of a large amount of additional capital is imperative in the case of the Atchison, as is true of other companies similarly situated. On the other hand, the report sets forth that the power of the railways to obtain this additional capital has been impaired by loss of confidence on the part of investors, caused in a great measure by the unfriendly attitude of the public, as well as by legislatures and railroad commissions, more especially by the arbitrary action of bodies of the latter kind, involving reductions in rates and burdensome restrictions.

UNION PACIFIC'S INCOME.

Intimations that there might be action by minority holders of Union Pacific stock at the annual meeting of that company, which was held at Salt Lake City last Tuesday, proved to be without foundation. The existing Harriman management was in full control and selected the directors who were voted for on that occasion. The annual report of the company was not presented, but the management published the income account for the year ending June 30 last. This statement, comparing the figures with those for the year before, is as follows:

Year ending June 30	1907	1906	*Increase*
Gross transport'n receipts	$76,040,726	$67,281,543	$8,759,183
Oper. expenses and taxes	42,644,623	36,963,773	5,680,850
Net operating receipts	33,396,103	30,317,770	3,078,333
Fixed charges	8,652,621	8,882,911	†230,290
Surplus	24,743,482	21,434,859	3,308,623
Divid'ds on U. P. stock:			
Preferred stock	‡3,981,764	‡3,981,764	....
Common stock	‖11,728,824	‖11,640,834	87,990
Oregon R. R. & Nav. pfd.	‡232	‡268	†36
Total dividends	15,710,820	15,622,866	87,954
Surplus	9,032,662	5,811,992	3,220,669
Other income:			
Interest on bonds owned	299,838	297,910	1,928
Divid'ds on stock owned	*11,563,105	7,237,917	4,325,188
Rent from steamships, etc.	216,572	506,179	†289,607
Interest on loans and open accounts	....	2,287,809	†2,287,809
Balance	20,631,381	16,141,808	4,489,573
Dividend on Union Pacific common stock (4%)	7,819,216	§3,909,558	3,909,658
Surplus	12,812,165	12,232,250	579,915
Appropriations for betterments, improvem'ts and new equipment	1,959,002	4,200,000	†2,240,998
Surplus	10,853,163	8,032,250	2,820,913

* Does not include dividends of $2,015,000 declared since July 1, 1907, for account of year ended June 30, 1907, on shares of Atchison, Topeka & Santa Fe, Baltimore & Ohio and Illinois Central. † Decrease. ‡ Four per cent. § Two per cent. ‖ Six per cent.

The chief feature of this remarkable showing is that the income derived from the securities held by the Union Pacific, other than the stock of the Oregon Navigation and Oregon Short Line properties, increased by nearly $4,500,000. Furthermore, after paying 6 per cent. on the common shares out of the transportation operations, and 4 per cent. from its income derived from security holdings, there was a surplus of $12,000,000. At the same time the report is necessarily incomplete, as the greatest interest created in connection with Union Pacific's finances is the changes which have occurred in its holdings of stocks in other companies and the cost thereof. These latter facts will, of

course, not develop until the completed annual report comes out and permits an examination of the balance sheet and other accounts.

DECLINE IN SEPTEMBER BUILDING.

Special reports to Bradstreet's Journal from seventy-five American cities show a total estimated expenditure for building during September of $45,284,303, as against $52,860,652 expended in September a year ago and $53,013,138 in August, 1907. There is here shown a decrease of 14.3 per cent. from September last year and of 14.5 per cent. from the August total. In all, forty-six cities show increases, while twenty-nine cities show decreases. Practically the entire decrease from September a year ago is, however, accounted for by the decrease in the Greater New York. Thus the net decrease at all cities from September a year ago is $7,576,249, while the decrease in Greater New York (largely in Manhattan Borough) is $7,989,678. Therefore, if New York City, which contributes almost a fourth of the country's expenditure, is excluded, a gain of $413,329, or 1.2 per cent., is found in the rest of the country.

Five cities in Canada show a total expenditure of $1,693,276, as against $2,774,248 in September a year ago, a decrease of 38.9 per cent.

KANSAS CITY AS A GRAIN MARKET.

Editor of BRADSTREET'S:

SIR—The shortness of the wheat crop this year naturally attracts attention to the surplus wheat-growing states, and the biggest of those states are in the southwest. But few even in the grain trade, outside of those here, fully realize what has taken place in the way of grain growing west of the Missouri river in the past thirty-three years. I go back so far that I may compare Kansas in its early days with Oklahoma and Indian Territory, now in their early days. It will be seen by figures hereafter given that those sections are doing fully as well as Kansas did in its early days in the matter of wheat growing, and nearly as well in corn raising. Some may tell you that those states are not reliable crop growers. The same was said of the western half of Kansas twenty-five years ago. The writer of this article at that time wrote and warned people that western Kansas was nothing but a grazing country and that farmers there could expect nothing but crop failures. Now it is one of the greatest grain-growing regions in the world. Oklahoma and Indian Territory, in the matter of soil, are fully as good if not better than Kansas. All know that the states of the central west are no longer the great wheat growers of this country—in that respect "their glory has departed from them"—and that the big winter-wheat yields are now west of the Mississippi river, and the greatest crops are grown beyond the Missouri river.

Kansas, according to the government report, in 1875 raised only 12,700,000 bushels of wheat. Ten years later, in 1885, its crop was 11,197,000 bushels. In 1890 its yield was 28,195,000 bushels; at the end of the next decade, 1900, it was 82,488,655 bushels, and the next year (1901) it raised the record crop of 99,079,304 bushels. Last year (1906) the government figures made its yield 79,669,000 bushels, and Secretary Coburn put it at 93,292,980 bushels. This year (1907), in the face of a most unfavorable season, the crop is put at 66,174,000 bushels, or 25,134,000 bushels larger than Illinois, and 32,161,000 bushels greater than Indiana's, or nearly twice as large. The Ohio crop this year is 30,677,000 bushels—less than half as large as that of Kansas. And all of these states in years past were known as big wheat-growing states.

Wheat growing has not stopped with Kansas, but has moved even farther west. Oklahoma up to 1893 raised no wheat. The year following (1894) the government report made its crop 2,315,000 bushels. Nine years later, in 1903, the crop had jumped up to 24,482,000 bushels; last year (1906) its yield was 18,664,000 bushels, and this year, after the crop had been struck by frost in its milk stage, there was still raised 7,207,000 bushels. The Indian Territory raised no wheat till 1901, when its crop was 2,424,469 bushels, and last year (1906) its yield was 2,890,000 bushels. But the Indian Territory is more of a corn than a wheat state. It has been controlled all along by the Indians and is still dominated by them. Oklahoma and the Indian Territory combined are capable in a favorable season of raising as much wheat as Kansas. But wheat is not the only grain that is grown west of Kansas in great quantities. In 1894 Oklahoma planted in corn 204,888 acres. Six years later, in 1900, its acreage in corn was 981,967, an increase of 777,079, or 379 per cent. Last year (1906) the acreage in corn was 1,998.000, an increase the past six years of 1,016,033 acres, or 103 per cent. These figures, startling as they are, are nothing compared with what may be expected from that country ten years from now. In fact, farming may be expected to become more skillful and intensified than now, and Oklahoma may become a rival to her sister, Kansas, to the north of her.

Nebraska, too, has been doing great things the past few years in the matter of grain growing. This also is a comparatively new country in the grain business. As late as 1880 the government report showed that it raised only 12,922,000 bushels of wheat, and six years previous its crop was only 3,619,000 bushels, seven years after the state had been admitted to the Union, and in the matter of government a good deal older than Oklahoma now is. In 1890 the government made its wheat crop 15,315,000 bushels, and as late as 1900 its crop was only 24,810,000 bushels; but since then the state has made wonderful development in the way of wheat growing. In 1902 it raised a crop of 52,726,000 bushels; its crop in 1905 was 48,002,000 bushels; last year (1906) its wheat yield was 51,709,400 bushels, and this year, when the crop is short everywhere, the government report makes it 46,879,000 bushels. It has also become a great corn-growing state. As late as 1880 its corn crop was only 59,507,000 bushels. Eight years later it raised 144,217,000 bushels. In 1898 the government reported its crop at 158,754,000 bushels; in 1904 it was 260,942,335 bushels; last year (1906) its yield was 276,722,000 bushels, and the September report of the Department of Agriculture at Washington estimates its yield for this year at 218,000,000 bushels.

With this wonderful development in grain growing in recent years west of the Mississippi river, there has been a shifting of the grain trade of the west. The states just spoken of being directly tributary to Kansas City, the grain market here the past few years has grown greatly at the expense of the older grain centers east of us.

The following table, giving the receipts of wheat at the three leading western wheat centers at five-year periods, shows that the trade has gone west with the crop development, and that Kansas City, here at the mouth of the Kaw, is to be the great winter-wheat market of the future:

	Kansas City, bushels	*Chicago, bushels*	*St. Louis, bushels*
1878	9,014,201	29,713,577	14,325,431
1883	5,023,472	20,364,155	15,500,704
1888	1,750,308	13,438,069	13,010,168
1894	17,170,360	35,355,101	14,642,999
1898	28,741,300	35,731,556	14,240,252
1903	38,322,000	27,124,585	23,533,800
1904	39,159,900	24,457,347	23,148,133
1905	40,038,900	26,899,012	21,201,852
1906	37,423,000	28,249,475	17,646,005

That the trade here is alive to the changed position of its market and has kept pace with the development of the country round about it is seen from the broad and liberal elevator policy that Kansas City has adopted. In 1875 the storage capacity of its elevators was 700,000 bushels, and handling capacity 125,000 bushels daily. Ten years later, in 1885, the storage capacity of our elevators had increased to 1,890,000 bushels, and daily handling capacity to 675,000 bushels. At the end of the next decade the storage capacity of the elevators had increased to 4,860,000 bushels, and daily handling capacity to 980,000 bushels. From this forward, under the stimulus of the big crops that were being raised round about us, the facilities for handling them were developed even faster than the previous years. In the past ten years the storage capacity of our grain elevators has increased over 100 per cent., and the handling capacity even more. At the end of last year (1906) the combined storage capacity of the elevators here was 10,790,000 bushels, and daily handling capacity 2,621,000 bushels.

Thus has been built up here in recent years the greatest cash winter-wheat market in the country. Trading in hard-wheat futures has also developed here wonderfully in recent years, and Kansas City to-day ranks next to Chicago as a speculative market. Much of the hedging of sales and purchases of the trade tributary to Kansas City is now being made on this market rather than in Chicago, where most of it was done ten years ago. The fact that hard wheat is the contract grain here, and is the same kind of wheat that is being dealt in by the country shipper and the elevator man, has naturally drawn this trade to Kansas City. It is this combination of the cash business and future trading in hard winter wheat that is making this the great wheat market of the west. It enables the exporter who deals in hard winter wheat alone to protect his purchases in the country or on the market here by the sale of "futures" of the same kind of wheat that he has accumulated. Then, when a foreign sale is made, he buys back his "futures," which releases his cash wheat for foreign shipment. The same is true as to the elevator man and the domestic milling trade. Naturally, the building of such a wheat market here attracted the mills, and in recent years a number of big and improved ones have been built, until to day Kansas City ranks as the second milling center in the west. In 1895 the mills here manufactured 1,368,000 barrels of flour and consumed 6,156,000 bushels of wheat. Since then a number of large and up-to-date flour mills have been built. There are now seven here running "full blast" and turning out thousands of barrels of flour each day. Last year (1906) they manufactured 1,989,263 barrels of flour and consumed 8,951,667 bushels of wheat.

While wheat has taken the lead in the market here, there has also been a healthy growth in the coarse grain trade. In 1875 the receipts of corn here were only 1,258,700 bushels, and of oats 382,850 bushels. Coming down ten years later, the receipts were 8,219,162 bushels, and of oats 1,075,682 bushels. In 1896 the receipts were 13,215,300 bushels, and of oats 4,279,000 bushels. The next and last decade there was also a steady expansion of the trade, but not so rapid as the ten years before. The receipts here for 1906 were, corn, 15,882,000 bushels, and oats, 6,463,000 bushels. No one can meditate on these figures without feeling that here at Kansas City, in the center of the greatest grain-growing section of the world, is to be the "great grain market of the future."

CUTHBERT POWELL.

Kansas City, October 7.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Limitations—Contract Debt—Judgment.

The Supreme Court of Iowa held, in the case of Spilde vs. Johnsen, that a judgment is a contract debt within the meaning of a statute permitting a new promise to revive such debts after they have been barred by the statute of limitations.

Ordinance—Validity—Trading Stamps.

The Supreme Court of Colorado held, in the case of Denver vs. Frueauff, that an ordinance forbidding merchants to give out trading stamps in their business was not authorized by constitutional and statutory provisions making lotteries and gift enterprises unlawful.

Employer's Liability—Foreman—Direction

The Supreme Court of Pennsylvania held, in the case of Dougherty vs. Dobson, that the fact that a boy employed in a mill disobeyed a printed rule in obeying the direction of his foreman to remove threads from the cogs of a machine in motion did not shield the employer from liability for injuries resulting therefrom.

Note—Application of Payments.

The Supreme Court of Colorado held, in the case of McBride vs. Noble, that a creditor holding two notes, one an individual note and one a joint note, of the same debtor may apply to either note an undirected general payment, and that though a creditor may apply to a barred debt a general undirected payment, such application does not take the unpaid portion out of the operation of the statute of limitations where it does not appear that the debtor expressly recognized or acknowledged the debt.

Interstate Commerce—Sale—Agency.

The Kentucky Court of Appeals held, in the case of Commonwealth of Kentucky vs. Eclipse Hay Press Company, that where a corporation engaged in manufacturing hay presses in Missouri, and selling them through agents in Kentucky, solicited orders which were forwarded to the manufacturers in Kansas City, Mo., for approval, with the understanding that if approved the presses were to be shipped to the purchaser, was engaged in interstate commerce, for which there was no liability under section 571 of the Kentucky Statutes.

Express Company—Collection—Custom.

The United States Circuit Court for the Western District of Missouri held, in the case of Danciger vs. Wells, Fargo & Co., that there is no common law duty resting upon an express company to act as collection agent of the shipper and require payment for the goods as a condition of their delivery, but that such obligation, if assumed, arises only from an independent contract, express or implied, which the company is at liberty to refuse to make in any particular case notwithstanding any usage or custom it may have established or followed which cannot enlarge its legal duty as a carrier.

Insurance Policy—Surrender—Time.

The case of Lenon vs. Mutual Life Insurance Company, recently decided by the Supreme Court of Arkansas, arose out of a contract of insurance providing that if after a specified number of payments the policy should be forfeited for nonpayment of premiums, upon the surrender of the policy "within six months" a paid-up policy would be issued for such an amount as the reserve on the policy would purchase. The court held that the surrender of the policy within six months was not of the essence of the contract, but that the paid-up policy might be demanded upon the surrender of the old one within a reasonable time after the expiration of the six months.

Sale—Contract—Delivery—Usage.

In the case of The New Roads Oil Mill & Manufacturing Company, Limited, vs. Kline et al., recently decided by the United States Circuit Court of Appeals for the Fifth Circuit, it appeared that the defendant, which had recently built a mill for the crushing of cotton seed at New Roads, La., authorized a broker in New Orleans by telegraph to sell for it a quantity of oil cake for future delivery, "f. o. b. New Roads," at certain prices which had been quoted by the broker as prevailing in the market. The broker negotiated a sale to the plaintiff and wired defendant for its acceptance, which was also sent by wire. On receipt of the sale contract the defendant refused to execute the same because it provided for the delivery of the cake at a shipping port. In an action to recover damages for the breach of the contract, the plaintiff claimed that the delivery provided for in the contract was in accordance with the usage of the market and the rules of the International Cotton Seed Crushers' Association, of which, however, the defendant was not a member. The court held that the question whether a contract of sale binding on the defendant was made by the correspondence and acts of the broker, in view of the evidence as to usage, was one for the jury.

Foreign Corporation—Jurisdiction.

The New York Court of Appeals held, in the recent case of Grant vs. Cananea Consolidated Copper Company et al, that the service of a summons upon defendant, a Mexican corporation, by delivering a copy of the same to its president within the state of New York, where he resided and conducted the business of another foreign corporation, of which he was also president, whose office was within the state of New York and with which the defendant corporation had a sum of money to its credit, and whose business included the management and control of the business of the defendant corporation, was sufficient to give the Supreme Court of New York jurisdiction over the defendant corporation, although it did not transact business within the state otherwise than as above stated.

Mechanic's Lien—Building—Repairs.

In the case of Fitzpatrick et al. vs. Ernst et al., recently decided by the Supreme Court of Minnesota, it appeared that the plaintiffs agreed with the owner of a building, in 1902, to make all the improvements, alterations and repairs which the owner of the building would need in the future at the regular price of work and material with 10 per cent. added thereto. From time to time between September, 1902, and September, 1903, work was ordered and performed. A bill was presented at the end of the first contract and afterwards about monthly. In November, 1903, plaintiffs filed the statutory statement to secure a mechanics' lien. In September, 1903, the defendants became the owners of the building under the foreclosure of a mortgage. The court held that the plaintiffs could recover on their lien such portions of the work only as had been done within ninety days next prior to the filing of their lien.

Contract—Bond—Material Men.

The Supreme Court of Minnesota held, in the case of The Red Wing Sewer Pipe Company vs. Donnelly et al., that the order in which a contract for the construction of a sewer under the charter of the city of St. Paul and the bond given to secure the payment of amounts due material men and laborers under that contract are executed is not material; that after the bid has been accepted and approved, the bond may be executed before the contract, or the contract before the bond: that where the bond recites that the contract has been executed as of one date, the sureties are estopped from asserting that the president of the Board of Public Works actually signed the contract at another and subsequent date, and that the vendor of materials under such a contract is not required as a condition precedent to an action upon such a bond to trace the particular materials into the improvement itself and to show that such materials were actually employed in its construction.

Broker Acting for Two Principals.

The United States Circuit Court of Appeals held, in the case of McLure vs. Lake, that where a broker, although acting as agent for both the seller and purchaser of property, is given no discretionary power to negotiate the sale, but his employment is merely to bring the principals together and to keep them informed as to the condition of the property, the dual employment is not inconsistent with or contrary to public policy, and he may receive payment from both principals. The court said: "There certainly is no presumption that Gibson was employed by either of his principals to deceive the other, to suppress facts within his knowledge, or to give false information to the other as to the condition of the mines. The replication avers that he was to keep them informed as to the condition of the property, and this must be construed as an allegation that his contract with both was to furnish true information as to its condition, and the double employment for such purpose was not contrary to public policy, as the duty which he owed to one under such contract was not inconsistent with his duty to the other."

BUSINESS NOTES.

Anthracite Coal Shipments.

The total anthracite production for the month of September, 1907, was 5,442,334 tons, as compared with 4,527,886 tons in September, 1906, an increase of 914,448 tons. The production for the year to date is 49,645,616 tons, as compared with 40,295,646 tons in the nine months of last year, an increase of 9,349,970. The shipments of anthracite by months for four years have been as follows (in tons):

	1907	1906	1905	1904
January	5,249,046	5,458,084	4,408,578	4,134,245
February	4,503,720	4,712,099	3,922,601	4,326,269
March	5,235,814	5,797,167	5,258,567	4,375,033
April	5,916,583	488,203	5,278,041	5,407,786
May	5,999,272	3,254,230	6,005,158	5,185,079
June	5,924,260	5,676,018	5,844,052	5,728,795
July	5,602,435	4,981,448	4,546,743	4,623,227
August	5,716,552	5,400,511	5,041,838	4,325,734
September	5,442,334	4,527,886	5,082,232	3,957,600
October	....	5,381,768	5,205,604	5,431,542
November	....	5,182,153	5,421,584	5,124,068
December	....	4,836,028	5,395,113	5,063,144
Total	49,645,616	55,698,595	61,410,201	57,392,522

Fire Loss for Nine Months.

The fire loss of the United States and Canada for the month of September, as compiled by the *Journal of Commerce and Commercial Bulletin*, aggregates $11,449,400, which is a little over half a million more than was charged against the same month last year. The following table affords a comparison by months of the losses this year with those of 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,000
February	25,591,000	18,249,350	19,876,600
March	14,751,400	18,727,750	20,559,700
April	11,901,350	292,501,150	21,925,000
May	12,736,250	16,512,850	16,285,300
June	11,789,800	13,950,650	14,765,000
July	13,175,250	12,428,050	18,240,150
August	11,435,600	9,641,620	20,248,000
September	13,715,250	10,852,550	11,449,400
Total nine months	131,474,000	410,587,750	167,415,050

Thus it will be seen that the total for nine months is $167,415,050, a decrease of $243,172,700 from the similar period in 1906, but an increase of $35,941,050 from the like time in 1905. Of course the total for 1906 was enlarged considerably by the San Francisco fire loss, which occurred in April of that year, and which swelled the total to $292,501,150.

Pig-Iron Production.

While production of pig iron continues to increase over 1906, the September figures show that the tendency, as contrasted with recently preceding months this year, is to show a slight decrease. Thus, according to the *Iron Age*, the production in September was 2,183,487 tons, against 2,251,410 tons for August and 2,294,005 tons for May, when production was at a record point. For the nine months of the current calendar year the production aggregated 19,911,302 tons, the increase over the same period of 1906 being 1,730,540 tons, or 9 5 per cent., while, as compared with 1905, the increase is no less than 20.3 per cent. This table gives the monthly production (in tons) for the first three quarters of this year, with comparisons for 1906-07:

	1907	1906	1905
January	2,205,407	2,068,893	1,811,000
February	2,045,068	1,894,032	1,620,000
March	2,225,175	2,165,632	1,970, 00
April	2,216,558	2,075,645	1,922,041
May	2,294,005	2,098,746	1,967,586
June	2,231,510	1,970,733	1,793,000
July	2,259,682	2,013,402	1,741,935
August	2,250,410	1,922,717	1,830,000
September	2,183,487	1,970,962	1,898,873
Total	19,911,302	18,180,762	16,554,435

The Waning Hardwood Supply.

Although the demand for hardwood lumber is greater than ever before, the annual cut to-day is a billion feet less than it was seven years ago. In this time the wholesale price of the different classes of hardwood lumber advanced from 25 to 65 per cent. The cut of oak, which in 1899 was more than half the total cut of hardwoods, has fallen off 36 per cent. Yellow poplar, which was formerly second in point of output, has fallen off 38 per cent., and elm has fallen off one-half. The cut of softwoods is over four times that of hardwoods, yet it is doubtful if a shortage in the former would cause dismay in so many industries. The cooperage, furniture and vehicle industries depend upon hardwood timber, and the railroads, telephone and telegraph companies, agricultural implement manufacturers and builders use it extensively. The cut in Ohio and Indiana, which seven years ago led all other states, has declined one-half. Illinois, Iowa, Kentucky, Michigan, Minnesota, Missouri, New Jersey, Tennessee, Texas, West Virginia and Wisconsin have also declined in hardwood production. The chief centers of production now lie in the lake states, the lower Mississippi valley and the Appalachian mountains. Yet in the lake states the presence of hardwoods is an almost certain indication of rich agricultural land, and when the hardwoods are cut the land is turned permanently to agricultural use. In Arkansas, Louisiana and Mississippi the production of hardwoods is at its extreme height, and in Missouri and Texas it has already begun to decline. The Appalachian mountains contain the largest body of hardwood timber left in the United States. On them grow the greatest variety of tree species anywhere to be found. Protected from fire and reckless cutting, they produce the best kinds of timber, since their soil and climate combine to make heavy stands and rapid growth. Yet much of the Appalachian forest has been so damaged in the past that it will be years before it will again reach a high state of productiveness. Twenty billion feet of hardwoods would be a conservative estimate of the annual productive capacity of the 75,000,000 acres of forest lands in the Appalachians if they were rightly managed. Until they are we can expect a shortage in hardwood timber.

Stock Transfer Tax.

Returns from the New York state stock transfer tax during September were greatly below August, and also far below the total for September, 1906 and 1905. The amount received by the state was $262,302, a loss of $76,922, or 22 per cent., as compared with August, a loss of $346,327 from the corresponding month a year ago, or 56 per cent., and a loss of $110,199 from September, 1905, or 29 per cent. With the exception of July, 1906, and June, 1907, it was the smallest total received in any one month since the inception of the law. The amount received for the first nine months of the year is $3,014,362, a decrease of $1,812,572 from the same period of last year, or 37 per cent. The monthly average so far is $334,929, against an average of $571,721 for the whole of 1906, and an average of $478,146 for 1905.

	1907	1906	1905
January	$309,478	$311,321	....
February	309,048	490,498	....
March	683,271	427,498	....
April	397,105	560,300	....
May	318,194	503,571	....
June	195,740	424,071	$466,301
July	274,754	106,046	308,790
August	339,224	795,000	477,784
September	262,302	618,629	372,501
October	....	617,466	405,784
November	....	539,720	607,152
December	....	516,534	728,409
Total	3,014,362	6,500,654	3,346,721
Monthly average	334,929	571,721	478,146

Cotton Supply.

Mail advices bring the annual report of the International Federation of Master Cotton Spinners and Manufacturers' Associations, giving, under date September 30, statistics of consumption of cotton for the year ended August 31, 1907, and the stocks of cotton in spinners' hands on August 31, 1907, in conjunction with the returns of the United States Census Bureau. Actual returns were received from firms owning 98,500,000 spindles.

CONSUMPTION.

	Bales		Bales
American	11,668,000	Egyptian	617,000
Indian	1,708,000	Sundry countries	188,000
United States	996,000		
Total			14,909,000

STOCKS (INVISIBLE SUPPLY).

	Bales		Bales
American	2,074,000	Egyptian	140,000
Indian	912,000	Sundries	209,000
Total			3,335,000

STOCKS AMERICAN COTTON (VARIOUS COUNTRIES).

	Bales		Bales
England	292,000	Austria	106,000
Germany	245,000	Italy	143,000
France	104,000	United States	188,000
Total			2,074,000

Increase in number of European spindles reporting over previous year, 8,000,000, which, with American government bureau report, shows an actual return received from the owners of 98,500,000 spindles. Consumption of East Indian cotton in Europe during the year shows an increase on the previous year of 782,000 bales, and the stocks of East Indian cotton in European spinners' hands show an increase of 569,000 bales.

INVISIBLE SUPPLY OF AMERICAN COTTON.

	Increase
Europe, 1,078,000, against 684,000 on the corresponding date last year	394,000
United States, 996,000, against 687,000 on the corresponding date last year	309,000
Total	703,000

CURRENT BUSINESS NEWS.

Commercial.

The N. K. Fairbank Company estimates stocks of lard held in the United States, Europe and afloat therefor as follows; October 1, 1907, 288,711 tierces; September 1, 1907, 334,115; October 1, 1906, 258,101; October 1, 1905, 274,417; October 1, 1904, 240,417; October 1, 1903, 243,327.

The following table shows for each of the twenty-five principal corn states the condition on October 1 in each of the last three years and that on September 1, 1907, with the ten-year averages:

	Oct. 1, 1907	*Sept. 1,* 1907	*Oct. 1,* 1906	*Oct. 1,* 1905	*10-yr av'ge*
Illinois	86	86	87	96	84
Iowa	70	76	97	90	82
Nebraska	69	75	90	95	77
Missouri	84	86	90	94	80
Texas	78	80	76	76	73
Kansas	67	72	85	87	69
Indiana	84	84	96	99	86
Georgia	92	92	89	86	82
Ohio	78	77	99	91	84
Kentucky	88	87	99	95	82
Tennessee	86	86	94	84	78
Alabama	85	87	88	84	79
North Carolina	89	92	84	83	82
Arkansas	60	62	93	79	78
Mississippi	71	77	88	71	76
Indian Territory	168	72	93	93	87
Oklahoma	66	70	95	83	72
South Carolina	93	93	81	75	77
South Dakota	72	70	93	95	82
Virginia	86	86	92	97	87
Louisiana	70	75	84	69	81
Minnesota	73	76	95	95	85
Michigan	76	78	95	89	84
Wisconsin	77	80	98	96	87
Pennsylvania	75	70	95	95	86
United States	78.0	80.2	90.1	89.2	79.6

The following table shows for each of the thirteen principal oat states the preliminary estimate of yield per acre and total production this year, with final figures for 1906 for comparison (in bushels):

	Per acre, 1907	*Total,* 1907	*Per acre,* 1906	*Total,* 1906
Iowa	24.2	100,703,000	33.8	140,777,000
Illinois	24.5	89,498,000	29.5	107,763,500
Wisconsin	22.0	56,056,000	37.4	91,630,000

Consul Thomas H. Norton, of Chemnitz, advises that the German statistical office has prepared a very careful comparative statement showing the general increase in the prices of all commodities during the past few years. As a basis for comparison, the office adopted the average prices of commodities during the decade ending in 1898. With these prices are contrasted the rates current in the month of June, 1907. There is a general increase, but the ratios among the different categories of articles show wide divergences. Classifying articles under five principal heads, the following are the percentages of increase: Cereals, 25; animal products, 27; agricultural products of foreign origin, 20; textiles, 55, and mineral products, 60.

Secretary Wells, of the Iowa Grain Dealers' Association, estimates the corn crop of that state at 300,000,000 bushels, against 373,000,000 bushels last year and an average of about 302,000,000 bushels. He says that about 25 per cent. of the crop is soft; that about 80 per cent. of the total crop is usually fed in the state, and that as the high prices discourage feeding, the state may have as much corn to ship out as last year.

The Missouri October crop report makes the condition of corn 84, against 83 in September and 90 at this time a year ago; 90 per cent. of the crop is safe from frost. The seeding of wheat has been delayed by dry weather, and the indications point to a shortage of 10 per cent. in the acreage.

The Rio Tinto Copper Company, the largest copper-producing concern in Europe, has declared a dividend of 47s. 6d., a reduction of only 2s. 7d. from the last previous declaration, whereas a cut of as much as 10s. had been looked for.

Foreign crop conditions as published Tuesday in the Liverpool *Corn Trade News:* United Kingdom—The weather continues favorable for plowing. In the districts where wheat was seeded late, harvesting is being delayed. France and Italy—The rains predicted last week have fallen, and the outlook is now favorable. Supplies are liberal. Germany—The weather continues favorable, and latest reports indicate an improvement in the potato outlook. There are some complaints heard, however, regarding the condition of wheat. Austria-Hungary—The drought has been relieved by the advent of good rains. Roumania—Latest advices are that it is generally droughty, and that plowing is proceeding slowly. The outlook for corn is very poor. Bulgaria and Turkey—Droughty conditions prevail in these countries. Russia—Drought is reported in the southwest, while in the southeast there has been a light fall of rain, which was, however, insufficient. In the interior there have been good rains. Supplies of wheat, however, are generally light. Argentina—The outlook for the crop continues quite favorable. The weather is variable, and a settled period is needed. There is no alarm felt regarding the locusts, and reports are reassuring.

The secretary of the South Dakota Board of Agriculture estimates the wheat crop at 30,292,000 bushels, including 2,250,000 bushels durum. Last year's final, 41,955,000 bushels.

The September statement of the British Board of Trade shows increases of £281,400 in imports and £4,631,200 in exports. Principal increases in exports were: Coal, £1,000,000; manufactured goods, £3,000,000, of which textiles totaled £1,000,000. From these returns, imported goods reëxported being omitted, the following comparative table of the United Kingdom's September trade in merchandise may be compiled:

	1907	1905	1905
Imports	£45,349,975	£45,068,557	£45,732,648
Exports	35,156,353	30,525,153	29,350,460
Excess imports	10,193,622	14,543,404	16,382,188

Excess of imports in September, 1904, was £17,145,347; in 1903, £22,135,433; in 1902, £17,955,390, and in 1901, £16,237,489.

The effect of frost is thus stated by Habersham King's *Cotton Record:* "Given conditions favorable to its formation, clear weather and no wind, white frost will form at a temperature of 42 degrees, growing heavier with lower temperatures down to 32 degrees, when black frost and ice form. The latter is a 'killing' frost. White frosts do not kill or stop the growth of cotton, except that the latter sometimes occurs with temperatures between 36 and 32 degrees. A sudden fall to frost temperatures, 35 to 42 degrees, is sometimes of actual benefit, as putting a stop to unfavorably wet weather, killing the superfluous foilage through scorching the leaves, and thus opening the bolls to the sun's rays. The chief danger in a freeze, 32 degrees and below, lies in the attending conditions. If the boll is snappy it freezes; then if wet weather follows it rots and is lost. If warm weather follows immediately it frequently ferments and rots. If clear, cool weather follows, as is generally the case, the boll dries out and forms the 'frost tinges,' making, as a rule, a very desirable spinning cotton from the southern half of the belt and poor spinning, short stapled cotton from the northern half."

The Kentucky crop report makes the condition of corn 94 on October 1, as against 91 September 1.

The 1907 pickle crop is all gathered and is very disappointing. Acreage planted was reduced very considerably below what had been contracted for, and the weather conspired to make the yield from the vines small, so that present stocks in first hands at the west are less than 50 per cent. the quantity usually held at this time of the year.

The London *Economist's* index number of average prices of commodities at the opening of October was 2,457, comparing with 2,519 on September 1. The *Economist* says: "There is little doubt that the fall was mainly due to slackening activity in trade, since it has manifested itself principally in quotations for raw materials used in staple industries." It must be remembered, however, that the decline has been greatly assisted by the natural reaction from recent speculative manipulation of copper and other metals. The *Economist's* index number stood last June at 2,601, the highest reported in any one month or year since 1876. On December 31 that year it stood at 2,715. In the middle of 1897 the number was 1,885; since then the advance to this year's high level was almost continuous. Comparisons follow:

October 1, 1907	2,457	October 1, 1906	2,355
September 1, 1907	2,519	October 1, 1905	2,219
August 1, 1907	2,571	October 1, 1904	2,148
July 1, 1907	2,594	October 1, 1903	2,114
June 1, 1907	2,601	October 1, 1902	2,002
May 1, 1907	2,549	October 1, 1901	1,980

The Michigan crop report for October estimates the corn crop at 49,000,000 bushels, against 61,000,000 last year. Oats, 28,000,000 against 40,000,000; wheat, 10,500,000 against 12,000,000; rye, 5,000,000 against 5,500,000.

Drought continues in southwestern Russia, according to Broomhall's special report, although there has been some rain in the southeast. His advices point to a smaller Australian wheat crop than that of last year, when it was 70,650,000 bushels. The outlook is bad in the largest producing parts—New South Wales and Victoria. Chartering has ceased.

Financial.

The temporary exhaustion of surplus capital is at present restraining corporations from issuing new securities, yet the aggregate output since January 1 has reached the unparalleled total of $1,928,968,500, exclusive of government bonds. The following table, compiled by the *Journal of Commerce*, summarizes the issues for the nine months by classes:

	Authorized	*Issued*
Railroad notes	$226,242,000	$255,432,000
Railroad bonds	610,986,000	285,103,000
Railroad stocks	507,449,600	154,501,000
Total	1,344,677,600	695,036,000
Industrial notes	65,700,000	65,520,000
Industrial bonds	117,052,000	132,900,000
Industrial stocks	206,259,900	131,932,100
Total	389,021,900	330,352,100
Grand total	1,733,699,500	1,025,388,100
Municipalities		195,269,000

September was a light month, its contribution to the year's output being only $76,531,000 authorized and $63,981,000 issued.

It is announced that the Lake Superior Company will on November 1, 1907, pay to the stockholders of the Great Northern Railway Company, of record October 15, 1907, a dividend equal to 1½ per cent. of their holdings of Great Northern stock. This dividend will be paid coincidently with the regular dividend of 1¾ per cent. payable November 1, 1907, to the preferred stocks of the Great Northern Railway.

Reviewing last month's operations on the London Stock Exchange, the *Bankers' Magazine* of that city says: "Values are, for the most part, well above the level of the preceding month, the aggregate increase in a selected list of stocks approaching thirty-four millions sterling. The exact figures are as follows:

Aggregate value of 387 representative securities on August 20, 1907	£3,498,130,000
Aggregate value of 387 representative securities on September 20, 1907	3,531,957,000
Increase	33,827,000

By a resolution of the foreign bondholders of Salvador, the part of the custom house revenues of the country which had been pledged as security for the subsidy granted to the Salvador Railway Company has been turned over to the government of the republic. The outstanding debt of Salvador in 1889 was about $3,500,000. In 1900 this debt was converted into securities of the Salvador Railway Company, a British concern, which received from the government of Salvador an annual subsidy of $120,000 per year, to last eighteen years, from 1899. This subsidy was specially secured upon 15 per cent. of all the maritime import duties of the republic. The railroad, which is about 100 miles in length, all in operation, was at first run at a loss, but in 1904-05 there was a surplus, and it is presumed that there was a surplus in 1905-06, which would do away with the necessity, under the agreement with the government, of the payment of the subsidy.

Official announcement is made that the Western Electric Company will create a bond issue of $15,000,000. The directors have called a special meeting of the stockholders, which will be held in Chicago on November 5, for the purpose of ratifying the proposition made by the board.

The Tennessee Coal, Iron & Railroad Company has issued a circular to its stockholders offering the privilege of subscribing to $3,750,000 new stock at par. This privilege is limited to the extent of 12½ per cent. of the present holdings of stockholders, as of October 10.

A Tokio cablegram states that the Viceroy has obtained the approval of the Chinese imperial government to an American loan of $25,000,000, which will be used in the construction of public works.

On Friday bar silver declined in London to 29 3-16d. an ounce, the lowest since March 13, 1906, when it was 29 3-16d. In New York the price of the metal was 63¼ cents. On August 2 bar silver brought 69⅞ cents the ounce in New York. The decline was ascribed to the drought in India, which has seriously damaged the crops, the result being a contraction in all lines of industry there. Instead of supporting the market by continued purchases, India finds that it has a surplus of the metal on hand and has turned seller, thus causing the supply to far exceed the demand.

Industrial.

The *Iron Trade Review* says: "In the smooth and orderly way in which a slowing down is being prepared for in the iron and steel trade lies the most hopeful sign for the future. Both producer and consumer have been fully alive to the possibilities and are preparing to meet the worst that can come. What is guarded against is half conquered, and there is thus the best reason to believe that it is not the worst that will come. Usually it is the unexpected which comes, and if it be so in this case, then the result will be the unexpectedly good and not the unexpectedly bad."

It is stated that the Bethlehem Steel Corporation has laid off within the past fortnight or so about 800 men from a total of 8,000. Most of these employees were laborers employed on new construction work, but quite a number of skilled machinists were dismissed.

It is reported that the Philadelphia & Reading Railway Company has made a big reduction in the number of employees at its car shops at Pottsville, Pa.

It is stated that the United States Steel Corporation, which is constructing the largest steel mills in the world at Gary, Ind., has determined to use artificial gas in operating all the machinery in the plant. The corporation will probably undertake to light all the cities and supply electricity to all the electrical lines in northern Indiana. The gas will come from coke ovens and there will be sixteen blast furnaces.

The complete shipments of iron ore in tons for September and the season to date are as follows:

	Sept., 1906	*Sept.,* 1907
Escanaba	833,681	642,251
Marquette	411,582	417,684
Ashland	384,968	407,572
Superior	869,678	1,155,464
Duluth	1,750,116	2,203,038
Two Harbors	1,179,636	1,201,044
Total	5,429,660	6,217,653
	To Oct. 1, 1906	*To Oct. 1,* 1907
Escanaba	4,270,294	4,473,417
Marquette	2,120,519	2,342,149
Ashland	2,636,025	2,722,331
Superior	4,448,174	5,571,918
Duluth	8,334,388	9,406,283
Two Harbors	6,341,357	6,043,108
Total	28,150,755	30,559,206

Railroads.

The Vanderbilt interests have decided to extend the Pittsburgh & Lake Erie Railroad from Youngstown, Ohio, to Lorain, Ohio. This will give the Vanderbilt line one of the shortest and most direct outlets to the lakes from the Pittsburgh district, and it is understood that an agreement has been made with the Jones & Laughlin Steel Company at Pittsburgh to handle its big ore tonnage from the lakes.

Shareholders of the Cincinnati, Hamilton & Dayton Railway, by unanimous vote Tuesday, ratified the several agreements which have been worked out in the settlement of the troubles of the company growing out of the merger with the Pere Marquette and other lines.

Miscellaneous.

For the first eight months of this year the total immigratiion to Canada was 216,865, an increase of 50,058 over the first eight months of 1906, and exceeds the total immigration during the whole six years 1896 to 1902.

Bulletin No. 2 of the Office of Public Roads shows that of the 2,151,570 miles of public road in the United States in 1904, 153,664 miles had been improved. In states where land is worth less than $20 an acre, only 1.9 per cent. of roads are improved, while 9 per cent. of total mileage is improved in states of an acreage value exceeding $20; in these states farm values have risen from this cause alone in some cases by from 50 to 500 per cent. California has 2,541 miles surfaced with oil; South Carolina uses sand clay mixtures, Maryland paves with shells and Ohio with brick. The total outlay on roads during 1904 was $79,771,417.87—less than was spent in deepening waterways. New York state spent most, amounting to $1,056,460, but since 1904 it has forged far ahead of sister states by authorizing the expenditure of $50,000,000 on 75,000 miles of highway, the work to be done on a scientific basis by altering the routes, paving and providing perfect drainage.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Stringent money market conditions, delay in movement of some leading crops to market, and unseasonably warm weather in some sections have operated to check the fullest development of wholesale trade for next year and of retail trade in seasonable goods. It is worthy of note, however, that western, southwestern and southern jobbers report an increased volume of reorder business, indicating that country merchants have had a prosperous fall season so far, and that early conservative buying necessitates repair of broken stocks. Collections are irregular, some improvement being noted at the south, where the cotton crop has moved in good volume, but otherwise there is little new to note in this respect. It might be well to point out, however, that reports of delayed collections at some cities arise largely from the fact that many concerns see fit to take the full time allowed instead of, as in other years, discounting their bills. There is general agreement, too, that much southern paper maturing in October has been promptly met. At the same time the disposition to hold cotton is reflected in slower than normal payments, particularly in the southwest, and the scarcity of commercial bills in the exchange market shows that the movement, as a whole, of our crops abroad is later than usual. A favorable feature of the week has been the strength of all cereals and of flour, large foreign demand being the assigned cause, although the smaller than earlier indicated outturn, as compared with last year, of most of the country's crops, shown by the Agricultural Department's October report, is an independent influence making for high prices of all farm products.

Reports from leading industries are not greatly changed from a week ago. Iron is quiet, and the volume of finished goods ordered is smaller than some time ago, although rails and structural material are slightly more active. The coal trade is active east and west, bituminous grades leading, with scarcity of cars and boats still a subject of complaint. Building materials as a whole are quieter, in keeping with the reduced expenditures reported from month to month by BRADSTREET'S, with yellow pine showing most concessions and hardwoods most strength. Low lumber and naval-stores prices are an influence on trade at some southern centers. In the leather and shoe trades the heavy curtailment of production in sole and upper leathers has steadied prices, but eastern shoe shipments are nearly 5 per cent. less than a year ago, and strikes affect operations at large western markets. The cotton-yarn market is still dull and weak and some heavy cottons are easing, but ginghams and prints are strong for spring delivery. There is general agreement that cotton goods at first hands are quiet, and commission men are devoting their energies to pushing deliveries, which are becoming more easily procured as mills catch up with orders. The wool markets are strong, in sympathy with foreign markets, and staple wools are well cleaned up, while shorter staples are less in demand, and the men's-wear season in woolens has not been entirely satisfactory, some cancellations being reported. Copper is lower, as is tin, and the first named metal is now down to a point where new buying is possible. The security market at New York is dull, with low-priced railway and industrial stocks and bonds striking new low records, on talk of higher money, possible gold exports and large shipments of money to the west. Clearings are smaller than last week and last year, with a slight increase in the number of cities showing decreases as compared with a year ago.

Production and consumption of iron and steel continue at a heavy rate, the output of pig iron in September being only 3 per cent. less than that reported for August, but new business for current shipment is light, and there is no interest displayed as regards far future deliveries. Some southern iron has been disposed of at $18.50 for this year's delivery, but it is said that the smaller interests are shading that quotation. Thus far there has been no marked increase in furnace stocks, and, as a matter of fact, it is probable that furnaces will be blown out if it becomes necessary to prevent heavy accumulations of stocks. Iron-ore shipments for the season will probably aggregate 41,000,000 tons, shipments the last few months having been exceptionally heavy. Steel billets are weaker in western territory. It is reported that some independent interests are about to change from the manufacture of foundry pig iron to Bessemer pig, which fact may tend to depress quotations for that grade of metal. Business in structural material is a trifle more active, but future trade is by no means up to expectations, for which the tightness of the money market is largely responsible. Specifications on old contracts are heavy, and orders for 7,000 tons of plates to be used in the construction of two new lake boats have been taken, and it is reported that Japanese interests have placed an order for 3,000 tons of fabricated steel shapes. Demand for steel rails has picked up somewhat, the week's tonnage amounting to 35,000 tons, but financial difficulties and the failure of the manufacturing and railroad interests to agree on specifications retard the placing of much new business. Demand for cast-iron pipe is comparatively light, although the leading interest has taken an order for 6,000 tons for Los Angeles, and a contract for 6,200 tons for Cuba, which it was thought would go abroad, has been awarded. Coal is in active request the country over, demand for bituminous leading, with top grades scarce and railway facilities inadequate. Copper and tin are weaker, the pressure to sell the former metal being very marked. Quotations for lake brands for future delivery are now on the basis of 14 to 14¼ cents, while for electrolytic as low as 13½ to 13⅝ cents has been named.

Marked strength has been shown by the cereal markets this week, wheat dominating and leading the movement, which has resulted in the highest prices reached since August, 1905. General agreement is had that the strength of the foreign and particularly the British markets has been the chief price-moving feature, but this has been aided by the light movement in this country, the failure of supplies to increase as usual, and reports that interior millers were bidding actively for wheat in competition with foreign buyers. The world's shipments last week were very large, especially from this country, Russia and the Danube. Toward the close of the week, crop-damage reports were numerous from Australia, India and Argentina, which latter country is relied upon to furnish large supplies after January. Cash wheat is 5 cents higher since last Friday and 7½ cents higher than on the first of the month, while 34 cents, or 37 per cent., higher than a year ago. Flour also is 30 cents higher for the week. Corn sympathized with wheat, but also felt the influence of the light offerings and movement and the reduction of estimated yield based on government figures. Corn is 2@3 cents higher on the week and 21 cents higher than a year ago. Oats were rather neglected after great speculative activity ranging over a year past, but are 2 cents higher on the week.

Lighter and later than earlier expected crop movement, caused apparently by farmers holding cotton, particularly in the southwest, and talk of the December option being heavily oversold, were elements of strength in cotton, which caused an advance of 20 points from the low point of the season reached on October 3, and placing it about on a level with the prices ruling on the first of the month, but 170 points lower than at the outset of the season. Failure of predicted frosts to arrive late in the week, however, caused the loss of most of this advance. Cotton, despite the heavy decline in December, is still 1 cent higher than a year ago at this date.

Expenditures for building construction in this country are running smaller than those of a year ago, month by month. Special reports to BRADSTREET'S from seventy-five cities of the United States show there was expended during the month of September $45,284,303, a decrease of 14.3 per cent. from September a year ago and of 14.5 per cent. from August, 1907. Forty-six out of seventy-five cities show increases over September a year ago, but large reductions at a few cities offset these. Thus New York City, which contributes nearly one-fourth of the entire country's building, shows a decrease of 41.6 per cent., which decrease almost offsets the entire net gain at all other cities.

The New York stock market is nervously irregular and has displayed at times rather decided weakness, with declines throughout the list, due to high money, threatened gold exports and heavy foreign liquidation. Other unfavorable features were the failure of the expected Northern Pacific extra dividend to materialize and the disquieting revelations regarding traction finance at New York. Both industrial and railroad stocks suffered equally, the copper shares being also depressed on further concessions in the metal. Foreign exchange is very strong on repayments of foreign loans and scanty supplies of commercial bills. Demand sterling is 4.86.15. Gold shipments to Paris were fully expected, but were averted by a decision of the Bank of France not to allow interest on specie in transit.

The movement of grain supplies in September favored the bulls. Ordinarily there is a large increase in American and Canadian visible supplies during September, but this year there was a good-sized decrease. European supplies also did not gain nearly as heavily as a year ago. The net result was an increase in the world's visible stocks only one-tenth of the size of that of a year ago. BRADSTREET'S reports from all obtainable visible supply points in this country and Canada showed a decrease of 3,600,000 bushels from September 1 to October 1, as against 19,000,000 bushels increase a year ago. European supplies increased 7,400,000 bushels in September, against a gain of 12,500,000 bushels a year ago, and the world's visible stock increased only 3,800,000 bushels, against 31,900,000 bushels increase in the same period of 1906.

The October 10 report of the Agricultural Department confirms the reports of cereal crop deterioration in recent months, pointing, as the quantitative estimates now do, to smaller yields of most crops than a year ago. The total wheat and corn yields promise to be 15 per cent. smaller than in 1906, oats are 23 per cent. smaller and barley 17.4 per cent. less. The wheat yield promises 625,567,000 bushels, corn 2,491,000,000 bushels and oats 741,521,000 bushels.

Lessened yields of leading crops and other agricultural products, improved export demand and seasonal changes in consumption were all features strengthening to prices of many food products in September, lessening the effects upon the general level of staple values of the downward swing of some raw textiles, pig iron, copper, lead, crude rubber, hay and low-priced cotton goods. Something like hesitation was shown in the general downward trend of staple commodities, which has been a feature since March 1, 1907. The general index number on October 1 was $8.8506, an increase of two-tenths of 1 per cent. over the September 1 level, though a decline of 3 per cent. from March 1. Compared with a year ago on October 1, the index number shows an advance of 3.4 per cent., while the gain over the comparatively high level set on February 1, 1900, is 7.5 per cent. A gain is also shown of 55.2 per cent. over the low-water-mark level of July 1, 1896.

Bank clearings for the week ending October 10 aggregate $2,721,039,000, 6 per cent. less than last week and 12 per cent. below this week last year. Outside of New York exchanges amount to $1,141,045,000, a loss of 3 per cent. from last week, but a gain of 3 per cent. over the week last year.

Business failures for the week ending October 10 number 192, against 177 last week, 192 in the like week of 1906, 183 in 1905, 196 in 1904 and 203 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending October 10 aggregated 5,295,292 bushels, against 4,731,950 bushels last week, 3,257,886 bushels this week last year and 4,719,898 bushels in 1901. For the first fifteen weeks of the fiscal year the exports are 53,745,815 bushels, against 48,052,929 bushels in 1906-07 and 88,830,391 bushels in 1901-02. Corn exports for the week are 343,694 bushels, against 498,374 bushels last week and 1,202,430 bushels in 1906. For the fiscal year to date the exports are 15,371,986 bushels, against 10,502,791 bushels in 1906-07.

IN CANADA.

Canadian wholesale trade is of satisfactory volume, though feeling the check imposed by high prices or actual scarcity of money. Country trade, however, is still rather quiet, which is, perhaps, chargeable to the mild weather and the fact that farmers are busy. Production and exports of dairy products are behind a year ago, but grain exports are heavy. Collections from city points are good, but country payments are still rather backward, particularly in the northwest. Montreal reports money tight but that early retail buying has not been excessive, and good reorders may be expected. Toronto reports business good as a whole, but in some lines of dry goods, not up to expectations. Canadian cotton mills still have six months' orders on the books. Winnipeg reports a large quantity of below-grade grain likely to be realized from the northwest crop this year. The scarcity of money affects business. In British Columbia money is tight and labor is scarce. Export and import trade is large. Failures for the week number 24, as against 32 last week and 18 in this week a year ago. Clearings for the week aggregate $84,784,000, an increase of 1.7 per cent. over last week, but a decrease of 1.6 per cent. from this week a year ago. Building reports from five leading cities for September show a decrease of 39 per cent. in expenditure from a year ago.

TRADE REPORTS.

At New York business in silks, dress goods and cottons is good, but woolens for men's wear have not been doing so well. Commission houses with large woolen departments say there has been a decline in sales since September 1, and during the past few days many cancellations have come in. No cancellations, however, are reported in connection with silk orders for spring delivery or for dress goods. Prices on cotton goods continue firm, but quotations on yarns are off 10 per cent., and it is expected that this will in due time have an effect upon the piece goods. Money is not much easier and collections are not improving. This does not mean that firms are behind in payments, but they are not discounting so much as in other seasons. In clothing business is fair, but there is a general disposition towards conservatism. Collections are poor. Raw silk is quiet, and manufacturers are purchasing only what they absolutely need, despite a rumored advance in price. In cloaks, suits and waists,

business is very active and shows a steady increase, orders being principally from out of town. Collections continue good. Retail trade is steady. The strike in the local fur trade has ended, the operatives losing and returning to work on the old terms. While it lasted manufacturers disposed of the accumulated made-up goods, but against this they were unable to complete new orders. The millinery trade appears to be doing well, but collections in that line as well as in most others are very slow. Manufacturers of shirts, neckwear and gloves continue to report a large volume of business. Jobbers of hosiery and knit goods are active, sales being in excess of last year's. Some dealers believe the business is overdone, but the general opinion is that conditions are favorable. In the wholesale notion line most houses appear to be well stocked, and there is a general disposition to go slow; business shows a falling off and collections are only fair. Wholesale grocers report a satisfactory business, though the stringency of money prevents some from carrying stock which will be needed later. Retail trade is active, fancy groceries being freely purchased. Butter receipts are light, demand is good and market firm. Cheese is steady. Fresh eggs are freely asked for, but refrigerator eggs are dull. Flour receivers report an increase in sales, attributed to the strength of the market for wheat, and jobbers are paying better prices. Supplies of live stock and dressed meats are equal to the demand, and prices for the higher grades are very firm. Notwithstanding the advance in prices, there does not appear to be any falling off in retail trade. Demand for automobiles shows no diminution, and it is estimated that the output for the year will reach 45,000 machines. Trade in hardware keeps up fairly well, although a number of dealers report purchases only for immediate wants on account of stringency in money. Importers of china and glassware, as a rule, have received very satisfactory orders, and the volume of business has averaged well up with preceding year. The larger manufacturers of gas and electric fixtures have had a very satisfactory trade so far, but, like all other lines, have been cramped for ready money. Payments are very much slower than for several years past. Considerable export business has developed for copper, and it is thought local buying will now start in. Pig iron continues quiet, but structural steel makers are still busy, though new business has not been fully up to expectation. Electrical machinery manufacturers are also busy, but are holding buyers to terms as nearly as possible. Trade in leaf tobacco is dull, prices continue high and manufacturers are buying only to supply present wants. The high price of the raw material handicaps manufacturers of cigars, who find desirable goods scarce. Drugs and chemicals are fairly active. Offerings of anthracite coal are only normal, and are being readily absorbed. The hide and leather trade in general is quiet and purchases are made on a conservative basis. Sole leather tanners are holding firm on prices. Glazed kid is in very poor demand. Despite the fact that prices have receded the crude rubber market shows very little activity. Business in white lead and the oxides is lighter, but manufacturers are sold ahead and prices are firmly held at the recent decline. There has been some improvement noted in the real estate market, especially for residential property, but business is far from active and is only about half that of the corresponding month of last year. Money for speculative operations is difficult to obtain and no revival of this branch of the business is looked for in the near future. Conditions in the lumber and building material trades show no important changes. In the paper trade demand continues good, with prices very firm, but collections are still slow. Manufacturers of low-priced jewelry are doing an active business, but retailers of the higher grade of goods find trade dull.

The following telegrams show trade conditions at the cities mentioned for the week ending October 11:

BOSTON.—Dry-goods sales by jobbers continue in good volume, although retail trade is backward, owing to warm weather. Collections are slow, and much interest is felt in the result of October retail business. Cotton goods in all lines are strong, and in many there is a notable scarcity of stocks on hand. Considerable inquiry for goods has been received by local jobbers from cutters, and others from leading dry-goods centers in the country. Wholesale millinery business is of good volume. Men's clothing, furnishing goods, hats, etc., have been sold at wholesale to a large extent. Leather is still quiet, although conditions are improving. Sole leather is well sold up. Patent leathers are not selling so freely as was anticipated. Shipments of footwear are not up to last season's. Although conservatism continues to characterize operations in the paper market, there is a very fair and gradually increasing volume of business. Prices continue firm on account of the sustained cost of raw materials. It is stated that the writing-paper manufacturers have decided not to advance prices at present, but book paper has been marked up 15 cents per 100 pounds, and it is rumored that coated paper is likely to advance soon. Trade in house-furnishing lines is of fair volume, but collections continue slow, and fall business is not so large as was anticipated earlier in the season. Wholesale trade in anthracite coal is not very active, but considerable is arriving on contract. Bituminous is being delivered at the wharves in better time, but the shortage in the market is still apparent. Retail trade holds fair, and another increase in price is rumored. Business in paints and oils and painters' supplies is up to the usual proportions at this season. Building supplies, such as cement, drain pipe, brick, etc. are in seasonable demand, prices remaining firm. Dealers in iron and metals look for an improvement in the market in the near future, buyers who have been holding off appearing ready to talk prices and showing a disposition to order some. The lumber market in all lines is comparatively quiet, and no marked change is observed in prices or conditions. Leaf-tobacco dealers report a fairly steady market and an increased demand for standard grades of tobacco. Wholesale liquor dealers report good trade. Demand for whiskey is increasing. Beer and ale are not in demand as much as in warm weather, but brewers are satisfied with sales. Lower quotations for beef stimulate trade. Large receivers of apples look for a medium crop, with prices ruling high for good fruit. Dairy products continue to advance.

PROVIDENCE. — Business conditions in the jewelry manufacturing line remain about the same. Dealers in lumber and building material report a moderate trade. Machinery and tool manufacturers and the supply trade in this line report a firm market. Collections are slow.

PHILADELPHIA.—Wool prices continue firm as a rule; stocks are small and buying is moderate. Cotton yarns are sluggish, manufacturers not caring to place large orders because they hope to see prices lower. Dry-goods jobbers report a fair trade, but not as brisk as indicated earlier in the season, and collections continue slow. Retailers are preparing for fall and winter trade, but weather conditions have not been very favorable. Flour millers are holding prices very firm on account of the recent rise in wheat, but jobbers and bakers seem to be pretty well supplied and business is dull. Chemicals and dyestuffs continue in moderate demand at firm prices. Paints and glass are moving freely, and business is fully equal to last year. Oil is advancing and prices rule firm. Lumbermen report a slight falling off in orders, but the market is fairly satisfactory, though collections are slow. Prices are steady and firm on hardwoods, but on other grades are inclined to recede. Leather is without change, with a fair demand and steady prices. Hides and skins are steady and conditions seem to be improving, new skins being in demand. Boot and shoe dealers are doing a very fair volume of business, and prices hold steady. Manufacturers are doing well and express satisfaction at the volume of business. Tobacco is being bought in small lots for wants, though cigar manufactories are busy. Buyers are looking for lower prices, doubt their increasing any, and, as collections are poor and money dear, they see no advantage in buying to carry. Old goods are hard to find, and the new crop now being gathered is short 30 to 50 per cent. Liquor distillers will start late this fall and close earlier in the spring, cutting off two to three months of their season and reducing the production. The advanced price made necessary by increased cost of materials is expected to cause a falling off in sales. The change in iron is very slight. Prices are fairly well maintained, high prices of raw materials suggesting the improbability of their going much lower. Finished materials are less active. The demand for coal is good, and the output of anthracite is larger than it was for the corresponding period last year. Some delays are experienced in transportation, and prices are strong.

PITTSBURGH.—There is practically no change in the iron and steel situation. The pig-iron market continues featureless and stagnant, though Bessemer iron remains firm at present quotations. Ore shipments are about even with those of last year at this time, and it is believed will be close up to the estimate of 42,000,000 tons for the season. Aside from rails, finishing mills report a fair tonnage of new business, and active operations continue in most departments and probably average six to eight weeks behind orders. Many users of steel are buying from hand to mouth in anticipation of lower prices, thus increasing the number of orders, but decreasing the tonnage, their requirements being the same as heretofore. Leading steel manufacturers are not apprehensive as to the future and look for a continued good business, though somewhat reduced in volume. Coke is in good demand and moving freely, with prices firm. Quotations for pig iron at the valley furnaces for immediate delivery are as follows: Standard Bessemer, $22; chilled basic, $20.50 to $21; No. 2 foundry, $20.50, and gray forge, $20.50. Standard Connellsville furnace coke is quoted at $2.90 to $3, and foundry coke, $3.25 to $3.50, at the ovens. In general jobbing lines business is, in the main, satisfactory, and the volume is quite up to expectations.

BUFFALO.—Some lines report collections not so prompt as last week.

BALTIMORE. — Continued seasonable weather has aided the movement of retail stocks, and the volume of this business for October has been satisfactory. Jobbers of men's furnishings report an increased demand, with prices firm and a slight improvement in collections. Harness manufacturers are busy, but buyers restrict purchases, hoping for lower prices. A fair volume of new business is being obtained. An advance of about 5 per cent. is noted in book paper and some cheap grades, which somewhat affects buying, but business is fairly active with jobbers, while collections are slow. Woodenware, while showing an improvement in sales, shows no improvement in collections. Seasonable orders have been received by manufacturers of brushes. Shippers and miners report a strong demand for bituminous coal at good prices. Dry-goods and notion jobbers are obtaining a fair volume of business from filling-in orders. Quite an amount of advance orders for ginghams, which were increased in price, are noted, and jobbers do not expect to be able to fill all orders they receive, the capacity of the mills being overtaxed. Clothing manufacturers report a satisfactory spring order business, the tendency being to the better grades of goods. Shoe jobbers report an improvement in sales, prices firm and demand growing. A number of buyers have been on from Virginia and state counties, but have purchased in moderate quantities. Good business is reported by wholesale grocers in the past ten days, with collections about normal. Canned goods demand is strong and prices are advancing. An increase of 20 cents per barrel in flour is noted, with indications for a still higher market. Receipts of Maryland tobacco leaf are falling off and prices are firm. Seed leaf is becoming more active, and better prices are being obtained. Havana is scarce and high. Butter is very active and advancing, receipts not equaling demand. There continues a very strong demand for money, which is not equaled by the supply. Receipts from grain shipments at advanced prices, together with the movement of cotton and other crops and the taking up of a large amount of paper maturing between now and December 1, it is hoped, will be a source of material relief, though at present the market is very stringent in the money line. Jobbers in Baltimore who have been carrying considerable southern paper which begins to mature in October state that payments of same have been satisfactory, and in dry-goods and notion sources a slight improvement is noted in collections.

CLEVELAND.—Merchandise distributive trade is reasonably satisfactory. Hardware and clothing move at about the same rate as a year ago. Business in dry goods, millinery, cloaks and boots and shoes shows an increase. There appears to be no especial complaint regarding country collections. Merchants anticipate that satisfactory trade conditions will be maintained throughout the year. Receipts of iron ore continue large.

CINCINNATI. — Manufacturers, builders and contractors are busy. Skilled workers are scarce, and many factories are working overtime. In merchandise transactions are irregular. Groceries are active, but dry goods are inactive.

CHICAGO.—Business is fair, but collections are slower. The latter is attributed more to the stringency in money and the difficulty of borrowers to secure loans rather than to any decided let-up in trade. Dry-goods houses are moderately supplied with orders both for immediate and future delivery. Cotton goods are more easily procured, as mills are catching up with orders. Leather and shoes are held at full prices, with increased sales of the latter. Iron and steel show no general improvement in sales or specifications; in fact, new buying is lighter. The output of the Illinois Steel Company to date is 12 per cent. ahead of last year. Structural material is fairly sought after. The largest contract let was 10,000 tons by the Corn Products Company for their new plant at Summit, Ill. Orders for 20,000 tons of steel rails have been booked. Contracts for steel plates for two lake boats, aggregating 7,000 tons, have been placed. Billets are selling at reduced prices on a fair business. Stocks of pig iron are slightly larger, and new buying remains light and in small lots. Coal is selling freely, but cars are scarce. Yellow pine is coming into northern markets faster than last year, and prices on dimension are $5 to $8 under the list. Hardwoods and white pine are held firmly, with a fair trade. Butter is selling well, with the market easier. Eggs show little change. Patotoes are lower on increased receipts. All live stock is higher, with fair arrivals. Money is strong. The corn crop, based on the government condition, suggests a yield of 2,450,000,000 bushels, or 477,000,000 bushels less than the final returns last year. Iowa is short 106,000,000 bushels, and the seven surplus states, that raise nearly 60 per cent. of the country's crop, have 1,436,000,000 bushels, or 284,000,000 bushels less than last year. Huskings are disappointing. All late corn has been frosted. Claims of small crops for the three spring-wheat states have been confirmed, the three northwestern states having 147,000,000 bushels, or 28,000,000 bushels less than last year, and are 23,000,000 bushels short of milling and seed requirements. The loss is mainly in North Dakota. All sensational claims of crop losses in oats are confirmed, the reduction from last year being 223,000,000 bushels, the largest in any year known. Iowa and Illinois, the leading oat states, are short 68,000,000 bushels. The only state having more than last year is Pennsylvania. Hay is a larger crop than last year, and all will be wanted, as high prices for oats and barley are inducing closer marketing of them than usual, and farmers will feed more hay. A falling off in the interior movement of corn is reported, but it is above the average. Marketings of winter wheat are decreasing and of spring increasing, and oats show a fair reduction. Traffic over the railroads is heavy, and compares well with last year's.

PEORIA.—Jobbers and retailers report business satisfactory. Weather conditions are favorable and prospects are good. Collections are fair.

LOUISVILLE.—Business in all wholesale and manufacturing lines is fairly good. Dry-goods jobbers report a good business, fully equal to that of 1906. Whiskey distillers and wholesalers report their fall business coming in freely and say that Kentucky whiskey was never in greater demand. Hat jobbers report fall business about over, and their salesmen are starting out with new spring lines. Hardware, grocery and drug wholesalers report satisfactory business for the week. Collections continue slow.

ST. LOUIS.—House trade is very dull, but a good volume of filling-in orders is being received. Manufacturers of clothing are showing spring goods, and in this line several large orders have been booked at a slight advance in price. All large shoe factories are closed down indefinitely owing to the strike, but manufacturers say they are not inconvenienced very much, as they have a large stock on hand, and their sales and shipments continue to show a steady gain. What effect the strike will have on spring goods, if it continues much longer, is a question no one seems willing to discuss. Trade in groceries, drugs and provisions has been quiet, but during the past few days it is showing some improvement. Prices are firm, with an upward tendency. Lumber, hardware and all grades of building material show a decided falling off as compared with the same period in 1906. Manufacturers of stoves and castings are exceptionally busy. Trade in furniture, carpets and house furnishings, though not up to expectations, is of good volume, and prices are fair. Flour has increased 25 cents per barrel, and a further increase is looked for in the near future. Millers are sold up for several months. Export trade is the best in years, both as to quantity and price. Cool weather has stimulated retail trade, especially among clothing houses and department stores. Prospects indicate that fall and winter trade will exceed last year's. Collections in general are good, although in some sections where crops are late, some extensions have been asked. Money is firm at from 6½ to 7 per cent. on short-time

paper, and the demand is good. Winter-wheat seeding is well under way, and in some places the crop is up. Corn cutting has begun, and the crop is turning out fully up to expectations.

KANSAS CITY. — Trade in leading lines is unusually heavy, mostly filling current orders. The volume indicates a prosperous condition among country merchants. Collections are better than normal.

MILWAUKEE.—Jobbers report some improvement in volume of trade, but retail is quiet. Collections are fair and money is steady.

SIOUX CITY.—Trade is good in all lines, and the weather is excellent. Collections are good.

DAVENPORT.—Business is fair, in most cases equaling last year's. The weather is favorable to maturing corn. Collections range from fair to good.

ST. PAUL.—Business continues active in all lines, and last year's volume is greatly exceeded. Collections are coming in quite well, although thus far this month they are no better than they were last year. Grain is not moving very fast, and the coarse grains, owing to high prices, are being shipped in preference to wheat. The car receipts are falling off, and the country elevators are filling up rapidly. Car shortage and labor troubles are giving rise to anxiety and may prove serious. The outlook for continued increase in business is quite promising.

MINNEAPOLIS.—Trade in general continues very good for the season, but colder weather is needed to make things more lively. The crop movement is even more dilatory than last week, and collections are not improving. Higher prices for wheat make flour buyers cautious.

OMAHA.—General business is good in all lines, and jobbers report orders for future delivery in excess of last year. Money is high and in good demand. Collections are fairly good.

LINCOLN.—Wholesale trade is fair to good in all lines. Collections are fair and building continues active.

CHARLESTON.—Wholesale and retail dealers in all lines report business good. Cotton is bringing good prices and maturing obligations are being taken up promptly.

RICHMOND.—This week has been marked by a considerable increase in orders for immediate delivery from nearby territory, all distributing lines sharing in the business. Most of such purchases have been made by visiting buyers, who have been attracted to the city by the state fair. From distant territory orders for shoes, hats, clothing and kindred lines for spring delivery show some increase, and results so far assure a favorable season. Retailers have had a very satisfactory opening of the fall season, bracing weather and the presence of a large number of visitors having marked the beginning of the autumn. Hotels and boarding houses are crowded to full capacity, and the resulting trade to retail grocers and dealers in provisions has been quite a factor in the general quickening of activity in a number of lines. Collections continue to improve and requests for extra time are not so numerous as they were a year ago.

AUGUSTA.—Collections are fair. Cotton is in excellent condition.

ATLANTA.—Local trade is stimulated by four conventions and the opening of the state fair. The International Cotton Spinners' and Growers' convention recommend the uniform Egyptian style bale of 500 pounds. Prospects for a top crop of cotton are poor. There was a light frost on Wednesday. Wholesale dealers report good business, and collections are improving.

JACKSONVILLE. — Trade and collections reflect the low prices ruling for naval stores and lumber. The citrus fruit crop (oranges and grape fruit) is estimated at 3,000,000 boxes. The quality is excellent.

BIRMINGHAM. — Southern foundry No. 2 is quoted at $18.50 The weather is cooler, and business in general shows an increase. Lumber continues inactive and weaker in price. The cotton crop is short, and shipments are backward.

MOBILE.—Cooler weather has stimulated retail trade, likewise wholesale business. Jobbers report a decided increase in sales over last week. Weather conditions are favorable to the farmer, and cotton is being picked rapidly.

MONTGOMERY.—A slight improvement is noted in retail lines. Trade is reported good by jobbers and manufacturers, with the exception of lumber. Collections are improving. The condition of the cotton crop is about the same as last week.

MEMPHIS.—Wholesale business is good. Cool weather is stimulating retail sales. Collections are still slow. Cotton picking is general.

CHATTANOOGA.—Jobbers are doing a good business. Collections range from fair to good. Building is making substantial progress. Real estate is in demand.

KNOXVILLE.—Wholesale clothiers report a good volume of filling-in orders. Salesmen are entering the field with spring lines. Retail trade is improving. Collections are fair.

LITTLE ROCK.—Cooler weather has greatly benefited retail trade, and jobbers continue quite active. Cotton picking is progressing rapidly, and the grade is good. There is a strong inclination on the part of farmers to hold cotton, receipts to date being only about one-fourth as much as a year ago. The yield will be about 15 per cent. short.

NEW ORLEANS.—Retail trade is seasonably good. Jobbers are doing only a hand-to-mouth business. Collections are backward. The strike of laborers on the levee is interfering seriously with the cotton movement and is proving to be a severe strain upon cotton factors. Crops are good and conditions are satisfactory at the interior.

DALLAS.—Recent rains have proved beneficial and cooler weather has stimulated trade. Farmers as a rule are holding cotton and collections are slow.

WACO.—Jobbers report good business. Retail trade is quiet. Collections are slow. Recent rains in this section helped grass and seasoned the ground, which was very dry.

SAN FRANCISCO. — Business is quiet, with collections fair.

SEATTLE.—Trade, jobbing and retail, is very satisfactory. Collections are fair.

SPOKANE.—General trade is good in all lines. Real estate continues active. Washington apples are being shipped to eastern markets in large quantities. Collections are fair.

TACOMA. — Grocery, provision and hardware lines are active. Lumber is quiet, owing largely to lack of railroad rolling stock. Building shows a steady increase. Collections are fair.

PORTLAND.—Demand for staples in all lines prevents the accumulation of surplus stock in jobbers' hands. Collections continue good. Building is active both in business and residence properties.

TORONTO.—Business in staple wholesale lines is quite satisfactory. The sorting trade in fall goods is brisk, and fairly heavy shipments of winter lines are going forward. Cool weather has given quite an impetus to buying of fall dry goods. In some lines business has not been quite up to the standard of last year, although it is stated the business of the entire year to date was considerably greater than that of the corresponding nine months of 1906. Values of all lines are firm. Further advances are noted in woolen goods. Canadian cotton mills are still booked up six months ahead. A good hardware trade is moving. Stocks for fall and winter use are going out in fairly large shipments. Large deliveries of all kinds of goods are being made by lake freights. These deliveries will continue heavy until the close of navigation. Hides are firm. Leather is quiet. Collections from all parts of the country are about as reported last week. From the west they are still noticeably slow. Country trade has been a little quiet.

MONTREAL.—General trade is steady. Wholesale and retail goods are moving well. There has been but little change in money market conditions, and banks are still exercising considerable caution in the matter of loans. Conditions in this respect are not as stringent as they were a month ago, but there is little hope of any marked relief until well on to the end of the year. Wholesale dry-goods men report that buying of winter goods has been active. Retailers have been cautious and have not taken on large stocks. On this account expectations favor a good sorting trade. The prevalence of high prices has also acted against buying. Woolen, silk and linen goods are exceedingly firm. In hardware there is an excellent movement in sporting lines, and builders' hardware continues fairly active. Grocers report a good business from all parts of the country. The sorting trade in boots and shoes is fair. Leather is quiet, with a moderate demand. Hides are easy. Exports of dairy products are still light. Those of grain and flour show a considerable increase over last year. Country trade has in most directions a quiet tone.

VANCOUVER-VICTORIA.—Trade here is affected by two disturbing factors—the tightness of money and labor scarcity. The latter is responsible for some delay in the carrying out of intended railway extension and in the general industrial work of the province. Wholesale and retail trade continues fairly active. The country demand for goods is brisk and collections are generally fair. A big business is being done by the transpacific and the coast shipping companies. There is some complaint about the slowness in deliveries of some lines of dry goods.

WINNIPEG.—A fairly steady trade is doing here in all lines. A good wholesale trade is moving, and general satisfaction is expressed regarding the business outlook. Latest reports from the country confirm what has been said about partial crop damage, and although the quantity of ungraded wheat is likely to be large, threshing returns from some districts show a very excellent quality of grain. Country trade is fair, but collections continue slow. The difficulty which business men generally have in the obtaining of credit is affecting business in all directions.

FINANCIAL.

Money Market.

Decided conservatism has been exhibited by lenders in the New York money market. The outflow to the interior continues, but the banks, it is estimated, gained a little on balance for the week. The money market, moreover, was influenced by the strength in foreign exchange, growing out of the unwillingness of European bankers to renew maturing loans, and to the repayment of borrowings at Paris based on New York City revenue bonds. Shipments of gold to the French capital, in fact, seemed highly probable, in view of the reported willingness of the Bank of France to allow interest on gold in transit, but it was stated that this decision had been promptly withdrawn. Moreover, it was intimated that the Secretary of the Treasury has expressed a willingness to increase the government deposits still further, which had some effect on the tone of the money market at the end of the week. The principal feature continued to be the large demand for three-month loans—in other words, for money over the first of the year—and for this specie of accommodation 6½ per cent. was willingly paid, more particularly where the collateral included a large proportion of industrials. In fact, in some cases lenders were reported as standing out for 7 per cent. Long-time loans were quoted at 6 per cent., but there was very little demand for that kind of accommodation. While call money touched 6 per cent., the renewals were generally made at around 5½ per cent., falling to 4¾ per cent. on Friday. Commercial paper was decidedly inactive, the only rate mentioned being 7 per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending October 10 shows an aggregate of $2,721,039,000, as against $2,901,268,000 last week and $3,107,729,000 in the corresponding week last year. Canadian clearings for the week aggregate $84,784,000, as against $83,220,000 last week and $86,167,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	October 10	*Inc.*	*Dec.*	*October 3*

New York Banks.

Last Saturday's New York Clearing House statement showed a loss of $7,621,100 in the cash averages of the associated banks, an amount about $2,000,000 more than the highest estimates of the actual decrease. This result was attributed to carrying over some part of the preceding week's loss in the averages. The loans, however, showed a reduction of $11,283,100 in the averages, which was doubtless due to stock-market liquidation and the transfer of borrowings to other institutions than the banks. The decrease of $18,490,400 in deposits agreed closely with the above changes, and the reserve required was diminished by only $4,622,600, so that the loss in the surplus reserve for the week was $2,998,500, bringing, however, the aggregate surplus down to $2,648,675. The figures of the statement compare as follows with those of the preceding week:

	Oct. 5	*Sept.* 28	*Changes*
Loans	$1,089,068,400	$1,100,351,500	D. $11,283,100
Specie	192,216,700	198,807,900	D. 6,591,200
Legal tenders	69,607,200	70,637,100	D. 1,029,900
Deposits	*1,036,703,300	1,055,193,700	D. 18,490,400
Circulation	50,657,800	50,638,500	I. 19,300
Total reserve	261,823,900	269,445,000	D. 7,621,100
Reserve required	259,175,825	263,798,425	D. 4,622,600
Surplus reserve	2,648,075	5,646,575	D. 2,998,500

The following shows the relation between the respective dates:

	Oct. 5, 1907	*Oct.* 6, 1906	*Oct.* 7, 1905
Loans	$1,089,068,400	$1,052,331,200	$1,059,740,900

Foreign Exchange.

The feature of the exchange market at New York during the past week was the appearance of a large and urgent demand for remittances. At the same time offerings of commercial bills, especially against cotton shipments, were restricted, though toward the close of the week the supply seemed to improve slightly. This, however, was insufficient to change the tendency of the market, in the face of the decided disposition of the foreign markets to enforce the repayment of maturing loans which had been made to Wall street by London and Paris three months ago. A circumstance which also influenced the market was that loans amounting to a large sum, based on New York City revenue bonds, and which had been placed in Paris, have come due and are being paid off. Under the circumstances the rate for demand sterling advanced to 4.86 or slightly higher, and posted rates for demand were marked up to 4 87. Francs were particularly strong, going to as high as 5.16¼ plus 1-16 for cables. It was announced on last Wednesday that the Bank of France had decided to allow interest on gold in transit from New York to Paris, and this led to rather confident anticipations that specie exports would set in. The bank, however, was stated to have withdrawn this offer on the following day, but the situation with respect to possible gold exports is still uncertain, not to say dangerous. On Friday the exchange market was again strong, with an advance in the demand sterling rate to 4 86.20.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Oct. 5	*Oct.* 7	*Oct.* 8	*Oct.* 9	*Oct.* 10	*Oct.* 11
4.83 @ 4.86½	4.83 @ 4.86½	4.83 @ 4.86½	4.83 @ 4.87	4.83 @ 4.87	4.83 @ 4.87

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.90 @ 4.86.00	4.85.70 @ 4.85.95	4.85.90 @ 4.85.95	4.85.75 @ 4.86.05	4.85.90 @ 4.86.05	4.86 @ 4.86.20

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.25 @ 4.82.45	4.82.20 @ 4.82.45	4.82.30 @ 4.82.35	4.82.25 @ 4.82.40	4.82.25 @ 4.82.50	4.82.30 @ 4.82.35

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.80; commercial bills, 4.80⅝@4.82½; francs, 5.20 less 1-16@5.16⅞; reichsmarks, 94 1-16@94⅞ plus 1-32.

The Bank of England's discount rate is unchanged at 4½ per cent. Its weekly return on Thursday showed a loss of £1,855,473 in gold, and its proportion of reserve to liability was 46.51 per cent., against 48.86 per cent. last week. There was also an apparent decrease of £1,163,000 in the loans by the bank to the market. The quotations for call money in the London open market are 2¼@2¾ per cent., and discount is firmer at 4 1-16@4¼ per cent. The Bank of France reported for the week a loss of 2,500,000 francs in gold. Its rate of discount remains at 3½ per cent., the Paris market quotation being also 3½ per cent. At Berlin the bank rate is unchanged at 5½ per cent., while the market quotation is 4⅝ per cent.

New York Securities Market.

Increased activity in the dealings at the New York Stock Exchange have again been attended by further and rather general declines in the range of prices for stocks. There was also not a little real liquidation, the most important of which represented selling by foreign interests. The general belief in that connection was that Amsterdam holders of American securities were reducing their lines in view of unfavorable monetary conditions abroad and the feeling of distrust toward American corporations, which has been engendered by current revelations as to the methods of certain managements. There was not a little activity on the part of the bears, and the short interest became so far extended that on Thursday, after touching new low record prices in the early trading, the market enjoyed a fair rally. On Friday the market showed further decided irregularity, heavy selling of speculative stocks resulting in additional declines throughout the list.

Money market conditions this week assumed renewed importance as a bearish factor in the stock market. A very poor bank statement on last Saturday was followed by a continuance, when the present week opened, of considerable demands for funds by the southern and western banks. At the same time the conservatism of the New York institutions was increased by the action of the foreign exchange market, which assumed a tone of great strength. Foreign financial interests show a decided inclination to draw in the credits heretofore extended to the New York market, while, as it is explained elsewhere, the maturity of some large loans effected in Paris, and based upon New York City revenue bonds, supplies an additional complication. The sharp rise in exchange brought that market within sight of gold exports, and it was intimated on Wednesday that the Bank of France had decided to allow interest on gold in transit. Thursday, however, brought the announcement that this policy had been abandoned, probably in view of the disturbance which a forced gold outflow from this country would be apt to create at this juncture. Furthermore, statements were circulated that Secretary Cortelyou would authorize an additional increase in the government deposits. Nevertheless, the narrow conditions under which the money market labors were displayed by the firmness of, and the large inquiry for, three and four months' loans, for which 6½ per cent. has been paid during the week.

In the early transactions the so-called Hill stocks occupied a leading position. The unexpected announcement on Monday of an extra dividend of 1½ per cent. on Great Northern raised strong hopes that the long-expected melon would be forthcoming in the case of Northern Pacific. The directors of that company, however, met on Tuesday, with no greater result than the declaration of the regular dividend, and the disappointment thus created caused a decided decline. The additional reduction announced this week in the price of copper was another adverse influence, depressing Amalgamated and American Smelting, as well as in the general run of copper stocks. At the same time the revelations of the peculiar financial methods of the heads of the Metropolitan Street Railway created a most unfavorable impression, and were cited widely as a tangible reason for the distrust which prevails among investors at large. The very favorable annual reports presented by such companies as the Union Pacific and Atchison, covering the year which ended June 30, failed to have any effect on the market, Union Pacific and the other Harriman stocks selling off with the rest of the list. There was further pressure on the United States Steel shares, coupled with reiterated statements that the company's orders were diminishing. Southern Railway was again the object of selling, and made another low record for the year. In fact, one of the features of the week has been the unsteadiness of a large variety of the lower-priced shares, both railroad and industrial, including issues so widely separated as Wabash, Pressed Steel Car, General Electric, Missouri, Kansas & Texas, New York Air Brake and a large number of issues.

Annual Reports.

The Chicago, Rock Island & Pacific Railway Company has issued its full pamphlet report for the year ended June 30, 1907. The income account of the entire Rock Island system compares as follows:

	1907	1906	1905
Average mileage	7,780	7,218	7,232
Gross	$60,238,420	$51,237,858	$44,051,509
Expenses	41,044,142	35,067,058	31,058,209
Net	19,194,278	16,170,800	12,993,300
Other income	745,181	1,015,837	1,526,172
Total income	19,939,459	17,186,637	14,519,472
Charges and taxes	11,188,942	10,400,804	9,786,362
Surplus	*8,750,517	6,785,833	4,733,110
Dividends	4,116,728	4,677,552	4,676,622
Surplus	4,633,789	2,108,281	56,488
Special improvements and equipment	....	2,108,281	....
Surplus	4,633,789	....	56,488

* The surplus $8,750,517 for dividends is equal to 11.66 per cent. earned on the $75,000,000 capital stock.

The Western Union Telegraph Company has issued its full pamphlet report for the year ended June 30, 1907. The income account compares as follows:

	1907	1906	1905
Gross revenue	$32,856,406	$30,675,654	$29,033,635
Operating expenses	26,532,196	23,605,072	21,845,570
Net revenue	6,324,210	7,070,582	7,188,065
Interest on bonds	1,420,061	1,327,975	1,227,200
Net profit	4,904,149	5,742,607	5,960,865
Dividends	4,858,096	4,868,089	4,868,084
Surplus	36,053	874,518	1,092,781
Previous surplus	16,848,728	15,974,209	14,881,429
Total surplus	16,884,781	16,848,727	15,974,210

* Equal to 5.03 per cent. on the $97,370,000 capital stock outstanding.

Western Union's expenses in detail for the past three years compare as follows:

	1907	1906	1905
General exps. and taxes	$19,257,622	$17,191,039	$16,165,199
Rent of leased lines	1,545,571	1,553,288	1,591,373
Main. and reconstruction	5,278,203	4,422,960	3,719,334
Equip. of offices and wire	450,710	437,784	369,664
Total	26,532,196	23,605,071	21,845,570

The Northern Pacific Railway Company has issued its report for the year ended June 30, 1907. The income account compares as follows:

	1907	1906	1905
Gross	$68,534,832	$61,223,476	$50,722,886
Expenses	37,664,317	31,095,432	26,808,759
Net	30,870,515	30,128,044	23,914,129
Taxes	2,398,719	2,213,040	1,601,000
Net	28,471,796	27,915,004	22,313,127
Other income	2,338,324	1,719,346	1,921,567
Total income	30,810,120	29,634,350	24,234,694
Interest and rents	7,336,191	7,146,609	7,108,453
Surplus	*23,473,929	22,487,741	17,126,241
Dividends	10,850,000	10,850,000	10,850,000
Balance	12,623,929	11,637,741	6,276,241
Appropriation for depreciation of equipment	5,926,753	2,000,000	....
Balance	6,697,176	9,637,741	6,276,241
Appropriation for insurance fund	....	1,081,980	....
Surplus	6,697,176	8,555,761	6,276,241
Additions and betterments	....	3,000,000	3,000,000
Net surplus	6,697,176	5,555,761	3,276,241

* Equal to 15.14 per cent. earned on the $155,000,000 stock outstanding. After charging off $5,926,753 appropriated for depreciation of equipment, the balance for the stock would equal 11.32 per cent.

The Great Northern Railway Company reports for the fiscal year ended June 30 last, with comparisons:

All others	....	672	21,483
Total	3,305,753	494,738	369,812

Exports of oats amounted to 71,896 bushels, of barley to 24,380 bushels, and of rye to 35,000 bushels.

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with October 5 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
October 5, 1907	307,808	6,042,442	6,222,927	5,267,940
Sept. 28, 1907	326,564	6,684,791	7,032,202	5,881,940
October 6, 1906	594,189	8,660,839	3,692,886	4,974,430
October 7, 1905	615,431	9,239,672	3,007,413	6,965,668
October 8, 1904	503,993	7,869,513	1,879,513	4,941,403
Season				
July 1 to October 5, 1907	4,512,712	71,165,113	53,362,840	57,800,906
July 1 to October 6, 1906	6,080,595	82,676,443	48,400,501	61,464,368
July 1 to October 7, 1905	5,475,124	81,414,060	50,248,045	68,082,733
July 1 to October 8, 1904	4,915,795	73,379,543	42,974,707	61,509,568

Total	3,788,000	3,434,000	4,092,000

Wool Markets.

While sales in the aggregate have not been so large as the previous week's, the market has been active and firm. The situation has been further strengthened by the firm closing of the London sales and the firmer opening of the Melbourne market, purchases made recently appearing to be good values at present. The London sales closed October 4, with merinos and fine crossbreds up 1d. from the opening, low crossbreds being fully maintained. American buyers took very little wool. The Melbourne sales opened October 7, with prices 10@12½ per cent. higher, advancing ½d. since, little wool suitable for this country having been offered yet. The Geelong sales will open October 24. Staple wools are well cleaned up, but the bulk of the clothing wools have yet to be moved. Territories are the most active, but there is a fair trade in other lines, and a better demand is reported for quarter bloods. Montana wools in the original bags sold during the week at 26@26½ cents for fine staple and half blood, 27 cents for half blood and 27½ cents for three-eighths blood. Idaho and Utah medium, three-eighths and half blood, sold at 26@26½ cents, Idaho fine clothing at 22 cents and Utah fine medium at 22½ cents. Fleeces are very firm, with small offerings of desirable grades. Delaine fleeces are sold up, recent sales being of washed at 38½ cents and unwashed at 31 cents. There is an excellent demand for Ohio half bloods, with sales at 33@34 cents. Three-eighths blood Ohio sold at 33@33½ cents, with Michigan at 32½ cents. Quarter blood Ohio brought 31 cents and Michigan quarter bloods 30 cents. XX and above Ohio changed hands at 34@35 cents, fine unwashed at 27 cents and unmerchantable at 29 cents. Eastern Oregon wools are cleaned up, with sales at 24 cents recently, Valley No. 1 and No. 3 selling at 25@26 cents, with No. 2 at 27@28 cents. California wools are very quiet, nothing having as yet been done outside of sample bags. Texas wools are out of stock. Pulled wools are quiet, B supers selling at 43@45 cents in a small way. Foreign wools are still quiet, owing to the scarcity of merinos and fine crossbreds.

Boston Shoe and Leather Market.

Leather dealers report business still quiet. So great has been the curtailment of product among tanners of sole leather that receipts are said to be hardly equal to shipments. Tanners of satin and kangaroo grain leathers have also curtailed, and makers of patent leathers are very cautious, practically confining the present volume of business to correspond with orders actually booked. Standard lines of leather are, therefore, all considered in strong position, and prices are held firmly. Glazed kid is weak, and large stocks of goods as well as imperfect leather have accumulated. There is some inquiry for colors in kid, sheepskins, etc., and a good trade in such lines is anticipated. Patent leathers are quiet, but it is yet too early to determine whether the public has actually tired of them. Shoe manufacturers are not yet cutting very extensively on spring goods, although the fall season is nearly over for a majority of them. Some are still receiving good orders and calls for immediate shipment. The status of the retailer is somewhat in doubt. One salesman will report that dealers in his district are carrying over large lines of oxfords and will require less goods than normal to open for spring trade, while another will report that his territory is in the opposite condition, that stocks are small and that dealers will require a normal amount of new goods. As a rule, manufacturers are looking for a good volume of business on the next run, particularly as buying has been conservative for a year past. Shipments are running light for the season. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 91,252 cases; preceding week, 90,571; last year, 108,723; total for 1907, 3,758,596; total for 1906, 3,951,498; decrease, 192,902.

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

SATURDAY, OCTOBER 19, 1907.

One of the most noteworthy events of a time fruitful in remarkable applications of science to the ordinary purposes of men was the inauguration on Thursday of this week of wireless communication across the Atlantic for commercial and press purposes, the realization of years of dreaming and working on the part of the great Italian inventor, Marconi. The stations between which the communication was established are Glace Bay, Nova Scotia, and Clifden, in Ireland. The transmission of dispatches was carried on apparently without any hitch, and during the day ten thousand words were sent. The messages transmitted included a number of congratulatory dispatches from prominent statesmen, scientists and others of public note. The inventor himself is quoted as being thoroughly satisfied with the success of the transatlantic wireless system; not a single word, he said, had to be repeated. For a time the work of transmission will be confined to press messages, but about the end of next week, it is expected, the Marconi Company will be prepared to handle private or commercial messages.

As has been intimated, this great achievement has not been brought to its present stage of completion without long thought and labor. It is now nearly six years since, as was recorded in these columns at the time, Marconi sent the first clear and intelligible signals across the Atlantic from Poldhu, in Cornwall, to a temporary station near St. Johns, in Newfoundland. That was in December, 1901. Earlier in the same year, namely, in January, he had as an experiment established wireless communication between St. Catherine's, on the Isle of Wight, and The Lizard, in Cornwall, a distance of 183 miles. This experiment again was simply one of the steps in the demonstration of the inventor's conviction, announced nearly five years before, that he had discovered the secret by which messages might be sent through space without the assistance of wire or cables. In the course of the last six years many applications of the method over short distances have been successfully made, but it is not until the present that it has been possible to chronicle the completion of arrangements by which the steady and regular transmission of wireless messages between the continents has been secured—a circumstance upon which the distinguished inventor no less than the world he has served may fittingly be felicitated.

Only the ceremonials of signing and leave-taking occupied the delegates to the Peace Conference at their session of yesterday. Three of the United States delegates signed the final act and the conventions adopted, and the others will sign to-morrow, with the exception of General Davis, who has returned to the United States. Addresses were made by President Nelidoff, by Dr. Van Goudrian and M. de Beaufort in behalf, respectively, of the government and of the delegates of the Netherlands, and by Sir Edward Fry, as dean of the delegates. With the approval of the conference M. Nelidoff sent to President Roosevelt a message presenting the respectful homage of the delegates on the conclusion of the work of the gathering, whose convocation was first suggested by him.

Postmaster-General Meyer made the annual meeting of the Postmasters' Association of New England the occasion for outlining some of the recommendations for the improvement of the postal service which he will submit to Congress at the forthcoming session. His suggestions will embrace such propositions as the further development of the parcels post system, the establishment of postal savings banks, the issuance of postal notes in denominations ranging from 1 cent to $2.50, and the installation throughout the country of automatic stamp-vending machines. The recommendations as to these machines will, however, depend upon the success of experiments with devices of the kind now being conducted by the department officials. Touching the parcels post, it is the intention of Mr. Meyer to urge that the maximum rate for all parcels be reduced from 16 cents to 12 cents a pound; that the limit of weight for parcels be increased from four to eleven pounds; that local parcels posts equipped with wagons or automobiles be established in cities where the free delivery system prevails, and that a special parcels post system with an extremely low charge for service be established in connection with the rural free delivery. The report of the Postmaster-General will be among the most interesting official documents of the year.

A decision of much interest to those engaged in the manufacture and sale of medicinal preparations in which alcohol is an ingredient has just been rendered by Commissioner of Internal Revenue Capers. That official holds that a special tax is required for the manufacture and sale of alleged medicinal alcoholic compounds, or for the sale of malt extracts manufactured from fermented liquors, in cases where the drugs used in the manufacture are not sufficient in amount or character to render the product unfit for use as a beverage, or in the case of cordials, extracts and essences in which the amount of alcohol is greater than is necessary to preserve the ingredients, or to extract the properties, or cut the oils and hold the same in solution. The Commissioner adds that manufacturers of alcoholic medicinal compounds, malt extracts, flavoring extracts, essences and soda-water syrups who wish to avoid liability for special taxes must satisfy themselves that their products are within the limits defined, and that those who put out alcoholic compounds of doubtful medicinal value or containing a questionable excess of alcohol must do so at the risk of being required to pay special taxes for the manufacture and sale of the same.

In common with other metals, silver has experienced a severe decline. In fact, the quotation in London, which market governs its course, has fallen within the past week to 27 11-16d. per ounce. This compares with 30½d., the high price for this year, which was made last spring, and with 33⅛d. quoted in November last year, the latter being the highest figure touched since as far back as 1893. The New York market price has exhibited a similar shrinkage this week, having seen sales at 60 cents, compared with 70⅛ cents earlier in the year and 71¾ cents in November last. Sympathy with the other metal markets might be deemed to have some part in causing the reaction in silver. It seems, however, that the way the metal has behaved is independent of the causes which are responsible for the drops in copper, lead and tin. The preceding sharp rise from 21 11-16d. in 1903 to 33⅛d. last autumn was the result of heavy purchases by Oriental countries, as well as by demands for the coinage of subsidiary silver coin by various European nations, while the fact that the United States government also resumed the purchase of silver for the same purpose was not without considerable effect. At the present time the silver market is confronted not only with an increased supply from the mines of this and other countries, but with a reversal of the action of various governments which, as before stated, had been purchasing for subsidiary coinage, although this week brings the announcement that the United States Treasury has bought 200,000 ounces, being the first purchase from this quarter for some time.

Officials of various railroad companies continue to offer explanations in regard to the so-called shortage of cars, which in many sections is the chief subject of complaint on the part of shippers of freight, being, in fact, much more troublesome to business interests than excessive rates. The heads of the operating department of the New York Central, for instance, come forward with some statements in this connection which are highly interesting. It seems that in the case of the Vanderbilt lines east of Buffalo, the action of shippers and consignees is at the root of the difficulty which the company finds in supplying cars as promptly or in such numbers as are wanted. According to this, the charge of $1 per day for the detention of cars is no deterrent to their being held and used as warehouses until the contents thereof are disposed of. In order to meet this difficulty, it is understood that the New York Central officials have decided upon a much more severe scale of charges for demurrage, which is to become effective at the beginning of next month.

Uncertainty as to the Amalgamated Copper Company's dividend policy continued up to the very end of the stock market session on Thursday last, when the announcement, however, was forthcoming that instead of paying 2 per cent. quarterly, as was done three months ago, the rate had been reduced to 1 per cent., thus placing the stock upon a 4 per cent. annual basis. This involved no element of surprise, the sole question having been how great the reduction would be at this time, some stock market interests holding that instead of cutting the rate in half it would be the object of a gradual reduction, and that the stock would, in the first instance, be put on a 5 or 6 per cent. basis. The further decline in the price of copper, which has been one of the features of the week, and which has carried the quotation for the metal to around 13 cents per pound, together with the fall in the market value of Amalgamated shares, were a clear notification that the placing of the dividends on a lower basis was likely. According to all accounts, the representatives of the Amalgamated in the copper market have been unable to market any large amount of the accumulated stock of the metal even at the reduced prices quoted, so that hopeful elements in the situation regarding the other copper stocks have still to be looked for.

CONCLUDING DAYS OF THE HAGUE CONFERENCE.

After a considerable amount of backing and filling, the arbitration committee of The Hague Conference adopted on Friday last a declaration which may probably be regarded as the ultimate word of the Peace Conference upon the subject of obligatory arbitration. This declaration favors the principle of obligatory arbitration, and sets forth that certain differences, especially those regarding the interpretation and application of conventional clauses, are susceptible of being submitted to obligatory arbitration without restriction. Continuing, the declaration proclaims that while a convention on the subject was not concluded, the circumstance that all the states of the world had worked together for four months led them to know each other better by getting closer together, and developed during this long collaboration high ideals for the common welfare.

This declaration was adopted by the vote of all the delegations except those of the United States, Japan, Hayti and Turkey. It drew from Mr. Choate a speech in explanation of the course of his colleagues. In this speech the veteran advocate declared that nothing had shaken his belief that an international bureau to act as chancellery of the Court of Arbitration of 1899 should be instituted as soon as nine powers should adhere to the proposal, in order that the project of obligatory arbitration should take a more concrete form than was given it by the resolution adopted by the committee. Mr. Choate added that while the immediate results of the present conference were distinctly limited, he hoped that each successive conference would make the position reached at the preceding one its point of departure, so that by successive steps results would be ultimately obtained that in the beginning had appeared quite impossible. At its ninth plenary session, held on Wednesday, the conference adopted, though with some reserves, the declaration regarding obligatory arbitration. David J. Hill, speaking for the United States, said that his country would not depart from its traditional policy of non-interference in the affairs of other states.

Some other important matters were dealt with at the plenary session. One of these was the long discussed project for the establishment of an international high court of justice. Some difficulty was occasioned by the suppression in article one of the instrument dealing with the matter of words setting forth that the court should be "based on the juridical equality of the states." The Latin-American delegates took the view that this change altered the fundamental basis of the whole project. Mr. James Brown Scott, of the United States delegation, explained that the words had been inserted by mistake in the report submitted to the committee on arbitration, and that the mistake, which he regretted, could not change the situation, as all the provisions regarding the allotment of judges and the constitution of the court having been suppressed, the governments were left free in their decisions on the subject. Thirty-eight votes were recorded in favor of the plan. Six states abstained from voting, namely, Belgium, Denmark, Greece, Roumania, Switzerland and Uruguay. In spite of the explanation of Mr. Scott, Mexico and Brazil, while voting in favor of the project, declared that their votes were given with the understanding that the future negotiations among the governments regarding the election of the judges and the organization of the court must be based upon the principle of the juridical equality of the states. Substantially the same reserve was recorded by a number of the other states.

Another subject of interest was the proposal of General Horace Porter regarding the collection of contractual debts. This proposal, to which reference has been made a number of times in these columns, was approved by thirty-nine votes. Five abstentions from voting were recorded, namely, those of Belgium, Sweden, Roumania, Switzerland and Venezuela, while twelve American governments made reservations. It is generally accepted that the importance of the proposal lies more in the principle which it establishes than in its practical application, which may seldom occur. On motion of Baron d'Estournelles de Constant, all the countries represented at the conference voted to contribute materials and works of art to the Palace of Peace. At the tenth plenary session of the conference, held on Thursday, the final act was adopted, recognition being given in it of the action of President Roosevelt, Emperor Nicholas and Queen Wilhelmina in promoting the work of the conference.

So far the conference has agreed upon thirteen conventions dealing with the peaceful settlement of international conflicts—an international prize court, the regulation of the rights and duties of neutrals on land and at sea, the laying of submarine mines, the bombardment of towns from the sea, the collection of contractual debts, the transformation of merchantmen into warships, the treatment of captured crews, the inviolability of fishing boats and of the postal service, the applications of the Geneva convention and the Red Cross to sea warfare, and laws and customs regulating land warfare. Declarations or resolutions have been adopted prohibiting the use of balloons for the throwing of explosives, favoring obligatory arbitration, advocating the establishment of a high court of justice, concerning the limitation of armaments, regarding the convocation of the third conference, prohibiting the use of unnecessarily cruel bullets in warfare, and touching the cöoperation of all countries in the building of the Palace of Peace. The work actually accomplished does not loom large at present. Perhaps some of the work done which has not found formal expression may yield large results in the future.

A MODERATE INCREASE IN RAILWAY GROSS EARNINGS.

Nowadays early preliminary returns of railway gross earnings are not the excellent guides to the trend of earnings they were some few years ago. As a matter of fact, many of the leading roads now prefer to wait until they are in a position to make conclusive returns as regards both gross and net receipts. Therefore our statement of approximate gross earnings for September is not so complete as preceding similar monthly returns have been. However, the data that have become available show that the gross earnings of roads operating about 78,000 miles amounted in September last to $52,010,396, the gain over the like month in 1906 being $3,896,304, or 8 per cent.

It is true that this ratio of increase is smaller than those reported in either April, May, June, July or August of this year, but it nevertheless caps increases that have been making in every September for a number of years past. Thus the present gain, 8 per cent., compares with 9.3 per cent. in September, 1906, 6.3 per cent. in that month in 1905, 4 per cent. in 1904, 7.9 per cent. in 1903, 9.6 per cent. in 1902 and 10.5 per cent. in 1901. Last month traffic was very heavy, and some car shortages were reported, especially in agricultural, coal-mining and lumbering sections. Shipments of coal, general merchandise and manufactured products were large, but the movement of cereals, while exceptionally heavy as regards some markets, was, on the whole, somewhat below last year's at the same time. This latter feature is a reflection of the backwardness of crops and also of the disposition of the farmer to hold his products for higher prices, notwithstanding that quotations have been and are very high.

A short statistical history of railway gross earnings is given in the following table, which shows the monthly trend of receipts back to 1901:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	15.1	14.7	9.5	3.5	12.0	9.0	9.2
June	13.4	13.3	6.3	.6	14.1	8.1	6.8
July	11.4	14.1	7.4	1.4	12.3	7.5	13.3
August	9.1	13.1	5.1	*3.4	9.4	4.6	13.2
September	8.0	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11 2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	6.9	*1.4	11.5	8.0	10.5

*Increase. †Decrease.

Whether an increase of 8 per cent. in gross receipts will permit of much being carried over to net earnings is a question that can hardly be answered for a month at least. Full returns for August show that while gross earnings advanced quite heavily, the increase in net revenue was only 1.4 per cent.

This table gives all the leading increases in gross earnings for September this year as compared with the same month in 1906:

Great Northern	$675,452
Missouri Pacific system	538,000
Southern	430,115
Louisville & Nashville	360,379
Canadian Pacific	260,000
Illinois Central	254,007
Denver & Rio Grande	251,000
Colorado & Southern	149,004
Canada Northern	133,900
Texas Pacific	94,756
St. Louis Southwestern	94,380
Western Maryland	90,429
Cincinnati Northern	89,084
Wabash	84,367
Central of Georgia	78,870
Midland Valley	70,161
Cincinnati, New Orleans & Texas Pacific	68,606
Mobile & Ohio	59,943

Some of the increases are very heavy. Thus the Great Northern system shows an advance of $675,452, the Missouri Pacific one of $538,000, while the Southern Railway returns one of $430,000. The Louisville shows a gain of $360,379, the Canadian Pacific $260,000, the Illinois Central $254,000, and the Denver & Rio Grande $251,000.

THE FILIPINO NATIONAL ASSEMBLY OPENED.

Our able and energetic Secretary of War reached Manila from Hong-Kong on Tuesday and was received with many demonstrations of respect and good will, which are reported to have touched him deeply. One of the main purposes of his visit was not deferred longer than the following day—Wednesday—when he opened the first National Assembly of the Filipinos. The theater in which the Assembly was convened was crowded with representative members of both peoples, as well as with foreign consuls and provincial delegations. The Secretary was hailed as the "Father of the Filipinos" by Governor-General Smith, who invited him to open the Assembly. This he did with the statement that, by the authority of the President, he declared the Assembly open for the transaction of business. Mr. Taft's address occupied three hours in delivery, this including the time required for its translation into Spanish.

Out of a total of eighty delegates seventy-nine answered to the roll call. After the conclusion of a recess following the Secretary's speech, the Assembly appointed a temporary chairman in approved fashion and then proceeded to the election of a speaker, who was chosen in the person of Señor Osmena, ex-governor of Cebu. Rules of procedure were adopted substantially similar with those governing the House of Representatives at Washington. As might be expected, some lack of acquaintance with parliamentary forms was disclosed, some matters of seemingly minor consequence arousing heated discussions in which a considerable number of speakers participated. The election of a secretary enlisted the active discussion of no fewer than twenty-seven orators. It was noticed that administrative officials gave the proceedings a wide berth, doubtless with the view of leaving the delegates untrammeled in their action.

In his address Secretary Taft presented to the delegates an encouraging view of the immediate outlook for the islands from an economic and social view point. Noting that the islands are now tranquil, he said that general education spreads satisfactorily, there being now half a million school children in the Philippines. The need for sanitation is being taught by the health departments, cattle are being protected, and a serious recurrence of pests is impossible. The judiciary has been firmly established, public improvements are progressing satisfactorily, and railroad construction is advancing rapidly in the three main islands. Exports are increasing, the condition of the finances and of the currency is satisfactory, business is reviving, the employment of foreign capital is gradually increasing, and the greatest requirement now to insure material improvement is the continuance of conservatism in the government. As an influence in the latter direction, apparently, the Secretary advocated permanent tenure of office and pensions. One of the most significant statements made by the Secretary was to the effect that those crediting reports as to the sale of the islands misunderstand the motives of the American people.

FOREIGN TRADE FOR SEPTEMBER AND NINE MONTHS.

The really new and therefore notable feature of the foreign trade returns for September was the sharp falling off shown in the import trade for that month as compared with the preceding month of August, imports of merchandise being, in fact, the smallest for any month since September, 1906. Exports gained only slightly over those of August, and were

slightly smaller than those of September, 1906 or 1905. For nine months the feature is the large gain shown in imports as compared with exports. Following will be found the imports and exports of merchandise for September and the nine months of 1907, as compared with the same periods of the two preceding years:

September	1905	1906	1907
Imports—Free of duty.	$44,739,283	$46,213,258	$48,686,412
Dutiable	57,248,047	56,405,065	57,631,384
Total	101,987,330	102,618,323	106,317,796
Exports—Domestic	134,210,474	136,585,805	133,330,254
Foreign	1,773,342	1,911,149	2,021,047
Total	135,983,816	138,496,954	135,351,301
Excess of exports.	33,996,486	35,878,631	29,033,505
Nine mos. ending Sept.			
Imports—Free of duty.	386,442,551	416,542,044	499,277,969
Dutiable	485,829,977	531,725,073	608,857,019
Total	872,272,528	948,267,117	1,108,134,988
Exports—Domestic	1,081,592,566	1,218,534,893	1,309,612,742
Foreign	20,958,809	19,299,531	22,008,913
Total	1,102,551,375	1,237,834,424	1,331,621,655
Excess of exports	230,278,847	289,567,307	223,486,667

There is here shown a decrease of 15.5 per cent. in imports as compared with August, but a gain of 3.6 per cent. over September last year. Exports are 6.3 per cent. larger than in August, but 2.2 per cent. smaller than in September a year ago, and a fraction of 1 per cent. smaller than in September, 1905. For nine months it is found that exports are 7.6 per cent. larger than a year ago, while imports show more than double this proportion of gain, increasing, as they do, 16.8 per cent. over 1906. The following tabular comparison of August and September imports will be found valuable, as indicating the direction and extent of the decline in imports shown in September from August:

DUTY-FREE IMPORTS.

	1905	1906	1907
August	$39,782,642	$43,939,223	$56,288,499
September	44,739,283	46,213,258	48,686,412
Increase	4,956,641	2,274,035	*7,602,087

DUTIABLE IMPORTS.

August	$56,048,516	$61,757,792	$69,503,657
September	57,248,047	56,405,065	57,631,384
Increase	1,199,531	*5,352,727	*11,872,273

ALL IMPORTS.

August	$95,831,158	$105,697,015	$125,792,156
September	101,987,330	102,618,323	106,317,796
Increase	6,156,182	*3,078,692	*19,474,360

* Decrease.

Two years ago in September, it will be seen, imports gained over August in both branches of trade, while last year free imports gained and dutiable imports fell off. This year, however, free imports decreased $7,602,087 and dutiable imports decreased $11,872,273, making a total decrease in all imports of $19,474,360, a decrease six times that shown in September last year.

Some details of the export trade in leading products in September, 1907, compare with the same period of the preceding year as follows:

	Quantities 1907	1906
Wheat, bushels	9,598,235	11,104,065
Corn, bushels	2,818,346	3,321,060
Wheat-flour, barrels	1,206,414	1,524,468
Cotton, bales	379,936	903,481
Mineral oils, gallons	97,095,404	98,130,562
	Values 1907	1906
Wheat, bushels	$9,405,885	$8,443,560
Corn, bushels	1,841,470	1,809,274
Wheat-flour, barrels	5,245,143	6,201,063
Other breadstuffs	1,063,043	541,326
Meats and dairy products	12,378,827	15,960,928
Animals	2,181,831	2,469,348
Cotton, bales	24,285,553	25,264,325
Mineral oils, gallons	7,060,889	6,648,013
Total value	63,462,641	67,737,837

There is here shown a decreased movement of grain but an increased value of these shipments, due to higher prices, though decreased shipments of flour offset the gains in other lines, making for a net small decrease in all exports of breadstuffs. Higher prices, too, almost offset much smaller shipments of cotton. Provisions exports decreased in value, as did those of meat-producing animals, and the only class of products gaining was mineral oils. The net decrease in exports of these five leading products is 6.3 per cent., against a net decrease in all exports of 2.2 per cent. from a year ago.

STATE RAILROAD COMMISSIONERS' CONVENTION.

A plea for enlarged powers for the state railroad commissions was made in a report adopted by the nineteenth annual convention of representatives of those bodies in session at Washington last week. In the matter of granting railroad charters, it was urged, the state commissions could pass upon the question of public convenience as intelligently and as conscientiously as the legislatures, being every day in contact with the transportation problem, and they could exercise better judgment as to financing, while their investigations as to locations of roadbed and stations would be more careful than it would be possible for the legislature to make. If, the report continued, there is a tendency toward a great centralization of power in the national government, then the nearer the federal body gets to the people the better, and in the matter of transportation the state railroad commissions furnish the best means of reaching that end. The convention adopted a recommendation urging Congress to so amend the Hepburn act as to provide that before a railroad shall put in effect a rate declared by a shipper in a formal complaint to be unjust and unreasonable, the Interstate Commerce Commission shall be authorized to determine whether such rate is just and reasonable. A report was adopted urging that the commission should have the same control over classification as over rates, as was another recommending that a law be passed requiring the commission to proceed to make a uniform classification. Still another report which received the approval of the convention advocated substantial harmony in legislation with respect to all phases of the complex transportation question.

Throughout the proceedings of the convention there was manifest an undercurrent of disapproval of the policy of the administration looking to the more complete control of railways by the federal government. This sentiment found expression in a report adopted on the last day of the convention in which the following significant sentences occurred: "So far as we are advised, we know of no general reduction (in rates) due to any action of the federal authorities. We believe the best interests of the people would not be served by placing the entire responsibility for rate control in the federal government. There have been many general rate reductions in different states followed by reductions in interstate traffic, and, so far as we know, these have all been brought about by the affirmative action of the state authorities." The report took the ground that there should be a much closer relationship between the federal and state authorities than seems to exist at present, and that in many matters a state commission should act as agent for the Interstate Commerce Commission, and would so act to the advantage of both.

Before adjourning, the convention adopted a report dealing with the subjects of demurrage and reciprocal demurrage, in which the position was taken that the states have unquestionably jurisdiction over those matters on interstate shipments. The report urged uniformity in rules to govern those questions. As the law now is, the report said, a shipper cannot collect reciprocal demurrage on interstate shipments except in certain cases, although he pays demurrage to the carrier whenever he fails to unload cars as required by the rules of the carrier. The suggestion was made that if the courts of last resort should hold that the states have no jurisdiction whatever over the subjects under discussion, Congress should be asked to confer that authority on the Interstate Commerce Commission, to which tribunal the now remediless shipper or consignee in many states may apply for relief. The opinion was quite generally expressed by those who followed the proceedings of the convention that a conservative feeling has followed the wave of radicalism that marked the attitude of the states toward the railroads earlier in the year.

THE ROCK ISLAND REPORT.

Among the annual reports of railroads which made their appearance last week, that of the Rock Island Company and those of its controlled organizations, including the Chicago, Rock Island & Pacific Railway, the St. Louis & San Francisco Railroad, Chicago & Eastern Illinois and the Evansville & Terre Haute, attracted the greatest attention. In view of the great inflation of capital which attended the acquisition of the various properties now composing the so-called Rock Island-Frisco system and the attendant plans for the construction of a large amount of additional mileage, the position of this enterprise has been regarded with something akin to anxiety by conservative financial interests, the low market values of some of the securities emanating from the combination being a visible evidence of this. Moreover, it will be recalled that after dividends were paid at the rate of 4 per cent. on the preferred stock of the Rock Island for some time, they were suspended at the beginning of this year, the understanding being that this step was taken with a view to providing more liberally for the needs of the system in respect to improvements.

The report of the Rock Island Company gives its income account for the year ending June 30, 1907, compared with the year before, as follows:

ROCK ISLAND COMPANY OF NEW JERSEY.

Year ending June 30	1907	1906	*Changes*
Div. on Chic., R. I. & Pacific Railroad stock.	$3,850,857	$4,370,805	D. $519,948
Other income	21,560	42,662	D. 21,102
Total income	3,872,417	4,413,467	D. 541,050
Expenses and taxes	48,151	24,006	I. 24,145
Balance	3,824,266	4,389,461	D. 565,195
Interest on Chic., R. I. & Pacific R. R. bonds.	3,668,977	3,644,442	I. 24,535
Bal. avail. for div.	155,289	725,019	D. 589,730
Profit and loss surplus	451,548	296,559	I. 154,989

Supplementing this is a comparison of the results of all the operating railroad companies in the system for three years:

ROCK ISLAND-FRISCO SYSTEM.

Year ending June 30	1907	1906	1905
Gross	$112,464,417	$95,376,759	$84,483,274
Expenses	74,237,639	63,294,498	57,149,658
Net	38,226,778	32,082,259	27,333,606
Other income	2,600,809	2,989,528	2,534,699
Total income	40,827,587	35,071,787	29,868,305
Charges, taxes, etc	25,783,098	24,397,551	22,895,891
Surplus	15,044,489	10,674,236	6,972,414
Dividends	5,568,092	6,324,560	6,377,096
Surplus	9,476,397	4,369,676	595,318
Improv. and betterments	....	2,151,201	79,286
Profit and loss surplus.	9,476,397	2,218,475	516,032

On the whole, the showing made by these properties has produced a favorable impression. The Rock Island Company itself—that is, the holding corporation, which through its control of the railroad organizations unites the system—shows, it must be admitted, an outcome as respects revenue which does not hold forth much ground for hoping for an early resumption of dividend payments. This, however, it will be seen, is the direct result of the payment of decreased dividends on the Rock Island Railway Company's shares, while it is also to be considered that the holding company has as yet received no return upon the outstanding common stock of the San Francisco. On the other hand, when the combined income accounts of the subsidiary companies are examined, it is seen that the surplus for dividends amounted to no less than $15,044,000 for the year, against $10,674,000 the year before, and a little less than $7,000,000 in 1904-05. The dividends actually paid by the companies, amounting to $5,568,000, were $736,000 less than the year before, and the surplus over such payments, of $9,476,000, is an increase of over $5,000,000. Deducting from the surplus the proportion which minority holders of the various companies might claim, the balance accruing to the Rock Island would amount to close to $9,000,000, or in the neighborhood of 18½ per cent. on the Rock Island Company's preferred stock. In other words, the company, in spite of heavily increased operating expenses, in which particular it suffered in common with other systems, has shown an enormous increased earning power, representing, no doubt, the results attending the completion of a large proportion of its new lines in the southwest. At the same time it was recognized in Wall street circles that the Rock Island property is still some distance from paying dividends, even if the results exhibited in the report offer substantial encouragement in regard to its future.

THE STOCK MARKET BREAK.

Since the beginning of the present year the stock market's almost continuous decline has been diversified on three occasions by outbreaks of liquidation and correspondingly severe breaks in quotations. The first of these occurred in March, when the fact became apparent that the public was in no mood to purchase securities at the inflated prices of 1906, and larger operators consequently began to unload simultaneously in a way which was highly destructive to market values. In August there was another of these demonstrations, proceeding mainly from the narrowing of the money situation and the indications that speculation would have to contend with limited accommodations and high interest rates until after the crop movement had been completed. Finally, in the present week, the stock market has encountered a third of these demoralizing incidents, resulting in a further lowering of the general range of quotations, carrying active stocks for the most part to the lowest level of the year, and in some cases to below the quotations recorded in 1903 during the so-called "rich men's" panic. It is interesting to contrast the low figures made for the leading trading stocks in each of the three pronounced declines which have marked the year with the high

figures for both 1906 and 1907, the highest quotations of this year in almost all instances having been reached during the month of January. This is displayed in the following tabulated form, covering prices for some twenty-three issues which are considered leaders of the share market:

	High, 1906	*High,* 1907	*Low, Mar.,* 1907	*Low, Aug.,* 1907	*Low, Oct',* 1907
Atchison	110½	108¼	82⅝	81¾	78
Baltimore & Ohio	125⅛	122	90⅜	87	84
Chic., Mil. & St. Paul	199⅝	157½	122½	117½	110¾
Erie	50⅞	44¼	21⅞	18	18
Great Northern pfd.	348	189¾	126	114	116½
Louisville & Nashville	156½	145½	108	103	98½
Missouri Pacific	106¾	92¾	64	63	51
Northern Pacific	232½	189½	114¼	113	115¼
Pennsylvania	147½	141⅜	114	114¾	115¼
Reading	164	139⅝	91	85¼	83⅝
Southern Pacific	97½	96¼	69¾	79¾	69¾
Southern Railway pfd.	103	94½	70	50⅛	43¼
Union Pacific	195⅜	183	120¼	120½	113½
Amalgamated Copper	118¼	121⅞	78½	65	44½
Am. Smelt'g & Refin'g	174	155	140¼	90	61¼
Brooklyn Rapid Tr	94⅝	83⅝	45¼	37¼	38½
Colorado Fuel	83⅝	57⅞	29	22	15
Consolidated Gas	181¾	140¾	110	99½	84
General Electric	184	163	136½	120	109½
Interborough-Met	55⅜	39	22⅛	[illegible]	8
Interborough-Met. pfd	87⅜	75¼	52	20½	20
U. S. Steel	50¼	60⅜	31½	29¼	22
U. S. Steel pfd	113¾	107¾	91½	91⅛	81⅛

It is, of course, to be taken into consideration that the extreme high prices of a number of the above in 1906 represented not merely speculative exaggeration but the anticipation of "rights," etc., which, as in the case of Great Northern and Northern Pacific stocks, were ultimately deducted from their value. Still, it will be seen that the high figures of the present year were a considerable way below those of 1906. The March break reduced them with much greater severity, while that of August involved, in numerous instances, the cutting in half of the inflated figures. The October break—that of the present week—has involved further reductions, although the effects are somewhat irregular. Of the stocks included in the table, seven have not seen as low quotations as they did in August, and this fact might be construed as indicating that in some stocks, at least, the point of resistance to further extreme bearishness had been reached; in other words, that the stock market's figures were overdiscounting the bad features of the situation.

In some respects this week's decline was more sensational than those of March and August. It proceeded apparently from an ill-judged and ill-managed attempt to "corner" a mining stock—United Copper—dealt in on the curb market, which resulted in the suspension of two houses involved in the matter and the retirement of F. Augustus Heinze from the presidency of the Mercantile National Bank of New York. There had naturally been a flood of rumors regarding firms and institutions, which constituted the worst feature of the situation, and, in fact, caused the street to exhibit momentarily something akin to hysterical feeling. The clearing up of the matter, particularly as the solvency of no institution was involved, was indeed received with expressions of relief by the financial community, even though no assurance is conveyed by the events of the week that the bear market of 1907 has culminated, as was demonstrated by the renewed weakness in different parts of the list in Friday's transactions.

AMERICAN MANUFACTURERS AND THE EASTERN TRADE.

Editor of BRADSTREET'S:

SIR—We are threatened with a superfluity of manufactures unless we can find extensive new markets for our goods. Fortunately, the completion of the Panama canal will enable us to reach the countries of western South America and the Orient with greater facility than our European competitors. It will not do, however, to wait until the short route is open, under the impression that we can sell goods in these markets by simply shipping to them. If our exporters have not established a demand by that time, it will be too late to get such a proportion of the business as we shall need and should, with proper endeavor, be able to secure.

The British or German manufacturer smiles at the mention of the prospective advantage of the Panama canal to our exporters. He entertains the general opinion of Europe that the isthmian waterway will be of greater commercial value to other nations than to America. He sees no reason at present to fear our competition in the markets of the Far East, nor can he discern any preparation on our part to open trade successfully in those fields. Furthermore, he only asks a few more years of exemption and he will defy our competition. The East is conservative in the extreme, and goods once established in its markets stick like burrs. The old houses of Calcutta and Hong-Kong are importing many staple articles of precisely the same kind as they received in the time of the old "Jahn Kampani." Twenty years ago an English manufacturer introduced into the Straits Settlements certain calico prints which found favor with buyers. Later, another house imported precisely the same goods from the same factory, the only difference being in the brand name, but they have never been able to secure within 15 per cent. of the same price for them.

Without having a similar degree of conservatism to contend against, our shippers must expect to experience almost as much difficulty in placing their wares in South America. Notwithstanding the advantage we shall derive in that region from the interocean passage, it will be no easy matter to disturb the Europeans, who already control its import trade, whose capital has developed the several countries, and whose methods of trading and banking are understood by the people.

The American manufacturer is fatuously self-confident. He thinks that he has only to ship his goods to a foreign country to sell them, and he decides that when he gets ready and his factory begins to run slack on domestic orders he will go after the outside business and get it. He cannot too quickly disabuse himself of that idea. Just as surely as he will have to seek new markets within a few years, so surely will he find them difficult to enter unless he has prepared the way beforehand. It is none too soon to commence a vigorous campaign in Oriental markets anticipatory of the opening of the canal. This, not only because European houses are strengthening their foundations daily, but because it takes years, as a rule, to introduce new goods.

The English and Germans are the principal competitors who will be encountered in the East. The latter are the most aggressive. They are constantly extending their foothold and seldom lose any ground. The Japanese are making preparations to secure a large share of the trade of China and Manchuria, and ten years hence will doubtless be formidable rivals of the nations that earlier entered the field. In this company the few American firms seeking customers are neophytes. They have everything to learn about the markets of the East. They are ignorant of the most elemental factors in the business and appear to be careless of conditions that vitally affect success.

It is difficult to make American shippers understand that sales in Oriental countries frequently depend upon what seem to be trivial circumstances. A consignment of goods from England reached Hong-Kong some years ago which, on being opened, showed the cases to have been stenciled on both inside and out. This was a mistake, and when the order was renewed the stamp was placed, as usual, on the outside, but buyers noted the change and refused to accept the goods on the same terms as the first shipment. The firm has been obliged to stencil its cases inside and out ever since. In another instance, an English firm has for many years had a large sale for a line of piece goods carrying the "Beaver" trade-mark, or "chop," as the Chinese call it. A German house began to import a similar line with the same stamp. The latter had a considerable sale until it was noticed that the letters composing the word "Beaver" differed slightly from those on the original goods. Immediately the sale of the German import fell off and the British article commanded a 10 per cent. higher price.

C. H. FORBES-LINDSAY.

Philadelphia, October 14.

EDITORIAL NOTES.

The annual report of the Southern Railway Company for the year ended June 30 last shows gross earnings of $56,657,994, an increase of $3,016,555. However, operating expenses were larger by $4,926,143, which brought the net earnings down to $11,958,712, a decrease of $1,909,580. After allowing for fixed charges there was a balance of $2,290,321, a decrease of $2,938,744. There was a balance over preferred dividends of only $790,321, against $2,229,065 in the preceding year, or a decrease of $1,438,744. It should be noted in this connection that the company distributed $1,500,000 less to stockholders in the way of preferred dividends than in 1906, and the balance to credit of profit and loss at the close of the year is given as $6,242,162. The income account for the year shows the following totals and changes from a year ago:

	1907	*Increase*
Miles operated, average	7,546.86	172.88
Gross earnings	$56,657,994	$3,016,555
Expenses and taxes	44,699,282	4,926,143
Net earnings	11,958,712	*1,909,587
Income other sources	1,829,281	240,280
Total income	13,787,993	*1,669,306
Interest and rentals	11,265,615	1,412,257
Other deductions	232,056	^142,818
Total deductions	11,497,672	1,269,438
Balance over fixed charges	2,290,321	*2,938,744
Dividends preferred stock	1,500,000	*1,500,000
Balance over preferred div'ds	790,321	^1,438,744
Special appropriations for improvements, betterments and charges not to be capitalized	536,334	*463,492
Balance carried to profit and loss	253,986	*975,252

* Decrease.

Wall street had matters of so much greater importance on which to concentrate its attention that comparatively little note was taken of the passing of dividends by two traction companies of considerable magnitude, both as respects their properties and the capitalization involved in each. The concerns in question were the Toledo Railway & Light Company, which on last Monday passed its quarterly dividend of 1¼ per cent., and the Detroit United Railway Company, which also omitted the payment of its usual quarterly division of the same amount. In both cases the stocks of the organizations in question, while they are to some extent dealt in in New York, are more active features in the Canadian markets, investors in the Dominion being large holders of the same. The effect of the suspension of dividends was, therefore, productive of a considerable flurry in the Montreal and Toronto markets, with an adverse effect upon the general range of quotations for all securities dealt in there. In both instances the managements accompanied their action by explaining that while earnings are satisfactory, the companies are under the necessity of providing for a large amount of improvements, and that the condition of the money markets forbids the disposal of new bonds.

While the annual meeting of the New York, New Haven & Hartford Railroad Company's stockholders was adjourned on Wednesday until the last day of the month, the statement of its income for the twelve months ending June 30 was made public. Compared with the two preceding years, the results were as follows:

	1907	1906
Gross	$55,145,633	$52,499,242
Expenses	37,850,081	35,222,586
Net	17,295,551	17,276,65
Other income	4,079,745	2,660,837
Total income	21,375,297	19,937,493
Charges	11,695,800	9,752,115
Surplus	9,679,446	10,185,377
Dividends	7,469,428	6,467,092
Improvements on leased lines	18,753	....
Surplus	2,191,264	3,718,285
Profit and loss surplus	17,738,196	13,081,445
Betterments	27,733,800	14,687,589

As has been almost universally the case with the larger railroads, the substantial gain in the New Haven's gross earnings was swallowed up by the increased operating expenses. Furthermore, the charges expanded from $9,752,000 to $11,695,000, showing the effects of the present policy of acquiring other transportation lines in the territory of the system and assuming obligations for the same. It is to be noted, however, that the augmented fixed charges are partly offset by an increase in the income from other sources than operation of $1,419,000, the total of that item being $4,079,743.

"Thoughts on Business," a volume of 237 pages, written by Waldo Pondray Warren and published by Forbes & Co., of Chicago, is a work the reading of which should prove especially profitable to employers as well as employees. It is a volume that contains unique bits of business wisdom couched in terse, snappy language, and it is not of the dry business maxims type. The employee who takes the trouble to read the book may be stimulated to develop another view point, to force the growth of ambition, which may lead to greater and better things; and, on the other hand, the employer will find that the work contains much food for thought. It is true that many of the "thoughts" have appeared at some time or another in a number of the leading newspapers, but that fact does not detract from the merits of the work in which they are all brought together.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Insurance—Death—Excepted Causes.

The Supreme Court of Washington held, in the case of Starr vs. Aetna Life Insurance Company, that the plaintiff, suing on an accident policy for the death of the insured, did not have the burden of disproving that death resulted from excepted causes.

Insurance—Agent's Representations.

The United States Circuit Court of Appeals for the Eighth Circuit held, in the case of The Connecticut Fire Insurance Company vs. Buchanan, that an agent's representations or knowledge were ineffectual to change the provisions of a written policy in the absence of fraud or mutual mistake.

Libel—Publication—Advertisement.

The United States Circuit Court of Appeals for the Seventh Circuit held, in the case of Peck vs. Tribune Company, that the publication by a newspaper of an advertisement containing a portrait of a woman, together with a statement calculated to convey the impression that she was a nurse and had personally used, and as a nurse had recommended the use of, a certain brand of whiskey as a tonic, did not constitute a libel per se, and in the absence of an allegation of special damage would not support an action.

City Office—Vacancy—Conviction.

The Supreme Court of California held, in the case of McKannay vs. Horton, that under the provision of the charter of San Francisco, that an office becomes vacant when the occupant is convicted of a felony, there was a vacancy in the office of mayor when a verdict was entered on the trial of the existing holder of that office for a felony, and the board of supervisors had, on the judgment thereon being certified to them, declared the office vacant, though an appeal from the judgment was perfected and a certificate of probable cause granted.

Embezzlement—Corporation—Agent.

The Kentucky Court of Appeals held, in the case of Commonwealth vs. Jacobs, that one who was employed as an agent of an insurance company to solicit the insurance and collect the premiums and account for the same every week, for which he was to receive 15 per cent. of the money collected as his salary, had no right to use out of the fund any more than 15 per cent. thereof, and that by failing to pay over the balance of said sum on demand he was guilty of embezzlement under section 1202 of the Kentucky statutes, which provides that an agent of a corporation who shall embezzle or fraudulently convert to his own use money or property of such corporation shall be confined in the penitentiary not less than five nor more than ten years.

Action—Limitation—Death—Damages.

The United States District Court for the Southern District of New York held, in the case of Swanson, Adm'r, vs. Atlantic Gulf & Pacific Company, that damages for the death of an intestate within the state of Maryland (on the Potomac river) was not recoverable in New York by action brought after the lapse of more than twelve months from the time of the accident, notwithstanding the respondent had no place of business in Maryland. The Maryland code directs that actions for damages for the death of a person caused by the wrongful act, neglect or default of another shall be commenced within twelve calendar months after the death of the deceased person, and the respondent had at the time of, and after the accident an office in New York, where the action could have been brought in season to save the right to sue.

Corporation—Charter Amendment.

The constitution of Utah contains a provision to the effect that all laws relating to corporations may be amended or repealed, and all corporations doing business in the state may as to such business be regulated or restrained by law. The Supreme Court of the state lately held, in the case of Garey vs. St. Joe Mining Company, that under this provision the state may not amend charters of existing corporations so as to change the fundamental character of the corporation, impair the object of the grant or rights vested thereunder, nor amend them in such a way as will impair the contractual relations or rights of the stockholders among themselves or between the corporation and its stockholders, but that the legislature has the right to amend the charter or laws relating thereto, so far as the state is interested, to modify any right, privilege or immunity granted by the state, to repeal the charter or all laws under which it was granted, to take away altogether the franchises and privileges granted under it, and to make reasonable amendments or alterations deemed necessary to carry into effect the purposes of the grant or to protect the rights of the public, of the incorporation and its shareholders, when such amendments or alterations will not defeat or substantially impair the object of the grant or any vested rights. In the case before it the court decided that a statute authorizing majority stockholders to amend the articles of incorporation against the consent of the minority so as to make non-assessable, full-paid capital stock assessable and subject to sale for such assessment, affected the contractual relations of the stockholders among themselves, and was an impairment of the obligation of a contract within the prohibition of the Federal Constitution.

Agent—Authority—Custom—Contract.

In the case of Bowles et al. vs. Rice et al., recently decided by the Supreme Court of Appeals of Virginia, it appeared that an agent was empowered by written authority to sell within thirty days certain timber for $1,100 cash, the principal agreeing to execute a proper deed to the purchaser and to allow two years for its removal. The following day the agent entered into an agreement with a purchaser, in consideration of $1,100 payable twenty-eight days from date, by which the agent sold him "all timber of every character and description on the principal's farm," with the usual rights as to facilities for cutting, sawing and hauling said timber and the lumber made therefrom. The court held that the agent exceeded his authority by selling on time and by authorizing the location of a sawmill on the premises to cut the timber. The court further held that knowledge of the existence of a custom must be brought home to the parties to be affected thereby unless the evidence shows it to be so uniform and notorious at the place where the parties reside as to raise a prima facie presumption that they knew of it.

Employer's Liability—Assuming Risk.

The Kentucky Court of Appeals held, in the case of The Kentucky & Indiana Bridge Company vs. Marvin, that the general rule that when a master has promised to repair a defect the servant does not assume the risk of injury caused thereby within the time reasonably allowed for its performance, is qualified by the exception that if the servant is acquainted with the premises and the danger of working without the appliances or improvements promised by the master is obvious, and such as no person of ordinary prudence would undertake, the servant assumes the risk and cannot recover for injuries sustained by him while thus employed. The court further held that where there is no defect in the premises or appliances and the master was only delinquent in failing to furnish a lantern to enable the servant to see the work he had to do, it would be extending the rule to an unreasonable length to hold that the servant, although fully acquainted with the premises and the necessity of a light, could nevertheless undertake to perform his duty and hold the master responsible for injury sustained while so engaged.

Municipality—Contract—Ultra Vires.

In the case of Bell vs. Kirkland et al., recently decided by the Supreme Court of Minnesota, it appeared that a municipal corporation let a contract for the construction of a sewer without complying with charter requirements and without obtaining the consent of two property owners through whose lands the sewer was to pass, or of the federal authorities for its outlet on government land. The plaintiff sued for the balance of an account for materials furnished the contractor on a bond given, among other things, for the benefit of material men. The bondsmen interposed the defense that the contract was void because ultra vires, and that therefore they were not responsible on the bond. The court held that the contract in issue was ultra vires in a restricted sense only; that the fact that the city had not procured a right of way through all lands of private owners through which it was to pass did not invalidate the contract, and that the facts that as to a small portion of the contract with the municipality only it was ultra vires in any sense, and that it had been substantially executed by the parties basing rights upon it, were strong if not conclusive considerations for refusing to hold it absolutely void.

BUSINESS NOTES.

City Debt.

The Census Department reports the total indebtedness of 154 selected cities in 1905 as $1,618,414,005, of which $1,444,725,797 was classed as "funded" and the remainder as "floating." Of that remainder, $75,494,792 was classed as "revenue or tax loans"; $77,982,998 as "special assessment loans"; $18,950,122 as "outstanding warrants," and $1,250,296 as "miscellaneous obligations." Of the aggregate indebtedness thus reported by the 154 cities, $1,521,630,914 was incurred by the city government, $36,822,609 by independent school districts for the same territory as the city, and $59,960,482 by civil divisions having such similar territory and also authorized to incur debt. The total indebtedness of 148 cities for which reports were received for the years 1902 to 1905 was $1,297,735,510 in 1902, $1,396,421,820 in 1903, $1,528,724,360 in 1904 and $1,610,074,280 in 1905. The indebtedness, less sinking fund assets, for these 148 cities for the years mentioned was $1,026,228,373, $1,106,327,124, $1,225,851,090 and $1,290,678,632. In four years the population of these cities increased 7.9 per cent., while the indebtedness, less sinking fund assets, increased 25.8 per cent., or more than three times the per cent. of increase of population. As a result, the per capita net indebtedness, which was $51.14 in 1902, had risen to $58.48 in 1905.

Phosphorus and Rail Steel.

The *Iron Trade Review* says: "While the text of the report by the American Railway Association's rail specification committee will not be made public until the semi-annual meeting of the association at the close of this month, it is generally accepted that the report will call for a reduction in the phosphorus in Bessemer rail steel from .10 to .085 per cent., with a 25 per cent. discard. This reduction the rail manufacturers properly designate as impossible. On the face of it, the reduction does not seem great, but the rail mills probably know a good many things which the railroad experts did not know, among others how large a tonnage of Bessemer steel has been made in the past twelvemonth with a phosphorus content quite above the .10 per cent., which the railroads regard as an established point from which to base improvement. The great bulk of the ores which are used in making Bessemer steel are ores which run just a little above or just below the phosphorus content which will make a steel containing .10 per cent. phosphorus. Of course, there are ores which, used alone, would make a steel well under .085 per cent. That is not the point; the question is, 'how much steel would they make?' Last year 3,705,642 gross tons of Bessemer steel rails were made. With a 25 per cent. discard, and other losses thereafter, this would involve considerably more than 5,000,000 tons of ingots to be produced, with the reduced phosphorus, as the discards could hardly be put back into the converter, and would have to be rolled into some other form. It is quite doubtful if there is ore to make this tonnage, but even conceding that there is, nothing would be left to improve the remaining ores, which could not by themselves be used at all for Bessemer steel. Last year about 8,000,000 tons of Bessemer steel ingots were made which did not go into rails. This industry would be wiped out of existence."

Downward Trend of Prices.

"Prices in the United States and in Great Britain for staple commodities generally appear to have reached their maximum in the earlier half of 1907," says the *Wall Street Journal*. "Since midsummer there has been a lowering tendency. This has not been universally so, but of an extent sufficient to prove that there is a yielding of values on the supply side of the market in favor of encouraging demand at lower levels. The list of commodities compared shows groups of advances, it is true, others of considerable stability, but still has important groups, such as the textiles and the metals in the United States, exhibiting pronounced weaknesses. Two such important classes of articles cannot at the same time be affected in the same manner without suggesting a common cause for their behavior. Questions of the course of prices are now of fresh interest as an indication of what the future trend of business is to be. A review of the index numbers of the London *Economist* shows that the apex of prices was reached at the end of May, 1907, when the number stood at 2601, compared with 2457 October 1. In the course of four months 144 points were lost in the price movement as a whole. In the United States, according to BRADSTREET'S index number, the maximum was reached on March 1, 1907, at which time the index number was 9.1293, compared with 8.8506, a loss of .2787. A comparison of the last quarter covering the months of July, August and September is made below of the two different sets of index numbers, showing the losses, month by month, in each case:

	Economist	*Loss*	BRADSTREET'S	*Loss*
August 1	2571	..	8.9304	..
September 1	2519	52	8.8297	.1007
October 1	2457	114	8.8506	.0798

The *Economist* group of losses shows continuous decline through the quarter, while in the BRADSTREET figures there is a recovery during September, probably due to the exceptional strength in food products, in fuels and in leading classes of iron and steel products. The facts thus show that in the British market, where competition is keenest, the course of decline continues, while in the protected market of the United States, which is less subject to a competition both from within and from without on account of consolidations, the decline is less steady, though probably not any less certain in its main tendency."

Durum Wheat.

According to the Minneapolis *Market Record*, "durum wheat is the child of good fortune. Predictions have been made by its enemies—since its production in the northwest has reduced the regular spring-wheat returns—that growers would see the folly of raising a wheat for which there was but a limited and uncertain market. This statement, while it may be based upon reasonable ground, has so far met defeat by untoward events in the general world's crop. Admitting all the arguments that have been used against the introduction of the wheat in the northwest, farmers have shown a decided weakness, if we may call it, for its great production per acre. Through shortages in the durum-wheat countries abroad the last two previous seasons, European countries were attracted to the United States, and the producers found a ready and large market for it in the export trade. It looks as if this season was to prove a repetition of previous years. The demand so far has been very keen, and in a period of strong markets durum wheat has had its share of the great advance. Within the last few days it has sold at record quotations. From the best sources it is learned that importing nations have absorbed an enormous line of this wheat. The extraordinary demand for breadstuffs has occasioned an excellent market for bread-making purposes. As a purely export grain the American variety appears to have established itself in the foreign markets."

Work of the Reclamation Service.

"In reclaiming the arid lands of the west the government has already expended about $26,000,000, and is spending about $1,000,000 a month," says the New York *Sun*. "The money used for the various projects is really a loan, an investment. Some of it has come back already, more is coming; and in the course of a few years all the cost of reclaiming millions of acres of hitherto useless lands will be returned to the Federal Treasury. Mr. Newell, director of the reclamation service, is authority for the statement that 'the plans thus far approved will provide for the reclamation of 3,171,000 acres of land. The average value of irrigated land in the United States is $47 an acre. This acreage, therefore, will add $149,037,000 to the taxable property of the United States in land values alone. The approximate total cost of the approved projects is $97,000,000.' Under the law the irrigated lands are sold only in small parcels to actual settlers. Farms are taken up under the homestead act, and no farm can consist of more than 160 acres. As the government charge averages only about $30 an acre, while the average value of such lands is $47, the purchasers of these lands are benefited by what may be called an 'unearned increment' to the extent of about 50 per cent. of their investment. From an engineering point of view the work being done by the reclamation service is only less interesting than that at Panama. These enterprises give employment to 10,000 men. It is estimated that when the work is ended homes will have been provided for 600,000 families. As $1,000 a family should be a low estimate for the average annual output of the farms they will cultivate, it may be assumed that these irrigated lands will add at least $600,000,000 a year to the national wealth."

CURRENT BUSINESS NEWS.

Commercial.

Buenos Aires, Argentina, will next year trade in grain futures, using the same rules and regulations as the Chicago Board of Trade. The capital of the new institution is 300 shares, each of $1,000.

During the first eight months of the current year the export trade of the United States amounted to over $1,176,000,000, of which only slightly more than 7 per cent. was carried in American vessels, while about 80 per cent. was carried in foreign ships. The following table shows how our export trade is carried (three figures being omitted):

	1907	1906	1905
Total value of exports of domestic merchandise	$1,176,282	$1,081,919	$947,382
Carried in			
Cars and other land vehicles	146,088	131,674	110,339
American steam vessels	86,147	83,159	82,047
Foreign steam vessels	921,530	839,306	735,108
American sailing vessels	4,825	6,422	5,573
Foreign sailing vessels	17,691	21,385	14,313

England and Germany's share:

	1907	1906	1905
England	$613,459	$559,555	$513,996
Germany	132,826	125,653	95,946

The official French crop report shows that 15,891,236 hectoliters of barley will be available, an increase of 3,015,389 over 1906, while 110,699,576 hectoliters of oats have been raised, an increase over 1906 of 20,153,307 hectoliters.

On Wednesday the wholesale price of spirits was advanced 1 cent a gallon at Cincinnati. The advance brings the price of a proof gallon of spirits up to $1 35. The price is the highest since the civil war and is due to the high price of corn and malt.

"Personal contact with a large number of manufacturers in New England in a wide diversity of metal lines the past fortnight has revealed the significant fact that without a notable exception every one is exceedingly cheerful in the face of a materially diminished volume of new orders," says the *Iron Age* in an editorial. "Each believes that his own attitude is affecting the market by curtailing the demand, for he is buying his raw materials carefully, and usually from hand to mouth, waiting until he can feel sure that prices have been readjusted to a new basis Each manufacturer also realizes that his own customers are holding back for the same reason. There is a complete understanding that stocks of raw materials and supplies are being greatly reduced, but that in spite of this fact current wants are totaling no inconsiderable volume of new business. The feeling is that nothing is wrong with basic conditions of the country and of the foreign market; that the influences that are affecting the market are artificial, and, on the whole, superficial."

Commissioner of Internal Revenue Capers is making strong efforts to promote the production of denatured alcohol under the legislation enacted by Congress last winter. He has prepared a statement showing the production of Great Britain during the fiscal year ended March 31, 1906, to have been about 6,798,566 proof gallons. Germany produced the equivalent of about 37,000,000 wine gallons for the year ended October 1, 1904. The United States produced during the six months ended June 30, 1907, 1,780,276 wine gallons.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom — The weather is less favorable for plowing, it being too wet. France — The weather continues favorable for plowing. Large quantities of wheat are reported having been sold for export, to go to the German frontier. Germany — The outlook for the crop is, on the whole, favorable. The supply of native wheat is fair. Italy and Spain—Seeding of the new crop is being done under favorable conditions. Hungary, Turkey and Bulgaria—Latest advices report that droughty conditions still continue. Roumania—It is reported that less than half the acreage is seeded to wheat this year than was seeded last year, and most of this is done in dry soil. The corn crop is a short one, but well cured. Supplies are light. There are rumors of a possibility of a prohibition of the exportation of all grain to prevent a dangerous depletion of the already small reserves. Russia — In the southwest droughty conditions continue and supplies are generally light, and in the southeast rains are wanted, although supplies are liberal. In the interior the rainfall has been mostly sufficient. Argentine — The outlook for wheat is excellent, with indications pointing to a record yield. The corn crop is looking well, with the area larger than that of last year. Australia—It is estimated that the exportable surplus will only amount to half of that of last year. Droughty conditions still prevail.

A cut of 1 to 1¼ cents has been made in prices of leading brands of bleached cottons by Marshall Field & Co. The reduction, as the head of the cotton goods department announces, is due to the decline in cotton and to trade reasons, and that they desire to be in the lead in making prices.

Because of the high prices being paid for all cereals, North Dakota farmers, especially those of the Red River valley, are receiving greater returns from their crops this year than for any of the last half dozen seasons. Outside the famous valley the yield was not so large as last season, but it was taken off cheaply, and the farmers are realizing heavily. Wheat is selling at more than $1 a bushel at all stations in the state, and at some barley has almost reached that figure, while flax ranges even higher, and oats and corn are bringing bigger prices than ever before.

Referring to the export of copper from Japan, Consul-General H. B. Miller, of Yokohama, furnishes the following statistics from an Osaka paper. The total shipments of copper last year, compared with the two previous years, were as follows:

	Pounds	*Value*
1904	46,537,509	$6,453,000
1905	45,386,809	8,034,000
1906	75,481,152	12,502,000

It is said that the national Board of Health of Mexico contemplates issuing an order prohibiting the sale of imported canned goods in Mexico. An official investigation resulted in the charge that American manufacturers and dealers in these goods have used Mexico as a dumping ground for adulterated and impure stock since the pure food law went into effect.

The preliminary official estimate of the Roumanian wheat crop is 46,000,000 bushels, against 110,000,000 bushels last year. This decrease of 64,000,000 bushels is only 10,000,000 short of the entire exports for the past year from the Danubian sections. The previous year the total exports were 70,746,000 from the Danube, and two years ago the total was only 29,034,000. The shortage in the crop of Austria-Hungary, of Roumania and the generally admitted shortage in all the Danubian provinces is certain to have a considerable influence on the Danubian exports. The total so far since August 1 has been 7,448,000, against 18,856,000 last year and 25,736,444 two years ago. The latest reports on the corn crop are that it will be a very small one. The Roumanian corn crop last year was 128,000,000 bushels. This year the official preliminary estimate is only 61,000,000 bushels. Two years ago the crop was only 68,000,000, yet the exports were 14,000,000 bushels, while the preceding year the crop was an absolute failure, amounting to only 19,000,000 bushels, and exports were about 3,000,000 bushels.

The preliminary official estimate makes the Argentine wheat area 14,767,000 acres, against 14,065,000 acres harvested last December. The estimate of the export surplus for the current year at 107,000,000 bushels.

The November government report on grain will be issued on Friday, November 8, at 1 p. m. The report will cover the average yield and quality of corn, buckwheat, flax and potatoes and the percentage of old corn in farmers' hands. The December report will give the condition of wheat and rye, the area of the new crops and the average farm values.

Financial.

A recent decision by Justice Woodward, in the Appellate Division of the Supreme Court, Second Department, holds that customers must be given opportunity to put up additional margin when original margins are becoming exhausted, and that accounts cannot be sold out merely as the result of a notice printed on notification memorandum.

Consul-General H. B. Miller, of Yokohama, gives the following summary of Japanese taxes and subsidies. The following are the leading sources of revenue from taxation: Land tax, $42,816,000; liquor tax, $32,725,000; customs duties, $18,059,500; stamp receipts, $8,961,500; textile consumption tax, $7,912,000; sugar consumption tax, $5,560,000.

For the fifth time there will be no state tax in Wisconsin this year, the state treasury being in such a prosperous condition that no tax is required.

A New York Stock Exchange membership sold this week for $68,000, against $95,000, the high record, in 1906, a drop of $3,000 from the last preceding sale this year.

The United States Express Company on Tuesday declared a semi-annual dividend of 3 per cent., placing the stock upon a 6 per cent. basis instead of 4 per cent. per annum, as previously.

Directors of the Detroit United Railway Company announced Tuesday that they had passed the quarterly dividend of 1¼ per cent, explaining that large expenditures for improvements, equipment and additions to property, to be paid for from earnings, had made this necessary. The condition of the money market, making it impossible for the company to sell bonds, prevented the charging of these expenditures to capital account. The company began paying dividends on March 1, 1901, on which date 1 per cent. was disbursed, and that amount was paid quarterly until August 1, 1905, when the rate was raised to 1¼ per cent. quarterly.

Directors of the Toledo Railway & Light Company have passed the annual dividend of 1 per cent. It was stated, as reason for passing the dividend, that the growth of the company's electric-light business compelled largely increased power facilities; that street-railway traffic demanded new cars, and that bonds could only be sold at a discount greatly in excess of anything the company would feel justified in paying.

The Dresden (Ohio) National Bank closed its doors Tuesday. The bank was capitalized for $70,000 and carried considerable deposits, but most of these had been withdrawn.

According to Knauth, Nachod & Kuhne, sixty-seven railroad and miscellaneous bonds sold within the week ended October 11 at the lowest prices quoted in 1907.

On Thursday the firm of Haller, Sohle & Co., of Hamburg, failed, with apparent liabilities of from $3,500,000 to $4,000,000, though some accounts make them as high as $7,500,000.

On Thursday the State Savings Bank of Butte, Mont., closed its doors. Deposits of the failed bank, according to last published statement August 22, 1907, were $4,186,769, surplus and undivided profits $547,847, and capital stock $300,000. Press dispatches say its deposits were recently reduced by migrating miners after the partial closing of the Amalgamated mines, by about $1,500,000—to between $3,000,000 and $3,500,000.

The directors of the Boston & Montana Mining Company have declared a regular quarterly dividend of $2 and $4 extra. Three months and a year ago $2 and $10 extra were declared. The Boston & Montana has a dividend record as follows:

1898	$16	1903	$8
1899	36	1904	64
1900	43	1905	40
1901	35	1906	48
1902	6	1907	42

The Minister of Finance of Santo Domingo is en route to New York City to arrange for a bond issue of $20,000,000 forty-year 5 per cent. bonds. They must be sold no lower than 96, and may be redeemed at 102½ after the expiration of ten years. As the United States, under the recently ratified treaty, collects the Dominican customs, the bonds are practically guaranteed.

The total outstanding capital stock of the Pennsylvania Railroad Company on October 1 was $312,061,900, divided into 6,241;238 shares, held by 49.572 persons, the largest number of stockholders on record. The average holding of each of these persons was 126 shares, of a par value of $6,300. During September the number of holders increased 674, while the average number of shares owned by each holder was reduced by two shares. Of the total shareholders, 23,259, or 46.92 per cent. of the whole number, were women. This was an increase of 296 over the month of August. It is also stated that 19.27 per cent. of the entire capital stock of the company is held abroad. On October 1 there were 8,536 shareholders in foreign countries, with average holdings of 141 shares each.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Industrial.

An Italian law just promulgated provides that railroad employees in future shall come under the same regulations as employees of the other departments of the government. This will make railroad men who take part in strikes liable to punishment for misdemeanor.

Advices from Toronto, Canada, indicate that a great iron and steel plant is to be established there when certain details are worked out. Moose mountain ores are to be used. These ores will be taken from the mines in the township of Hutton, the northern terminal of the present Canadian Northern Ontario Railway.

Within the next ninety days, when orders for rails now in the Carnegie rail mills are filled, there will be a shutdown for rebuilding, and there will be no rails made for sixty days.

According to the *Wall Street Journal*, "steady operations of the steel mills and blast furnaces in the face of falling off in orders is explained by the following estimate of the value of orders on the books of the steel, car, locomotive and blast-furnace companies made early in the current year:

	Value of orders booked
Steel companies	$850,000,000
Freight-car companies	160,000,000
Locomotive companies	60,000,000
Passenger cars	30,000,000
Blast-furnace companies	70,000,000
Total	1,170,000,000

Specifications against these and subsequent contracts are responsible for the industrial activity, notwithstanding the falling off of from 20 to 40 per cent. in new business booked over the last six months."

The largest floating dock in the world, to cost $1,000,000, and to be situated next to the dock of the United States Steel Corporation at Duluth, Minn., is to be constructed for the Pittsburgh Coal Company. The increased demand for coal in the northwest necessitates the construction of a storing place where coal may be kept in large quantities all the year round.

The Greer tin mill at New Castle closed down Saturday night last after being in operation for over a year, throwing about 1,200 men out of work. The Shenango tin mill, the largest in the world, also owned by the United States Steel Corporation, is closed for repairs. An official of the American Sheet & Tin Plate Company stated this week that in three months he expected to see a number of the mills of the Steel Corporation shut down through lack of orders. This would include sheet and tin mills.

Railroads.

According to President McCrea, the Pennsylvania Railroad will not go ahead with the extensive improvements that had been planned for the Pennsylvania lines west on account of the present money stringency. Asked about intended improvements, President McCrea said: "There is no programme for that. For some reason investors feel such a lack of confidence in the situation that they appear unwilling to supply capital for developing railroads or other industries."

Miscellaneous.

Nashville has voted against establishing a municipal lighting plant.

The total number of immigrant aliens who arrived during September was 98,694, as compared with 95,341 for September, 1906, showing an increase of 3,353. The countries from which most of these prospective citizens came were as follows:

	1907	1906	*Inc.*
Austria	9,916	9,015	901
Hungary	10,713	10,281	432
Italy	19,316	19,342	*26
Germany	3,627	3,225	402
Greece	4,176	2,430	1,741
Russia	17,206	22,636	*5,430
United Kingdom	12,972	12,382	590
Japan	1,294	1,794	*500
British North America	3,911	1,674	237

* Decrease.

The total immigration from Europe was 89,447; the total from Asia, 2,991. The most interesting feature of the above table is the increased exodus from British North America. In the seven months ended with September 918,655 immigrants have been admitted to this country, presaging a record movement of about 1,500,000 persons for the current year.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade, crop and industrial reports are rather more irregular. Interest as to distributive trade has now largely passed from the wholesale and jobbing branches to retail trade, the development and proportions of which will be closely scrutinized from now on. So far the reports as to this line are conflicting, being best in parts of the northwest, southwest and south, and relatively slackest at the east, which needs sharp, cold weather for best activities. Jobbing business is fair as a whole, it being noted that house trade is rather quiet, while filling-in orders vary with sections reporting. The money stringency is an additional feature which attracts attention, affecting as it does the item of collections on past transactions. The weight of evidence, particularly from the larger cities, is that payments are not prompt, but it might be noted that quite a few cities report improvement this week, most of these being at the south. As to this item of collections, too, it may be said that holding of crops has been a subject of complaint from several points. Thus the country elevators in the northwest are reported well filled, and the southern producers are still holding cotton, the result being an increase of the strain always felt at crop-moving time. Special note is made of the effects of a strike on the levees at New Orleans checking the movement and shipments of cotton. There is still complaint also that the scarcity of commercial bills causes high prices for exchange.

The crop news of the week has not been favorable. Killing frosts are reported to have destroyed the probability of any important quantity of top crop in the northern half of the cotton belt, while the effect of frosts at the north will be to increase the quantity of soft corn beyond that of recent years. Additional unsettling features of the week have been the resumption of liquidation in the stock markets, the further quieting down of demand in the metal trades, and the cutting of prices of some lines of cotton bleached goods by western jobbers, which has led to unsettlement of feeling as to the permanency of present prices for these important products. The foreign demand for our cereals shows a falling off, this being due, it is claimed, as much to recent overbuying as to the advance of prices to the highest quotations in nearly three years, the net result being a slight loss on the week in wheat, corn and flour prices. That recent foreign buying has been good is shown by the current reports of exports of wheat and flour. Import trade is falling off from earlier heavy monthly records. The car-shortage trouble is reported still affecting the movement of grain, coal and lumber, but gross receipts tend to become more moderate, while net returns show a swallowing up of earlier gains in increased operating expenses.

Violent breaks in prices, led by the copper shares, with two suspensions of Stock Exchange houses, have been features in the New York share market this week. A reduction of the Amalgamated Copper Company dividend from an 8 to a 4 per cent. basis, a disastrous manipulation of United Copper—a curb stock—increased firmness in money, and apprehensions about the position of institutions, were among the leading unsettling factors. The bond market is again neglected, and prices are about the lowest of the year for leading active issues. Foreign exchange continues firm, the scarcity of commercial bills, particularly cotton drawings, being the object of much comment. Demand sterling is 4.86.30.

The features of the foreign trade returns for September are the shrinkage shown in the imports of merchandise as compared with the preceding month of August and the decrease shown both in leading lines of export (such as breadstuffs, cotton and provisions) and in all exports as compared with September a year ago. Thus imports in September were 15.5 per cent. smaller than those of August, though 3.6 per cent. larger than in September a year ago, while leading exports fell 6 per cent. behind September a year ago, and all exports were 2.2 per cent. smaller.

The feature this week in cotton goods has been the cutting of prices of a number of lines of bleached goods by leading western jobbers. This movement is criticised by New York houses and is variously explained. The net result has been an easing of asking prices by second hands, but wholesalers and mills claim that no reductions have been made. That the events of the week have had an unsettling effect upon the cotton goods market generally is freely admitted. Yarns are lower, with little new business developing.

Undiminished activity and strength are reported in the whiskey trade at all markets. Eastern ryes are active and Kentucky bourbon was never in better demand. At Cincinnati spirits have advanced to $1.35, this being the highest price for forty years. The advance is due to the increased cost of raw materials. Three weeks ago an advance of 2 cents a gallon was made, putting the basis to $1.34. At that time it was regarded as sufficient to cover advances being made in corn and malt, but since then these products have continued to go up, corn being quoted at 63 cents and malt at $1.25, with farmers holding the latter for a higher figure.

Favorable weather for the European beet-sugar crops has caused weakness abroad and sympathetic easing here, with raw sugar down 5 points. For refined sugar a steady hand-to-mouth demand continues, with no change in prices. Cautious buying of coffee continues and prices are slightly easier.

The leather trade shares the prevailing irregularity. Sole leather is steady and quite firm, as is most side leather, past curtailment having its effect, but patent leather is weak and glazed-kid stocks are large. The eastern shoe season has about ended, with shipments nearly 5 per cent. smaller than in 1906. Some orders, diverted from St. Louis by the strike there, are noted at the east, but in most of the western cities factories have reopened, and the strike, while not ended, is probably broken.

Some interesting results of the unsatisfactory harvest are coming to light. The short, light yield of oats has affected prices of that grain greatly. Increased feeding cost of all animals is a feature patent at present prices. In one dispatch to BRADSTREET'S it is brought out that the light weight of the grain makes it necessary to use an extra bushel of oats to make a barrel of oatmeal. It is also noted by leading papers that the weight of the loaf of bread to-day is smaller than a year ago by several ounces.

Business in iron and steel is very quiet, the week in most respects having been the dullest of the year, although a little more activity is witnessed in basic and Bessemer pig iron in the Pittsburgh district. The order placed for Bessemer was taken by an independent interest which had been engaged on foundry iron. In the east some furnaces are blowing out, and while stocks are reported accumulating at a few points, the quantity is not large. As matters now stand, it seems to be a foregone conclusion that full furnace capacity will not be operated throughout the winter. Prices, on the whole, are well maintained at recent declines, but it is felt that concessions would be forthcoming if any considerable tonnage should appear. However, the industry in general is very active on old orders. Business in steel rails is light, and demand for structural steel is small. Business in track supplies is dull, and quotations on spikes are more irregular. Steel billets are weaker, being quoted at $28 per ton in the Pittsburgh district, a decline of 50 cents from last week and of $1.50 from a month ago, which makes the quotation equal that of last year at this date. Plates are quiet, while concessions are being made on sheets. Tinplate production is being reduced. Steel bars are firm, but weakness has developed in iron bars at some points. Shipments of iron ore from the lake regions are heavy, so much so that there is now little fear of a shortage. Coke is firm and demand for spot supplies is good, but little business for future delivery is doing. Bituminous coal is active and prices on top grades are firmer. Old material is more active in the east, but trade, on the whole, is dull, and on some kinds of material prices are lower. Copper is again weaker, and more competition for small orders has developed. Lake copper for future delivery is quoted on the basis of 12¾ to 13 cents per pound, while the figures on electrolytic range from 12¼ to 12½ cents. Outputs have fallen off considerably and the price has been cut in half within the past five or six months, from which two facts some argue that business must soon develop. On the other hand, there are many who look for a lower level than 12 cents.

Bank clearings for the week ending October 17 aggregate $3,034,865,000, 11 per cent. over last week, but 9.5 per cent. below this week last year. Outside of New York exchanges amount to $1,256,502,000, a gain of 10 per cent. over last week and of 5.6 per cent. over the week last year.

Business failures for the week ending October 17 number 194, against 192 last week, 170 in the like week of 1906, 178 in 1905, 227 in 1904 and 216 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending October 17 aggregated 4,964,062 bushels, against 5,295,292 bushels last week, 4,931,841 bushels this week last year and 5,536,073 bushels in 1901. For the first sixteen weeks of the fiscal year the exports are 58,709,877 bushels, against 52,984,770 bushels in 1906-07 and 94,366,464 bushels in 1901-02. Corn exports for the week are 572,825 bushels, against 343,694 bushels last week and 1,319,036 bushels in 1906. For the fiscal year to date the exports are 15,944,811 bushels, against 11,821,827 bushels in 1906-07.

IN CANADA.

Canadian trade reports are of a good steady trade, of better than earlier expected wheat threshing returns in the northwest, and of good country trade. On the other hand, collections are still slow as a whole from the west, but these are expected to improve as the movement of wheat to market, now enlarging, becomes active. Prices of most staples, and particularly of farm produce, are very high, insuring a good return to the farmer, but there is, on the other hand, a tendency to both preach and practice conservatism, which bids fair to make for ultimately sound trade conditions. One peculiar feature of the very high range of certain prices is found in the butter trade. It is, for instance, stated that higher prices of butter have stopped export trade, and a little higher range would allow of Australian butter being imported. Tight money at Montreal makes its effects felt on trade and collections, and high prices of staples induce conservatism in buying. Imports of foreign iron and steel are decreasing. At Toronto, while money is tight and collections slow, the movement of wheat is expected to make for easier money in time. There is talk of easier prices for furs. At Winnipeg threshing reports are better than earlier anticipated, and grain is being rapidly marketed. Trade is good in British Columbia, despite tight money, and lumber is displaying more activity. Failures for the week number 36, as against 24 last week and 18 in this week a year ago. Clearings for the week aggregate $89,019,615, an increase of 3.5 per cent. over last week and a gain of 20 per cent. over this week a year ago.

TRADE REPORTS.

A good volume of business has been done at New York in dress goods and silks. Cottons have also been in steady demand. In woolens for men's wear and in some other departments the amount of business transacted is more moderate. Collections generally are reported fair, though there is not as much anticipating as in former seasons. In the clothing trade the business done has been fair, though not up to expectations. Cotton yarns are very uncertain, conditions changing almost daily. Prices are low, but manufacturers hesitate to buy, fearing prices may go lower. Some mills are curtailing their output and closing down rather than buy at present. Raw silk is slightly lower. Manufacturers of cloaks, suits and waists report a steadily increasing business, orders being principally from out of town and in excess of those received last year. Collections continue good. In the retail trade dealers say that the continued spell of fine weather has brought them more business than they expected. Firms manufacturing shirts, gloves and neckwear are all busy and seem to have as many orders as they can handle, the volume of sales in these lines being in excess of 1906. Collections are rather slow. Jobbers of hosiery and knit goods also report business satisfactory. Wholesale notions are fairly active, but collections are slow. Wholesale grocers say the tight money market is affecting the movement of trade just now, as very large deliveries of canned goods are held up awaiting adjustment as to payments. Retail business is active, especially in canned goods. Eggs declined 2 cents in face of heavy receipts, and large supplies have lowered butter 2 cents. Local requirements absorb all cheese offered. Flour receivers report satisfactory sales, jobbers buying with comparative freedom and prices being fully sustained. Prices of live stock are steady. Export trade in bicycles and sundries has fallen off, the United States being now last on the list of exporters. American hemp twine is in good demand, and manufacturers report business satisfactory and comparing favorably with that of last season. The cold weather has given some snap to anthracite coal, but movement both east and west is restricted by want of cars. Local trade is active, and stock on hand none too large. Leather is quiet, though there is a demand for heavy stock, and manufacturers of fancy leather goods, bags, etc., are buying more freely now than for some months past. The hide market is steady. The tobacco trade is unchanged. Stocks of Havana are low, prices high, and the crop outlook poor. Cigars are in fair demand, but collections are only fair. A normal business has been done in drugs and chemicals, and general conditions are good. Manufacturers of hardware and dealers in cutlery report orders only for small quantities and for immediate use; collections show no improvement. The same conditions exist in china and glassware trades, as well as in the tin, enameled and woodenware business. Manufacturers have now no trouble in filling orders for immediate delivery, while last year they would only accept them with the proviso that delivery was not to be made for six months. Copper prices are lower, and little business has been transacted. Pig iron is quiet, lead is inactive and weak, and pig tin is in poor demand, with prices lower. While structural steel manufacturers are working to nearly their full capacity, it is on orders already booked, new orders being few, and the present outlook indicates less activity in their line. Manufacturers of electrical goods are not so busy as they have been, but their chief complaint is of poor collections. In the machinery trade business is also quiet. The real-estate business is not so brisk as it should be at this season. Notwithstanding the apparent lack of demand, there is no noticeable falling off in prices, those obtained for two estates sold during the week being considered very satisfactory. General conditions in the lumber and building-material trades are unchanged. Prices are fairly firm, but collections are slow, with considerable renewal of paper. In the wholesale paper trade prices are steady and firm, but collections are very poor.

The following telegrams show trade conditions at the cities mentioned for the week ending October 18:

BOSTON.—Jobbing trade in dry goods is less active than in previous weeks. Retail trade has to

some extent improved owing to cool weather, but it is not yet brisk. Collections from retailers show some improvement. Both jobbers and retailers await with interest the results of retail business for the next six months. In the cotton-goods market demand has slackened owing to very high prices, and jobbers in general expect a lower level. Dress goods in some lines, especially broadcloths, are very active. Manufacturers of cloaks and suits are busy, but skirtmakers find trade dull. Wholesale millinery is only fair, not having developed as fully as was expected. Men's clothing and furnishing goods are active. Late orders for winter goods serve to keep factories going in a moderate way. Spring season cannot yet be judged by orders on hand. Reports from various parts of the country are conflicting, but there are many indications that buying of spring stock will follow on conservative lines. Patent leather and glazed kid are weak. Sole leathers are strong, and hides show greater firmness. Demand for drugs has been confined for the most part to orders for nearby wants. Dyes and tanning materials have been only moderately active. Bituminous coal is very active, and the supply is still short, best grades commanding high prices. Retailers have made another advance in the price of anthracite coal owing to increased cost of expense in running business, it is claimed. Paints, oils and painters' supplies of all kinds are in active demand. Linseed oil has advanced to 49 cents. Northern and eastern lumber is firmer. Southern lumber is improving in demand, and prices are steady. Western lumber and hardwood is quiet, prices showing little change. Trade in iron and metal is dull. Wholesale liquor dealers report a steady demand for all grades of liquors. There is an active demand for rectified whiskies. Trade appears to be in a fair condition, although credits are being closely watched. Leaf-tobacco dealers report good demand for leaf, and prices continue steady. Manufacturers are busy, and collections are fairly good. There has been a quiet and rather dull tone in the general provision market. Collections from the retail trade are reported rather slow, and jobbers are scrutinizing credits, market conditions affording but small profits.

PROVIDENCE.—Manufacturing jewelers are exceedingly busy, and many houses report more doing than last year. In the machinery and tool trade an excellent condition prevails, the only comment being that deliveries are slow. General fall business is of fair amount, but not up to the point some anticipated. Collections are slow.

PHILADELPHIA.—Trade is quiet in textiles so far as the raw material market is concerned, and there is little buying except for immediate wants. Jobbing trade is fair, but collections are slow. Retailers report good trade. Coal demand is active and prices are strong. Wholesale jobbers in chemicals and dyestuffs report a rather improved demand at firm prices. Paints and glass are active and prices rule steady. Wholesale lumber dealers report business somewhat draggy, but retailers say they are busy, though complain of slow collections. The leather market presents no new features the past week; trading is fair at steady prices. Hides and skins are not active. Goatskins are weak and quiet. Shoe dealers are fairly busy. Tobacco users are buying as little as they can get along with, looking for lower prices. Some packers, having loans maturing, shade prices to realize, but while they are few in number, it disturbs the market. The bulk of the holdings are in hands strong enough to hold for current or even higher figures, knowing that all domestic crops of 1907 are 25 to 50 per cent. short, and there are no old goods, except 1906, now being offered. There is little market for imported goods. Liquor distillers have been very active, the withdrawals from bond for the first half of this month equaling the average for the month. Collections by wholesalers are slow. Iron purchasing is almost entirely in small lots, the buyer providing only for immediate requirements. No business is being booked for next year. Prices are without change and steady, except for slight concessions on finished materials.

PITTSBURGH.—Continued quiet rules pig iron, and consumers are pursuing a waiting policy. While there have been no sales of Bessemer, it remains rather strong at $22, the figure at which the last sale was made. Some inquiries are being made for 1908 iron, but there is no buying. Basic iron is weaker, and several thousand tons have been sold at $19.75, valley furnace. A reduced tonnage of finished products in the way of new business continues, though there is no abatement of operations, old contracts being sufficient to keep the mills actively employed for some time. Coke continues firm, and the supply available for the balance of the year is limited. There has been no buying for 1908, as users are holding off for lower prices. Production and shipments are about normal at this time. Quotations for spot pig iron at the valley furnaces are as follows: Standard Bessemer, $22; chilled basic, $19.75 to $20; No. 2 foundry, $20.50, and gray forge, $20. Standard Connellsville furnace coke is quoted at $2.90 to $3, and foundry coke, $3.25 to $3 50, at the ovens. Business in builders' hardware is far in advance of the same period last year. Collections, in spots, are slow. Wholesale grocers report that, in spite of increases in prices of goods, orders are in excess of last year, but collections are slow. Store fixtures and butchers' supplies are in healthy condition, and collections are coming in promptly. Trade in millinery has been very large for the past three months, and exceeds last year's business. Payments have been prompt. Business in dry goods is larger than last year, considering the increase in prices, and collections are not very hard to make. The Greer and Shenango tin mills, Newcastle, Pa., and South Sharon, which have been closed for needed repairs, have been operated continuously for three years.

BUFFALO. — Trade is active, but collections are slow.

BALTIMORE.—Visitors in large numbers have been in attendance at the Home Coming celebration, and a fair volume of business has been done by jobbers in house trade, but retail trade has been moderate and manufacturers have felt the absence of labor in getting out fall shipments. Clothing manufacturers and shoe jobbers report increased orders from salesmen now on the road for spring. In dry goods and notions, owing to continued high prices, cautious buying continues. Collections in this line show a slight improvement on the whole, though from some sections of the cotton belt requests for additional thirty-days' time on settlements have been made. Jobbers in men's furnishings and knit goods report an increased demand, particularly in knit goods and gloves, due to favorable weather conditions, and also note an improvement in collections. Harness manufacturers report satisfactory collections, with a fair volume of new business. Jobbers of paper report prices unchanged from last week, and while out-of-town business continues satisfactory, local buying has been small. Jobbers of crockery and glassware report October collections below normal, but slightly improved over September. New business is being received in fair amounts. Cabinet hardware is active, business being well up to the normal, with collections coming in somewhat better than earlier. There has been a reduction of labor forces in some trades, brought about by some of the larger corporations exercising retrenchment in expenditures and postponing improvements. Ordering only for immediate needs is due to continued stringency in the money market and the high prices of materials. Demands on local financial institutions remain unabated, and banks are declining what in normal state of the money market would be desirable new business to a large amount. There is a continued feeling of confidence in all lines relative to general business which is slowly returning to a satisfactory state. An additional advance of 20 cents per barrel in flour is noted. An increased demand is found in canned goods, with short deliveries. In tobaccos Havana and Sumatra continue high, with moderate purchases. The Maryland leaf crop is nearly all in, with demand active, but with commoner grades easier.

CINCINNATI.—Seasonable weather continues, and trading at retail is of good volume. The market for wholesale dry-goods business is very good, with considerable improvement in collections over August and September. Business in hardware is about 15 per cent. better than last year, with large orders on hand for future delivery. Leather shows improvement over last fall. Trade in jewelry is very satisfactory, with collections fair. Shoe manufacturers continue to work full time, with orders plentiful. Groceries are steady. Lumber is fair. Collections are slow. Whiskey is active.

CHICAGO.—The feature in jobbing circles this week was the reduction of 1 to 1¼ cent per yard in prices of bleached and unbleached cottons by large jobbers. It has attracted attention all over the country. It is admitted that stocks are not large, and that sales at the reduction have not been heavy. It is the largest reduction in recent years. Business in a general way is fair, with reassorting sales of dry goods as well as forward business keeping up to a satisfactory volume. Clothing and shoes are selling about up to the average. Despite efforts of buyers to secure reduction in prices of pig iron, they are fairly maintained, with a moderate business in small lots. As one furnace man remarked: "Business would be larger were it not for the fears entertained for the future." Finished material is selling to a moderate extent, with the best business in structural shapes. Sales of wire and nails are satisfactory. Coal continues to sell freely, and a scarcity of cars prevents the free operating of many mines. More interest is developing in lumber, and yellow pine and hemlock prices are being shaded. Spirits have advanced to the highest price in thirty years. Groceries are having fair sale. Butter is lower, and eggs and potatoes are selling well, with the latter higher. Live stock is lower, with increased receipts of cattle and hogs and decreases in sheep. Money is firm. The south is calling on Chicago for increased assistance to move the cotton crop. Grain interests have made large loans until May at 7 per cent. Collections are fair in the aggregate, but many lines report slowness. Late corn has been hurt by recent killing frosts, and there is more soft corn over the belt than in recent years. Matured corn is being cut, but so far huskings are slow and yields irregular, there being many claims of disappointing yields throughout Illinois, Iowa and Nebraska. The movement of old corn has increased slightly, owing to advanced prices being paid, the highest in recent years. Seeding of winter wheat has made fair progress over most of the leading states, but drought has prevented the preparation of as large an acreage as anticipated, especially on land used for corn this year, as lateness of the corn in maturing has delayed preparing the land for wheat. The light weight of oats requires the use of one bushel more in making a barrel of oatmeal and reduces their value for feeding, a larger proportion being necessary to attain the regular results.

PEORIA.—Trade, as a rule, is satisfactory, but collections are only fair.

LOUISVILLE.—Business in manufacturing, wholesale and retail lines is good. Hat, clothing and skirt salesmen are out with spring samples, and houses report a very satisfactory volume of orders coming in. Fine Kentucky whiskey is in active demand at stiff prices. Banks are not making any new loans and have refused prime out-of-town commercial paper offered at 7 per cent. All the banks are caring for their local customers and are not calling any loans. Collections are improving.

ST. LOUIS.—In all jobbing lines house trade is exceptionally quiet, but filling-in orders are of good volume. Prices are well maintained. Traveling men write encouragingly and are also booking some good spring orders. All of the large shoe factories that have been closed down for several weeks opened for business last Wednesday. While the strike has not been declared off, many of the strikers returned to work. The factories are not running full capacity, but they are making shoes, and it is the concensus of opinion that the backbone of the strike is broken and within a few weeks all departments will be operating to full capacity. Lumber and building materials continue quiet, but hardware shows some improvement. Groceries, drugs and woodenware are active at firm prices. Seasonable weather has stimulated retail trade. Although it is not up to the volume expected it equals last year's at this period. Flour continues in good demand, both for domestic and export trade. Prices are firm, with an upward trend. The weather continues favorable for winter-wheat seeding, which is now practically completed. In many sections a larger acreage is being sown than for several years past. Money continues firm at 6 to 7 per cent. on short-time paper, and the demand is heavy. The banks and trust companies are taking care of all customers.

KANSAS CITY.—Trade in all wholesale lines is unusually good for the season, and orders for future delivery in dry goods and kindred lines show a healthy increase over last year. Collections range from fair to good and are better than a year ago at this time. Retail trade is active.

MILWAUKEE.—Jobbers report a good demand for seasonable goods, and retail lines are improving. Collections are fair.

SIOUX CITY.—Trade in leading jobbing lines is excellent. Retail trade would be improved by colder weather. Collections are good.

ST. PAUL. — Business continues to increase steadily. In all lines a healthy tone prevails. Current business as well as future is exceeding last year's. Collections have been good since the 10th instant and generally steady. Threshing has made good progress, and in some places it is finished, but ten days more of good weather is required in most localities. Wheat is not being marketed as rapidly as last year. Frequent fires have occurred of late in North Dakota. The drop in domestics is disparaged here and thought ill-timed and deemed ineffective to cause any general drop in prices.

MINNEAPOLIS.—Complaints of shortage of cars are numerous among grain men, and country elevators are filling rapidly, with less movement to centers than is desirable. In consequence collections are not what they ought to be. The movement of merchandise has not yet been materially affected, and jobbing houses generally report a satisfactory volume of trade. Lumber is quiet, though prices are well maintained.

DAVENPORT.—Trade, wholesale and retail, is fair. The weather is fair and warm. Collections are inclined to slowness. Demand for money continues strong.

OMAHA.—Exceptionally mild weather has retarded retail trade. Jobbers in leading lines report business quite active. Collections are normal.

LINCOLN.—Jobbers report a normal business. Collections are fairly good.

SIOUX FALLS.—Business and collections are good.

CHARLESTON. — Trade in all lines continues good. The cotton crop in this state is far above last year's, and maturing obligations are being paid promptly.

RICHMOND.—Business in nearly all distributing lines shows improvement. Especially is this true in produce and provisions, and in these lines prices show an upward tendency. Apples and pears are being marketed in large quantities, and for these prices are satisfactory. In southern Virginia and North Carolina sales of loose tobacco continue in large amounts, and prices are high for the better grades. In northern Virginia the crop has about been harvested. The corn crop is an average one, and continual favorable reports regarding the cotton crop are being received. Recent cool weather has given tone to retail trade, and collections show slight improvement. An active demand for money continues.

SAVANNAH.—Collections are slow to fair. Cotton is moving satisfactorily.

AUGUSTA.—Trade in all lines is active. Collections are improving.

ATLANTA.—Retail trade is very active, there being many visitors to the state fair now in session. Wholesale dry goods and millinery houses, in fact nearly all lines, report good business and collections improving. Farmers are receiving good prices for cotton. Frost has practically destroyed the top crop.

MACON.—Collections are good. Trade is active. The fields are white with cotton, but pickers are scarce and inefficient.

JACKSONVILLE.—Some improvement is noted in retail trade. Collections are slow, and banks have advanced interest rates about 1 per cent.

BIRMINGHAM.—Southern foundry pig iron No. 2 is quiet at $18@$18.50. Cool weather helps retail trade. Collections are about the average. Cotton shows more activity. Lumber continues quiet.

MOBILE.—Cool, fair weather stimulates wholesale and retail trade. Collections are fair, except from manufacturers of lumber. No improvement is anticipated in the lumber trade for the near future, and considerable depression is felt in this direction.

MONTGOMERY.—Wholesale dealers in groceries, dry goods and hardware report a satisfactory business. Retail trade is fair to good. Collections continue slow. Several light frosts during the past week damaged cotton to some extent and prospects for a top crop are very poor.

CHATTANOOGA.—Trade conditions, wholesale and retail, are good. Collections range from fair to good. Weather conditions are fair. Building activities continue.

MEMPHIS.—Wholesale business is good and retail is improving. Some jobbers report collections slow, others good. There are numerous complaints of car shortage delaying the movement of freight. Several sawmills have closed down on account of the inability of the railroads to deliver logs. The first killing frost occurred on October 12. The damage to cotton in the uplands was slight, but in the lowlands it is about 10 per cent.

NASHVILLE.—Reports regarding retail trade are favorable, and this is evidenced in better collections.

LITTLE ROCK.—Business, wholesale and retail, continues to hold up well, and collections are good. The cotton crop has been considerably

damaged by killing frosts, and the yield has been reduced to about 70 per cent. of a full crop. The weather is good for picking, but the movement is very slow.

NEW ORLEANS.—Retail trade is fair, but jobbers find business dull and collections are hard to make. The strike of laborers on the levee prevents the shipment of cotton and is increasing the strain on cotton factors and other interests. Crop conditions at the interior are still good.

DALLAS.—Jobbing trade is about normal for the season. Collections are quiet. City retail trade is excellent.

WACO.—Retail trade is very satisfactory. Wholesalers are not pushing sales, but giving special attention to collections, which are dragging. Cotton will all be picked in a short while.

SAN FRANCISCO.—Business continues very quiet. Collections are slow.

SEATTLE.—Trade continues good, especially in hardware and building lines. Sawmilling interests are still somewhat depressed, owing to the car shortage. Collections are good.

SPOKANE.—Wholesale trade is brisk. Collections are fair. The general outlook is good.

TACOMA.—Shingle mills will probably close down here for three months, beginning November 1. The car situation is, if anything, more acute.

PORTLAND, ORE.—Trade reports from all lines, excepting clothing and rubber goods, indicate a continued increase in volume. Collections are fair to good.

TORONTO.—Business men here do not speak of the outlook for trade as optimistically as they did a year ago, and they are inclined to both preach and practice caution in trade matters. Still, there is a feeling that conditions are sound and that adverse features have been pretty well discounted by wholesalers and retailers in all parts of the country. The retail movement is generally reported as good, but collections from most districts are still slow. Farmers, however, are receiving very high prices for all products, and western and Ontario grain is being marketed rapidly. There is, therefore, a decided expectation that money will gradually work easier than it now is. The wholesale movement is good, and large shipments of goods are being made in all directions. There is a heavy business in water freights, which will continue until the close of navigation. It was expected that high prices would tend to lessen business in dry goods, but so far there has been very little evidence of this. Reorders for general lines are quite heavy, and a particularly heavy business has been done in hosiery and underwear. Textiles hold firm and deliveries in many lines continue slow. Woolens are in good demand. Furs are doing well, but there is some talk of easier prices. Wholesale trade in carpets is now quite heavy. Prices are inclining upward. Groceries are moving briskly. A feature is the high prices at which cereals are holding. With oats away up, oatmeal is likely to be dearer. Canned goods are in good demand and hold firm. Sugar is active and firm, and dried fruits are going higher. The hardware trade is active, with shipments of heavy goods large. There is a fair country trade doing. Receipts of produce here and at country points continue light, with prices firm. Hides are about steady, although the expectation favors easier prices. Wools are quiet and steady.

MONTREAL.—The trade situation here has shown little change during the past week. Tight money is the dominant feature of conditions, and this contingency is making itself felt more or less in all branches of business. Collections are still slow, with some reports of improvement in the west. The volume of local wholesale and retail trade is good in most lines. The shipping trade here has had a good year. Import business was particularly heavy, while exports showed some falling off. Seasonable dry goods meet with a good demand. Values maintain their high quotations, and while buyers are generally conservative in their operations, there is a very good business moving. Deliveries of cottons are still slow, and it is said that, owing to the impossibility of relying on Canadian mills, large orders are being placed for English goods. All lines of hardware are moving briskly. General shelf goods are in active demand. Importers of iron and steel are reported to be receiving rather smaller shipments than formerly. It is said they expect less activity in manufacturers' operations. One report says that implement manufacturers are reducing their output. Groceries are moving well. Canned goods, teas and sugars hold very firm. Country trade continues quiet. Butter prices have again advanced and there is no export business done. Should quotations go but a little higher than they now are, it would be possible to import Australian butter into this market. Cheese is higher and still firm, with an excellent export demand. Flour is also quoted higher. Exports of grain are large.

VANCOUVER-VICTORIA.—Despite scarcity of money there is a good tone to general business along the Pacific coast. Collections are fairly good, and wholesale and retail lines are moving well. Values are generally firm, particularly those of farm products. Retail trade is good, and there is a corresponding demand for wholesale lines. The lumber trade is showing more activity, and mining conditions are improving weekly. It is announced that next year will see considerable railway extension throughout the province. Collections are fair to good.

WINNIPEG.—The most talked of feature here is the satisfactory threshing returns coming in. They show a larger percentage of first-class wheat than expected. Grain is rapidly being marketed, more so than at this time last year, and a pronounced improvement in collections is looked for at an early date. The speculative element in business has been very much quieted by the tightness of money, and this also should help collections. General business is moving fairly well. Sorting orders in fall lines are coming in, and a good winter is looked for. Western cattle shipped for export show excellent quality, but there will likely be a considerable decrease in the number shipped. Improvement in retail trade is reported in many directions.

FINANCIAL.

Money Market.

There was a slightly firmer tone in the loan market at New York this week, due in part to the stock market flurry, the call money rate rising to 7 per cent., while renewals advanced from 4½ to 6 per cent. At the same time the offerings of money on time were more restricted, and 7 to 6½ per cent. was asked for three months' loans, there being a fair inquiry for such accommodation. The favorable result of the Clearing House committee's examination of the Mercantile National Bank had a good effect on sentiment in connection with the money market. At the same time attention is being given to the alleged tendency of cotton growers to hold it for higher prices, which not only delays the marketing of the crop and tends to keep foreign exchange abnormally high, but ties up considerable money at the south. This circumstance, it is claimed, makes the increase of the Treasury deposits less effectual, and is a powerful influence in causing the maintenance of high rates for money. Commercial paper is very dull, with small offerings and only a very limited buying demand, the rates being 7½ @7 per cent. for double names.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending October 17 shows an aggregate of $3,034,865,000, as against $2,721,039,000 last week and $3,354,305,000 in the corresponding week last year. Canadian clearings for the week aggregate $89,019,000, as against $85,968,000 last week and $74,053,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	October 17	*Inc.*	*Dec.*	*October 10*

New York Banks.

Owing to the liquidation in the stock market, last Saturday's New York bank statement exhibited a decrease of $5,666,500 in the loans, the decrease in cash, which was $656,500, agreeing very closely with the estimated actual loss of money for the week. The decrease in the average deposits, which was $10,655,500, was, however, very greatly in excess of the aggregate losses in loans and in cash, so that the statement in this respect appeared to be out of keeping with the actual facts of the case. As this, however, resulted in a reduction of $2,663,875 in the amount of reserve required, the surplus reserve increased no less than $2,007,375, making the statement on its face a favorable one. The figures compare as follows with those of the preceding week:

	Oct. 12	*Oct. 5*	*Changes*
Loans	$1,083,401,900	$1,089,068,400	D. $5,666,500
Specie	198,558,800	192,216,700	I. 6,342,100
Legal tenders	62,608,600	69,607,200	D. 6,998,600

Foreign Exchange.

While decreased activity was shown in the foreign exchange market at New York during the present week, its tone continued to be steady to strong. In the early days of the week there was, in fact, a rather firm feeling, and the principal factor was again the comparative scarcity of offerings of commercial bills. The inquiry for remittances was not, however, on so large a scale, and toward the middle of the week the quotations for actual demand sterling eased off by about 10 points, the market assuming a somewhat dull appearance. Posted rates remained unchanged at 4.83@4.87, and the range of quotations for actual demand sterling was between 4.86.20 and 4.86.40.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.25 @ 4.82.50	4.82.60 @ 4.82.65	4.82.50 @ 4.82.65	4.82.40 @ 4.82.60	4.82.35 @ 4.82.50	4.82.20 @ 4.82.30

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.90; commercial bills, 4.81¼ @4.82½; francs, 5.20⅛ @ 5.16⅞ less 1-32; reichsmarks, 94@94 15-16 less 1-32.

The Bank of England's discount rate remains at 4½ per cent. Its weekly statement on Thursday was a favorable one, exhibiting a decrease of £574,927 in gold, but the loans showed a reduction of £2,325,000, and the proportion of reserve to liability rose from 46.51 per cent. to 49 39 per cent. In the London open market call money is 2¾ @3 per cent. and discount is 4¼ @4⅜ per cent. The Bank of France this week gained 750,000 francs in gold and increased its loans by 47,675,000 francs. Its rate is still 3½ per cent, the Paris market quotation being also 3½ per cent. At Berlin the bank rate is 5½ per cent. and the market 4⅞ per cent.

The course of the silver market for the past eighteen years is exhibited in the following tabulated form, giving the high and low figures by years from 1890 to 1907, inclusive:

LONDON SILVER PRICES.

	High	Low		High	Low
1890	54⅝d.	43⅝d.	1899	29⅝d.	26⅝d.
1891	48¾	43½	1900	30 3-16	27

1898	28 5-16	25	1907	30½	27⅞

New York Securities Market.

At the outset of the week there was not a little apprehension regarding the position of some speculative interests, and in spite of the favorable bank statement on last Saturday, prices on that day showed a considerable decline. In the opening days of the week covering of shorts caused a rallying tendency to assert itself. By Tuesday evening the remarkable behavior of United Copper attracted attention, the common stock of that company being forced up from around 35 to 60. On the following day there was a fall in United Copper to 20, and the failure of a Stock Exchange firm—Gross & Kleeberg—which had been conducting the manipulation, was announced. At the same time the general stock list developed extensive liquidation in all directions, resulting in a general decline, with the lowest quotations for the year in the greater part of the active stocks. There was naturally a crop of rumors about institutions and individuals, though the principal attention in this connection was given to the position of the Heinze interest and its banking connections. On Thursday morning the break continued for a time, still lower figures being in some cases reached, while on the curb United Copper fell to as low as 10. Announcement was later made that the Heinze stock firm had been suspended. These developments, together with more or less definite assurances that the unsoundness did not extend further, had a steadying effect upon the market, moderate rallies occurring in the active issues, and even the announcement of the reduction in the Amalgamated Copper dividend from 8 per cent. to 4 per cent. per annum had only a temporary effect. The improvement continued during the early trading on Friday, and was helped by an announcement that the Clearing House committee, after examining the Mercantile National Bank, had pronounced it sound, though in the later part of the day prices broke once more with some violence, and it was apparent that liquidation of loans on a large scale had again been in progress.

While the above were the principal factors affecting the position and action of the stock market, money continued to play a part in determining the course of sentiment. The rates for both call and time money were somewhat firmer, and attention is being directed to the unusual strength of foreign exchange for this period of the year. This is declared to be the result of scarcity of commercial bills, which are sparingly offered. It is further held that this is caused by the disposition of holders of cotton to keep it out of the market in the expectation of higher prices for the staple, and that, furthermore, large amounts of money are tied up in this way, which tends to prevent the funds sent to the south for crop-moving purposes from returning to the northern centers. Another circumstance which has had not a little influence during the week was the further reduction in the selling prices for metal copper, and additional announcements that other producers are following the lead of the Amalgamated in cutting down production. It was on this, as much as on the expected dividend reduction, that Amalgamated Copper fell to below 50 early in the week, with a decidedly disturbing effect upon American Smelting and allied issues, and in the further break on Friday Amalgamated dropped to 44½ and was again a disturbing factor. The long-drawn contest at Chicago between the Fish and Harriman parties for supremacy in the Illinois Central hardly ranked as a speculative factor. The charges that the Southern Pacific Company was still rebating were, however, subjects of much discussion, and, as usual, the Harriman group continued to rank among the most active features of the list, showing decided weakness in Friday's market.

Boston Stock Market.

Boston Shoe and Leather Market.

Leather dealers do not expect new life to come into the leather market until after November 1. Sales of patent side leather are certainly considerably less than a year ago at this time, and the glazed-kid market is under pressure to liquidate accumulated stocks. Sole and side leather manufacturers have curtailed production and saved their market, so that prices are firm, particularly for sole leather. Prices have been cut several times in the last six months on satin and kangaroo grains. Hide dealers are taking a stronger view of the future, but buying has been limited to immediate wants. Information bearing on the future of the shoe trade is somewhat conflicting. The past season is approximately closed, and shipments for the year thus far are about 196,000 cases, or 4.8 per cent., short of the same period last year. Salesmen report from some sections that retailers are well stocked with goods bought at top prices and carried over from last year, while from other sections the opposite is said to be true. One indication points to a continued slow trade for another six months; the other encourages manufacturers to expect a decided improvement as soon as the season approaches where orders must be placed. In the meantime the St. Louis strike has forced some business east, but other orders received on urgent calls for shipment keep factories only fairly employed. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 96,529 cases; preceding week, 91,252; last year, 99,570; total for 1907, 3,855,125; total for 1906, 4,051,068; decrease, 195,943.

Wool Markets.

Strength and activity still continue to mark the wool situation, the condition of the market being very healthy, with an optimistic feeling prevailing. Recent large sales here and the extreme strength abroad are the main factors, but the sales of the past week have been above the average. Dealers are expressing confidence that all wools in stock will be wanted at full prices, and the tendency of quotations on desirable grades is continually upward. There is a better demand for clothing wools, territories being the most active. Montana and Wyoming half blood in the original bags sold during the week at 26½ cents, with Montana fine, mostly half blood, at 25½@26½ cents in the original bags. Some half and three-eighths blood Montana, in the original bags, brought 24½@26 cents, with graded half blood, running to staple, at 26½ cents. Montana fine clothing sold in fair volume at 24 cents, with Wyoming and Idaho fairly active at 21½@22 cents. Quarter blood territories sold more freely, but buyers are waiting for the opening of the heavy-weight goods season. The new Texas wools are being shorn, but the only sales in this market have been small lots of eight months at 21@23 cents. Fleeces are in much improved demand, but some desirable grades, such as half bloods and delaines, are sold up. About 50,000 pounds three-eighths blood Ohio sold at 33½ cents, XX Ohio at 35 cents, fine unwashed clothing at 27@28 cents, and unmerchantable at 29@30 cents. Fine washed delaines sold at 38½@39 cents, fine unwashed and unmerchantable bringing 31@33 cents, with small offerings. Quarter blood fleeces were in better demand at 30½@31 cents for Ohio and 30 cents for Michigan, sales being moderate. Missouri quarters sold at 29@29½ cents, with Indiana and Wisconsin at 29½@30 cents. Michigan fine unwashed brought 25 cents, and Ohio No. 1 40@41 cents. There were good sales of Oregon staple at 23½ cents, with moderate lots of valley at 25@26 cents for No. 1 and No. 3 and 27@28 cents for No. 2. California wools are quiet, but more sampling is being done. Pulled wools are in steady demand. Foreign markets are strong and advanced on grades suitable for this country. In Melbourne prices are fully sustained, with an advance of 5@10 per cent. on some grades since the opening. French, English and German buyers have purchased freely, with Americans free bidders, at prices which are very high in comparison with the same grades of domestic wools. The Geelong sales will open October 24, and the next London sales will open November 26, when it is expected that more wools suitable for this country will be offered. In this market one lot of Australian 50s to 56s was sold at 40@42 cents, but otherwise foreign wools are very quiet, as stocks of desirable grades are very small.

HOW WASTES AND BY-PRODUCTS ARE MADE VALUABLE TO TRADE.

In the *Technical World Magazine* for September, William R. Stewart discusses the economies of industry. The United States has long been prodigally wasteful of left-over products which European manufacturers have long been utilizing in various forms. Germany, the writer shows, is one of the industrial marvels of the century. So scientific has manufacturing become that almost nothing is wasted which can by any means be made to have a value. Mr. Stewart says: "The utilization of so-called wastes may be considered under various heads, according to the processes from which they are derived. The iron and steel industry furnishes a large number of them. Within the last few years the economic use of slag, or refuse, from mines and furnaces has been greatly developed. Very good glass is now made from this slag, as well as paving blocks and bricks, artificial porphyry, and a cement which is equal to the best Portland cement. Ground with 6 per cent. of slaked lime, building mortar is also made from slag; and ornamental copings and moldings, window sills and chimney pieces are fashioned from it.

"Good bricks can be made from granulated slag mixed with dust from slag, though the hardening process is rather slow. Slag is also used for steam-pipe and boiler wrappings. Several slag-cement factories are in operation in the United States, and all are said to be in a prosperous condition. The utilization of the waste gases of blast furnaces for working gas engines has been carried to a considerable length in Germany, and is also being developed in this country. Efforts to fire furnaces with slack or coal dust, by means of highly heated fire chambers, have likewise been successful in Germany.

"Lumber and timber products contribute a large number of utilizable wastes. Sawdust, which formerly was burned or allowed to float down the streams and choke up the channels, furnishes a good example. Indeed, by combining the use of the hydraulic press and the application of intense heat, it has been found possible to give to sawdust a value in the manufacture of a certain kind of furniture far above that of the solid wood. This artificial woodwork is known as bois durci—hardened wood—and is capable of being molded into any shape and of receiving a most brilliant polish. In Norway, acetic acid wood, wood naphtha and tar are made from sawdust by distillation. Charcoal briquettes are made in large quantities in the same country. Alcohol can be obtained in paying quantities from either coarse or fine sawdust. The collection and disposition of sawdust for a variety of common purposes form a considerable industry in many cities. In New York City, for example, there are some five hundred sawdust vendors having a capital of about $200,000, and doing a business of more than $2,000,000 a year.

"From the great slaughterhouses of Chicago, Kansas City and elsewhere come a multitude of by-products which have a commercial value. The reason may not be obvious to a layman why the products of the gray brain matter of calves should be used in the treatment of various human nervous disorders, but the fact is that they are. Among the nervous affections to which the calf's brain contributes a treatment are neurasthenia, agoraphobia, chorea, St. Vitus's dance and psychosis. A list of the slaughterhouse by-products which are now utilized for commercial purposes includes hair, bristles, blood, bones, horns, hoofs, glands and membranes—from which are obtained pepsin, thymus, throids, pancreatin, parotid substances and suprarenal capsules—gelatin, glue, fertilizers, hides, skins, wool, intestines, neat's-foot oil, soap stock, glycerin from tallow, Brewer's isinglass, and albumen. Albumen is obtained from the blood of the slaughtered animals, and is used by calico printers, tanners, sugar refiners and others. From the bones of the feet of cattle are made the handles of toothbrushes and knives, chessmen, and generally almost every article for which ivory is suitable.

"Even without chemical change, many articles once profligately cast away are now being made to serve useful purposes. Broken and worn stuff from the bench, broken pieces of grindstone, old pipes, etc., are more and more being regarded as having only half performed their services, and in a hundred different forms are made still to contribute to the satisfaction of human needs. Worn-out files may make turning tools, scrapers and burnishers, while the steel by forging down may be utilized in almost any way. When a grindstone is worn to a small diameter it can be turned in a lathe into grooves for grinding paring gouges. A few elbows, tees and bends, applied to iron gas-piping, which formerly was given away, will construct many things—excellent hand-rails to steps, or fencing for gardens, or supports for shelves or tables."

SHIPBUILDING.

The Bureau of the Census has published a report on shipbuilding. The statistics included in this bulletin, which is a part of the census of manufactures of 1905, cover the calendar year 1904, with the exception of the data for Michigan, which relate to the year ending June 30, 1904.

According to these statistics 1,097 establishments, exclusive of those conducted by the government, were engaged in iron and steel or wooden shipbuilding. The combined capital of these establishments was $121,623,700. They employed, on an average, 50,754 wage earners, paid $29,241,087 in wages, used materials costing $37,463,179, and manufactured products which, including repair work, were valued at $82,769,239.

A comparison of these figures with those for the census of 1850 shows that the industry has made remarkable progress. Although the number of establishments has not increased materially, the capital invested has increased twenty-one fold and the value of the product nearly fourfold. In 1880 the 2,188 establishments involved an investment of $20,979,874, and, including repair work, gave an output of $36,800,327. Twenty-five years later nearly six times the amount of capital, $121,623,700, invested in about one-half the number of establishments, 1,097, gave an output valued at $82,769,239.

In 1905 no less than 83 5 per cent. of the entire shipbuilding capital of the country was invested in iron and steel construction, as against 77.4 per cent. for 1900. Of the total number of private establishments reported in 1905, on the other hand, 95.1 per cent. were engaged in wooden construction work, for of the entire number of shipbuilding establishments not under governmental control only fifty-four were devoted to iron and steel construction, while 1,043 were credited to wooden construction. For 1900 the relative position of the two branches was nearly the same, as the number of establishments was forty-four for iron and steel and 1,063 for wood. The majority of the establishments engaged in iron and steel construction are of great size and require costly and expensive equipment, while most of those engaged in wooden construction are small yards, which perform minor repairs on small vessels and turn out wooden vessels of comparatively light tonnage.

Within the last fifteen years the increasing importance of iron and steel in shipbuilding has been especially marked. As an item of expense in 1890 the cost of iron and steel was less important than the cost of lumber, but in 1905 the cost of the former constituted 41.2 per cent. and the cost of the latter only 17.9 per cent. of the amount paid for materials.

In 1880 the value of the work done on wooden vessels of five tons and over was nearly three times as great as the value of work done on iron and steel vessels of the same class. For 1905 conditions were practically reversed, for the value of iron and steel work was nearly four times that of wood.

The value of "iron and steel construction" was $43,395,704 and of "wooden construction" $9,724,231; the total, $82,769,239, being completed

by an output of $3,001,292 from "small boats under five tons," $22,829,040 from repair work, and $3,818,972 from "all other products."

Both in the capital invested and value of products New York and Pennsylvania have always been among the leading states. Virginia has made the most striking progress. Since 1880 this state has risen from twenty-second to third rank in value of products and from seventeenth to first rank in capital invested. California and Washington led on the Pacific coast and Ohio and Michigan in the Great Lakes region.

Nearly three-fourths of the aggregate value of products of the shipbuilding industry was produced in the Atlantic and gulf district. Although there was a greater number of establishments in the Great Lakes district than on the Pacific coast, the value of the output of the latter was greater from the fact that on the Great Lakes many small establishments exist because of the market there for small boats.

An increasing navy has compelled the government to equip the navy yards adequately for the repair work which necessarily results from the large number of vessels now continually in commission. Government yards have also undertaken the construction of the largest types of warships. As a result, the value of products of the government establishments increased from $11,022,312 for 1900 to $17,265,469 for 1905, or 56.6 per cent.

Although the number of vessels of five tons and over launched during 1904 was less by 167 than the number launched in 1880, the tonnage had increased 40.5 per cent. during the period, and the average tonnage of the vessels launched, 50.9 per cent. The average value of the 2,415 vessels launched in 1880 was $7,961, whereas in 1905 the average value of the 2,248 vessels was $32,683. Of the total net tonnage launched for the merchant marine during 1904, 67.9 per cent. was destined for the lake and river traffic. There is little building for foreign trade. Of the total net tonnage launched for the merchant service, only 5.2 per cent. was destined for foreign trade.

Of the total net tonnage of merchant vessels launched during 1904, 64.8 per cent. was built in the shipyards of the New England states and New York, New Jersey and Pennsylvania, and of the production of these states 59.6 per cent. was intended for the lake and river trade.

The shipyards in the Atlantic and gulf district launched vessels which aggregated a greater tonnage and value than the combined output of the shipyards in the other districts. With reference to the value of ships of five tons and over launched by private shipyards in 1900, Pennsylvania, Maine, Virginia and New York led, in the order named. Michigan, for the Great Lakes, followed, with California sixth. Five years later Pennsylvania and Virginia still held first and third places respectively, but California had risen to second place; Massachusetts supplanted New York in fourth place; Maine dropped to fifth, while the state of Washington rose from eleventh to sixth place. As a rule, the rank for steel vessels closely approximates the rank for all classes and governs the relative position of the state in shipbuilding.

The 311 vessels of five tons and over with motive power other than steam launched during 1904 had an average gross tonnage of not quite ten and one-half tons and an average value of about $1,541. In the construction of this class of vessels New York led with reference to tonnage and value, but California launched the greatest number.

Pleasure boats, fishing boats with internal combustion engines, and steel barges are being produced to a greater extent than formerly, while the building of sail vessels is decreasing. Vessels of the latter class, chiefly built in Maine, aggregated a value of $4,210,228 in 1900, but this figure dropped to $3,620,119 in 1905. Canal-boat building has decreased since 1880 at the rate of 50 per cent. or more at each census period. Small boats, vessels of less than five gross tons, are more in demand than in the past. The value reported increased 52.4 per cent. from 1900 to 1905, 41.4 per cent. from 1890 to 1900, and 58.7 per cent. from 1880 to 1890. The number of boats put out by carpenters and others not regularly engaged in the work would largely increase this evident advance in this branch of the industry.

Of the 1,097 private shipyards reported in 1905, 388, or 35.4 per cent., were credited with 77.3 per cent. of the total value of ship repairs reported by all establishments.

Two-thirds of the dry docks are situated in the north Atlantic states. New York alone had over one-third of the entire number. New Jersey, second in importance in this respect, had as many dry docks as the entire north central division. The south Atlantic states had eighteen dry docks, the north central states twenty-three, and the western states only seven.

More than one-half of the 413 marine railways reported for 1905 were situated in the north Atlantic states. New York had one-fourth. New Jersey, second in total lifting capacity, was behind both Connecticut and Massachusetts, with reference to the number of marine railways.

Of the total number of shipbuilding establishments, 55.7 per cent. used power in 1905, as compared with 38.2 per cent. in 1900. All of the iron and steel and more than one-half the wooden construction establishments used power for 1905. The absolute increase in the use of power for 1905 over 1900 was 25,441 horse power, representing an increase of 50.1 per cent. for iron and steel shipbuilding and repair plants and 14 per cent. for wooden ship construction and repair. Of the total horse power reported in 1905, 74.2 per cent. represented steam engines which were owned. Steam engines of this class increased 26.6 per cent. in number and 24 per cent. in horse power in the five-year period. The use of gas engines has increased materially, while fewer water wheels are used. The increase in the electric horse power used was no less than 146.1 per cent., and, in fact, electricity has become almost essential in the equipment of a modern shipbuilding plant.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 26, 1907.

While all the effects of the disturbance through which the New York financial community has just passed may not as yet have entirely spent themselves, the feeling seems to be general among those best qualified to judge that a crisis has been weathered which at times threatened to assume larger proportions and to take on a more acute phase than have been reached. The situation has been handled with marked steadiness and with a degree of skill and resourcefulness which reflect high credit upon those mainly responsible for the outcome. The immediate need of the situation is that the general public should second the efforts of those who have pointed out the path of safety, and avoiding hysterics and sensationalism, labor to maintain an equal mind, to prevent the spread of undue distrust, and to hold the current of affairs to a normal course.

Now that the second Peace Conference has concluded its work, there is no reason for withholding from the public the instructions given to the United States delegates at the end of May, and the State Department has authorized their publication. A glance at them cannot fail to throw into strong relief the soberness and poise which have ruled the State Department councils. In his instructions Secretary Root said that in the discussions upon every question it was important to remember that the object of the conference was an agreement and not compulsion, and that it was no less important that the agreements reached should be genuine and not reluctant. So he told the delegates that they should regard the work of the conference not merely with reference to the definite results to be reached in the conference, but also with reference to the foundations which might be laid for further results in future conferences. It might well be, the Secretary pointed out with statesmanlike forecast, that among the most valuable services rendered to civilization by the second conference would be found the progress made in matters upon which the delegates reached no definite agreement.

In his address opening the conference on trusts of the Civic Federation at Chicago this week, President Nicholas Murray Butler laid stress on the fact that our constitutional limitations, our political traditions and past party differences, and the complex structure of our whole governmental system, with its state and national agencies, make the problem of corporation control an extremely difficult one. He believes that we shall work out a just solution of the problems involved, not at one stroke or by wholly logical processes, but step by step and after many experiments. He suggested that the time has come when the Sherman act should be amended in order to relieve not corporations, but the people from limitations upon their business activity which that act imposes. In his opinion the law unduly exalts the principle of competition and fails to lay due emphasis upon the benefits which may follow from properly regulated and supervised coöperation. President Butler's address embodied a word of warning which doubtless fell upon receptive ears. We must have a care, he said, that we so speak and act as not to disturb that faith which civilized man has in his fellows and upon which rests the whole enormous structure of our credit system. Destroy that, he added, and there will not be many public service corporations left to regulate for some time to come.

Problems arising out of the administration of the immigration laws have formed the subject of a conference at Washington at which Secretary Straus has endeavored at once to elicit information and to suggest ways and means for the removal of difficulties. The steamship companies who were represented in the conference on Tuesday complained of having not only to return idiotic and insane aliens who are refused admission, but to bear the expense of attendants to accompany such aliens on their return. So the companies complained of the admission of stowaways on the same examination as other aliens, thus putting a premium on a practice going directly to a curtailment of their revenues. Another problem related to the failure to return the head tax to immigrants. One outcome of the conference was the appointment of a committee to take under consideration the principal difficulties disclosed under the operation of the law and to suggest remedies. One point of special interest to be noted in connection with this matter is that the Department of Commerce and Labor will shortly establish at New York a branch office of the division of information, which is engaged in an effort to divert immigration from the large industrial centers. Branches of this division will in the near future be established not only at the seaports, but in the large industrial cities, whose chief function will be to supply labor where it is most needed.

It is possible that the Panama canal may once more furnish a subject of debate in Congress owing to a new phase of the situation which has recently developed. The suggestion appears to have been made by engineer officers who came to Washington lately from the isthmus that the canal locks should be widened to meet naval exigencies, and while it is not officially said that they have been instructed by the Canal Commission to lay these recommendations before the authorities at Washington, it is believed that they represent the views of the commission itself. The increase in the size of steamships, as illustrated in some notable recent instances, is doubtless responsible for the suggestion for a modification of the plans for the locks in the direction indicated, and the commission may feel that the change, if one is to be made, should be decided upon before the work is progressed any further. The suggested change will, of course, involve additional expense, which may thus lead to a reopening of the question in Congress.

A pretty even balance has been maintained between Treasury receipts and expenditures during the month. The small excess of expenditures with which the month began has been somewhat reduced. At the close of business on Thursday the expenditures for the portion of the fiscal year which had elapsed amounted to a little over $215,900,000 and the receipts to a little over $212,000,000, leaving the expenditures about $3,800,000 in excess of the receipts. It seems unlikely that this balance will be very much disturbed in the interval before Congress meets, a fact which will not be greatly regretted by those who have noted how the disposition of legislators is affected by the presence of a large surplus.

Some words of sound advice on the subject of the Philippines were contributed by Commissioner Draper, of the New York Education Department, to the discussions of the Lake Mohonk Conference this week. Referring to the small proportion of the population voting at the first general election for a popular assembly, he said that if the circumstance was not wholly discouraging it certainly admonished the United States to hesitate about going further at once or about making promises. Commissioner Draper expressed the opinion that the adaptation of schools to the needs of the people was likely to be a much more difficult matter than many would suppose. In his opinion, we would do well to encourage young Filipinos to be workmen rather than lawyers, doctors or engineers. So simple industries which would contribute to better living should be encouraged through better implements and improved methods, and other industries which will develop markets must be ascertained and methodically introduced by government action, and if need be by liberal government aid. On the other hand, a tariff against insular products for the real purpose of affording superior profits to home industries that are no longer in their infancy is abhorrent to the good conscience and overwhelming opinion of the American people. There is much sense in trusting to economic rather than political influences in uplifting our wards in the Pacific.

Advices from Russia indicate that the parliamentary elections are now sufficiently far advanced to show that the forthcoming Duma will be decidedly conservative in composition—a result long ago forecast on the basis of the changed conditions as regards the electorate. What are classed as the Moderate and Right parties will, it has been said, have more than 280 members in the next House, while the Constitutional Democrats, so strong in the first Duma, will have not more than about 100 members. The members of the Extreme Left will not, it is thought, number more than fifty, so that those two elements, even if combined, would be forced to play a subordinate rôle. The more extreme members will, it is believed, be inclined to adopt much less belligerent tactics than those pursued by them in previous gatherings, for the reason that the threat of expulsion for over-demonstrative conduct hangs over their heads. Another point of interest is that the new parliament will be a body of comparatively new men, only 131 members of former parliaments having been chosen in the preliminary elections, and less than one-sixth of these are expected to win in the final balloting. Speaking generally, great progress has been made in the pacification of the country during the last few months.

While there was a decrease of 18,600 in the number of pensioners on the rolls at the end of the fiscal year 1907, as compared with the year before, it appears that the total expenditure for pensions was in excess of that for the year before. The total number of pensioners on the rolls at the end of the fiscal year was 967,371, and the total amount of pensions was $140,850,880. This was greater by $4,613,131 than the amount for the year preceding, an increase accounted for by the higher rate of pensions provided for by the act of February, 1907, under which there had been enrolled by the end of June 116,239 pensioners. Up to that time the total number of pensioners on account of the war with Spain amounted to 24,077.

THE NEW YORK BANK COMPLICATIONS.

A decidedly critical situation in bank affairs at the metropolis has again been taken in charge and, to all appearances, successfully met by the Clearing House Association, acting through its committee. To accomplish this, drastic action was found necessary, and the spectacle has been furnished of wholesale retirements and practically enforced resignations of directors and officers of the banks involved in the matter. As a result, however, of such a course, the position, so far as the Clearing House banks at New York is concerned, is generally regarded as having been rendered far sounder than it was, while the separation of certain individuals and interests from active participation in banking at New York is looked on as removing a constant source of danger and a menace to the security of the financial community. Nor was this an entirely new matter. For some time past conservative bankers have shown little concealment of their disapprobation and even anxiety concerning the course of certain comparatively new interests which had entered the New York banking field upon a large scale, their policy being to create so-called chains of institutions, closely allied through stock ownership by the different elements, which were in most cases associated in the directorates of the banks in question. It is also very generally believed that the control or substantial holdings of such bank stocks was secured in some if not all cases by loans made to the operators in question from their own banks, with the stock of other banks as collateral. Moreover, the parties in question were identified with the promotion of various industrial and other enterprises requiring strong support from banking quarters, and to which assistance such as the chain of banks could afford was a vital necessity. Hence the dangerous nature of the situation and the evident readiness of the Clearing House committee to take radical steps when the plight of the Mercantile National Bank furnished occasion for intervention and called for help to the threatened institution.

For a clear understanding of the disturbance it is necessary to refer to the personality of the financiers engaged in these novel and dangerous experiments. The principal figure in them is Mr. C. W. Morse, who had been connected with various banking enterprises at New York and elsewhere, and was known to fame as a leading promoter of the American Ice Company, and more recently as the organizer of the Consolidated Steamship Lines, or coastwise steamship trust. Another party was represented by Messrs. E. R. and O. F. Thomas, who have also been identified with the promotion of certain industrial enterprises, notably the Western Ice Company. The third group in the make-up of the quasi combination were Messrs. F. Augustus Heinze and his brothers, represented by the Stock Exchange firm of Otto C. Heinze & Co., and also holding control of the United Copper Company, which organization, it will be recalled, less than a year ago sold its principal mines to the Butte Coalition Copper Company, thus ending the long litigation with the Amalgamated interest at Butte, Mont., and acquiring in the operation a considerable sum either in cash or securities. After this the Heinzes entered the New York banking field and became more or less associated with the Thomas and the Morse interests.

As matters stood on the eve of last week's developments, all three parties were represented in the control and management of the Mercantile National Bank, the most important of their institutions, F. A. Heinze figuring as its president. The chief bank controlled by Morse was the National Bank of North America, while the Thomas interests owned the Consolidated National Bank, the Heinzes being associated with them in it. This was also the case with the Mechanics & Traders Bank, while among the institutions in which Mr. Morse figured as a director, and in which he and his associates presumably had large interests, was the New Amsterdam National Bank and the Fourteenth Street Bank. The Thomas party were also prominent in the managements of the Hamilton Bank and the Hudson Trust Company. These institutions represented a total capitalization of $11,400,000, which with their respective surpluses and deposits as of October 12, are shown in the following tabulated form:

	Capital	*Surplus*	*Deposits*
Mercantile Nat. Bank* ..	$3,000,000	$5,043,600	$11,569,400
Consolidated Nat. Bank..	1,000,000	1,114,700	3,913,300
Nat. Bank of N. America*	2,200,000	2,207,600	13,320,000
Mechanics & Traders Bk*	2,000,000	943,300	19,001,000
New Amster'm Nat. Bk*	1,000,000	266,600	5,132,900
Fourteenth Street Bank*.	1,000,000	416,200	7,392,300
Hamilton Bank.....	200,000	288,700	7,210,000
Hudson Trust Co.....	1,000,000	106,000	3,828,000
Total	11,400,000	10,386,700	71,366,900

* Members of New York Clearing House.

The following synopsis of financial events of the past two weeks is inserted as a simple chronological summary which may be convenient for reference hereafter:

October 14.—United Copper shorts squeezed. Price advanced from 37¼ to 60 on curb. Concerted buying helps market.

October 16.—United Copper "corner" smashed. Gross & Kleeberg fail.

October 17.—Amalgamated Copper dividend cut from 8 to 4 per cent. Otto Heinze & Co. suspended by New York Stock Exchange. F. A. Heinze resigns presidency of Mercantile National Bank. State Savings Bank of Butte suspends. Haller, Soehle & Co. of Hamburg suspend. Liabilities $5,000,000 to $7,000,000.

October 18.—Break in "curb" stocks, mostly "coppers." Resignations of Mercantile National Bank directors called for as prerequisite to aid from New York Clearing House.

October 19.—Strong showing of bank statement. Increase of $6,527,200 in surplus reserves.

October 20.—Meeting of Clearing House pledges aid to banks. Changes in presidency of Mercantile National and National Bank of North America. Morse, Heinze and Thomas interests withdraw from banks.

October 21.—Stock prices advance. President Barney of Knickerbocker Trust Company resigns. National Bank of Commerce gives notice that it will cease to clear Knickerbocker Trust Company,

October 22.—Knickerbocker Trust Company suspends after run, during which $8,000,000 was paid out. Secretary Cortelyou comes to New York.

October 23.—J. P. Morgan organizes banking interests. Run of Trust Company of America successfully withstood through aid of banks. Secretary Cortelyou announces that he will deposit $25,000,000 in national banks. Trust company officers form protective committee of five. Westinghouse companies pass into receivers' hands. Pittsburgh Stock Exchange closed at request of Clearing House of that city. Small runs on a few New York City trust companies.

October 24.—Hamilton and Twelfth Ward banks suspend as a safety measure. Trust Company of America receives $1,000,000 in deposits. Small runs at many banks. Money market eased by J. P. Morgan & Co. offering $25,000,000 at 10 per cent. Previous rate on call, 100 per cent. Stock market rallies 2 to 6 points. Small runs on savings banks and trust companies satisfactorily met.

October 25.—Stock market steadier, closing higher. Feeling better. Aftermath of trouble seen in reports of temporary suspension of Union Trust Company of Providence, United States Exchange Bank of Manhattan, and Borough Bank, First National Bank, Williamsburgh Trust Company and Jenkins Trust Company of Brooklyn. Financial authorities say crisis is passed.

The resignation of the head of the Heinze party as the Mercantile National Bank's president, followed by the resignations of all the directors, were, according to all accounts, made conditions precedent to the assistance from the other Clearing House banks, which has apparently carried the institution in question out of danger. The selection of Mr. Seth M. Milliken as the new president of the bank also gave a feeling of security in respect to its immediate future. The uncertainty about the situation on last Saturday and Monday was further modified by the announcements that Mr. Morse and the Thomas brothers had also retired from all positions as officers or directors of banks and had in most cases disposed of their interests in the various institutions. It is to be remarked, however, that the changes in question have not prevented a suspension of the Hamilton Bank, and on Friday this was followed by the same kind of developments in connection with a number of minor institutions in Greater New York, including the First National Bank of Brooklyn. In most of these cases, however, the statement was made that the suspensions were only temporary and were due to the inability of the managements to immediately obtain the funds with which to pay unduly affrighted depositors.

THE TRUST COMPANY SITUATION.

During the past week the very dangerous and trying situation in regard to banking institutions at New York was complicated in an additional degree by the position of certain of the local trust companies. Founded, as the original institutions of this character were, to undertake and carry out, under a permanent and continuous form, the obligations incurred by executors, trustees and others acting in a fiduciary capacity, their success, the large profits they paid their stockholders, the enormous surpluses they accumulated, and the prestige they obtained in the financial community have led to an extension of this form of business organizations and a multiplication of the concerns originally engaged in it.

The events of the present week have been a rude awakening for those who considered that all deposits in trust companies were under fiduciary restrictions. The developments show, however, that they were no more effectually safeguarded than if they had been placed in one of the leading national or state banks. On last Monday the Knickerbocker Trust Company closed its doors after a vain attempt to procure assistance from the Clearing House or from companies of its own class. It would seem that the directors of the unfortunate institution, headed by its president, Mr. Chas. T. Barney, permitted a large amount of its deposits to be invested in real estate, or in operations based upon that class of property. These constituted assets which could not be immediately converted, so that the Clearing House and the other trust companies refused to come to the rescue. Following this there was a run upon the Trust Company of America, an institution which, under the headship of Mr. Oakleigh Thorne, had taken part in industrial promotions and other operations of a similar character, while it has been also alleged that its heads were in a certain degree affiliated with the Morse and other interests whose operations are referred to in the bank situation as described above. Help from large banking interests was, however, procured, and in a run which has no parallel in New York's banking history, the Trust Company of America, at the close on Friday, was still intact after having paid out in cash to depositors somewhere in the neighborhood of $15,000,000.

Authorities on finance have repeatedly pointed out that in doing a general banking business, the trust companies, not only of New York but elsewhere, were departing from the principles on which such institutions are based, and at the same time incurred dangerous risks in case of trouble in the money market. In attracting vast amounts of deposits subject to withdrawal by check and allowing interest on the same, while they are not restricted by law and custom to keeping the assets against the same in a liquid form, certain of the trust companies placed themselves in a position which could readily become unsound. There are, of course, exceptions to this, and the new legislative requirement that the trust companies shall keep a 15 per cent. reserve was a step in the right direction. Still, the lessons taught by the mishap to the Knickerbocker Trust Company and the run on the Trust Company of America would point to the necessity for further action, if not by this class of organizations as a body then by the legislature of the state, which will place the banking side of the business of trust companies upon a better footing. Another very important possibility is that the trust companies of New York City will associate themselves in a body akin in its organization to the Clearing House of the national and state banks. In fact, a committee has been called into existence by the present crisis, composed of some of the leading trust company presidents, which it is intimated is considering such a plan.

RAILWAY NET EARNINGS DECLINING.

For some months past, or perhaps we should say ever since December last, proficient observers of the trend of railway earnings have been looking for smaller increases, if not actual decreases, to occur in net earnings as the year progressed. Anticipation has given way to realization, for net earnings, considered in the aggregate, are now showing lighter advances, the gain in net receipts for August, the latest month for which complete returns are available, being only 1.4 per cent., although the percentage of increase in gross earnings was 12.4 per cent. No one who has paid the least attention to railway matters need be told at this late day that the primary cause of the reduced volume of net earnings is the vast augmentation in the cost of operation, the

average gain in that item for a number of months past being in the neighborhood of 20 per cent. At the same time it is true that the new method of accounting prescribed by the Interstate Commerce Commission for the compilation of railway reports is responsible for some part of the smaller ratios of gain now being returned in connection with railway net earnings. Be that as it may, the main feature is the heavily increased cost of doing business. Thus, taking only a few examples, we find that while the Atchison increased its gross earnings in August by $727,452, net earnings actually decreased $538,309; the Pennsylvania east of Pittsburgh added $2,050,000 to its gross receipts, but saved only $359,600 of that sum for the net. Of course the western lines did better, the gain in gross receipts in August being $1,272,600, while the net advanced $517,000. Somewhat similar instances could be cited, but we think the small increase in net receipts amply illustrates the burdensome influences of the heavy cost of operation.

To get to the purely statistical side of the matter, it may be said that gross earnings in August this year amounted to $120,619,118, the gain over August, 1906, being $12,962,926, or 12.4 per cent. Operating expenses advanced $12,414,243, or 17.5 per cent. Net earnings amounted to $37,484,373, but the increase over August last year was only $548,683, or 1.4 per cent. This ratio of gain is the smallest reported since last March, when decreases in that and immediately preceding months were the rule because of the inclement weather then prevailing. But the whole story regarding the results of August earnings is set forth in the following few lines:

	1907	1906	*Inc., per ct.*
Gross	$120,619,118	$107,656,192	12.4
Operating expenses	83,134,745	70,720,502	17.5
Net earnings	37,484,373	36,935,690	1.4

The above total of gross earnings, when segregated into group form, makes this showing:

	1907	1906	*Inc., p. ct.*
Northwestern	$9,422,269	$8,494,273	10.9
Central western	10,128,706	9,606,295	5.4
Trunk lines	35,364,283	31,282,207	13.0
Eastern	3,783,197	3,384,871	11.7
Anthracite coal	9,077,376	8,100,651	12.0
Southern	24,644,885	22,086,539	11.5
Southwestern	20,394,674	17,881,043	14.0
Pacific	7,803,728	6,820,313	14.4
Total	120,619,118	107,656,192	12.4

Every group shows an increase, the ratio being well in excess of 10 per cent. in each instance, except in that of the central western group, which returns a gain of only 5.4 per cent.

Net earnings are set forth by groups in the following:

	1907	1906	*Inc., per ct.*
Northwestern	$2,772,970	$3,161,129	*12.3
Central western	2,840,403	3,094,298	*8.2
Trunk lines	11,308,563	10,800,611	4.6
Eastern	1,463,320	1,349,149	8.4
Anthracite coal	3,599,985	3,381,241	6.4
Southern	6,425,593	5,724,685	12.2
Southwestern	6,338,784	6,807,812	*6.8
Pacific	2,734,755	2,616,765	4.5
Total	37,484,373	36,935,690	1.6

* Decrease.

It will be noticed that while five groups show increases, three contribute decreases. The southern group furnishes the heaviest ratio of gain—12.2 per cent.—the eastern following with 8.4 per cent., and the hard-coal roads show a gain of 6.4 per cent. The other accretions are of moderate proportions, being 4.6 per cent. and 4.5 per cent. reported by the trunk lines and Pacific roads respectively. The losses are furnished by the northwestern lines, 12.3 per cent.; by the central western roads, 8.2 per cent., and by the southwestern roads, 6.8 per cent.

The trend of gross and net earnings for eight months of the calendar year are shown in the following table:

	Per cent. inc. Gross, 1907	*Net,* 1907
January	8.2	*2.4
February	7.7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
July	16.0	5.4
August	12.4	1.4

* Decrease.

The principal changes in net for August, 1907, as compared with the same month last year, are as follows:

INCREASES.	
Pennsylvania (west of Pittsburgh and Erie)	$517,100
Pennsylvania (east of Pittsburgh and Erie)	359,600
Philadelphia & Reading	222,312
Chesapeake & Ohio	213,340
Norfolk & Western	212,106
Louisville & Nashville	139,044
Missouri, Kansas & Texas	138,426
Wabash	132,153
Seaboard Air Line	115,259
Canadian Pacific	107,696
Kansas City Southern	100,760
DECREASES.	
Atchison	$538,389
Illinois Central	232,917
Rock Island	225,040
Southern Railway	177,755
St. Louis & San Francisco	175,025
Lehigh Valley	136,046
Minneapolis, St. Paul & Sault Ste. Marie	122,139

Inasmuch as current gross earnings are showing smaller gains as contrasted with last year's returns, it is probable that the publication of subsequent monthly net earnings will be invested with more than the ordinary degree of interest.

THE PRESIDENT'S PLANS FOR THE MISSISSIPPI.

President Roosevelt's study of the Mississippi river problem has seemingly made him a most energetic advocate of the improvement demanded by the people living in the great central valley. This was clearly indicated in a speech delivered by him at Vicksburg after a fortnight spent in the canebrakes of Louisiana. He declared that he would go back to Washington with the set purpose of doing everything lying in his power to see that the United States does its full share in making the Mississippi river a part of the seacoast—in making it a deep channel from the great lakes to the gulf. Furthermore, he declared that he wished to see the levees for the lower part of the great river so built as to remove absolutely and completely from the minds of all the dwellers in the lowlands all apprehension of a possible overflow. Mr. Roosevelt referred to the fact that the people of Holland had taken two-thirds of their country out from under the ocean and had lived behind the dikes for centuries in safety. With one-tenth of the effort, he said, we, an infinitely richer nation, can take the incomparably rich bottom lands of the lower Mississippi out from all fear of flooding by that river.

Generally, the President said, he does not like to say in advance what he intends to do, but in the case before him he decided to break his rule and to say that in his next message to Congress he would advocate as heartily as he knew how that the Congress now elected should take the first steps to bring about that deep channel way and the attendant broad and high levee system which will make of those alluvial bottoms the richest and most populous agricultural land on the face of the globe. In his view, any policy which tends to the uplifting of any portion of the people, in the end distributes its benefits over the whole people. We are now, he added, digging the Panama canal, and the work is being well done. One reason why the work is handled well is that the government refused to go into it until after careful study it did not make any false steps. When the government starts on the epoch-making work of improving the Mississippi also, he wants to be sure that the start is made on principles that will prevent mistakes, extravagance or misapplication of effort. He expects that he will have no small difficulty in persuading some people of the wisdom of a policy such as that he advocates—a policy that means the expenditure of an immense sum of money and that must continue over a long course of years. If that policy is tainted in any way by jobbery or folly it will be immeasurably more difficult to carry it through. What must be looked out for in an especial way is the action of the men, probably well meaning, who in their anxiety to serve some particular district will try to divert what should be a national effort to deepen a great national highway into a succession of efforts spread out so thin as to make all ineffective.

The President extended his vision, however, beyond the question of the improvement of the Mississippi. Ultimately, he said, the national government can in his opinion do an immense amount of irrigation through certain portions of the southern states not affected by the project for the deepening of the Mississippi. He holds that through the coöperation of the national government as much can be done in the way of irrigation to relieve the condition in certain southern states as has already been done by irrigation in the far west. He thinks that ultimately we shall be able to deepen a large number of streams and waterways in the nation. There is, however, no doubt in his mind as to where the beginning should be made. We should, he urges, take the big rivers first, and first among these the Mississippi and its most prominent tributaries.

PRODUCTION OF PRECIOUS METALS.

As a result of conferences and adjustments between the Bureau of the Mint and the Geological Survey, an agreement on the statistics of production of gold and silver in the United States in 1906 has been reached, and the figures are accepted as final by the two bureaus. The data have been ascertained from bullion deposits in the United States mints and assay offices and by statements from smelting and refining establishments. Following are the figures of gold and silver production by states and territories in 1906:

GOLD.	*Fine ounces*	*Value*
Alabama	1,137	$23,500
Alaska	1,033,537	21,365,100
Arizona	132,891	2,747,100
California	911,041	18,832,900
Colorado	1,109,452	22,934,400
Georgia	1,146	23,700
Idaho	50,102	1,035,700
Montana	218,752	4,522,000
Nevada	448,852	9,278,600
New Mexico	12,877	266,200
North Carolina	4,397	90,900
Oregon	63,850	1,320,100
South Carolina	3,609	74,600
South Dakota	319,512	6,604,900
Tennessee	39	800
Texas	164	3,400
Utah	248,268	5,130,900
Virginia	498	10,300
Washington	4,983	103,000
Wyoming	276	5,700
Total	4,565,333	94,373,800

SILVER.	*Fine ounces*	*Commerc'l value*
Alabama	100	$68
Alaska	203,500	137,747
Arizona	2,959,200	2,009,822
California	1,517,500	1,027,180
Colorado	12,447,400	8,425,520
Georgia	300	203
Idaho	8,836,200	5,981,135
Michigan	186,100	125,969
Missouri	31,300	21,187
Montana	12,540,300	8,488,404
Nevada	5,207,600	3,524,972
New Mexico	453,400	306,902
North Carolina	24,700	16,719
Oregon	90,700	61,394
South Carolina	100	68
South Dakota	155,200	105,053
Tennessee	25,600	17,328
Texas	277,400	187,769
Utah	11,508,000	7,789,650
Virginia	100	68
Washington	42,100	28,497
Wyoming	1,100	745
Total	56,517,900	38,256,400

The production of gold in the United States during 1906 was $94,373,800, a gain of $6,193,100, or 7 per cent., over 1905, when the production was $88,180,700. The principal gain was in Alaska, amounting to $6,439,500, or practically the entire gain. Nevada's gain was $3,919,500, Oregon's $75,200 and Arizona's $55,800. The greatest loss in gold production in any state was in Colorado, where there was a decrease of $2,766,700. The next largest loss was in Montana, $367,300. California lost $364,200, South Dakota $309,000, Washington $267,000, Idaho $39,900, North Carolina $33,000, South Carolina $20,500 and Wyoming $18,000. There was also a loss in Georgia.

The total production of silver in the United States during 1906 is given as 56,517,900 fine ounces, of the commercial value of $38,256,400, as against 56,101,600 fine ounces, of the commercial value of $34,221,976, in 1905. There is here shown a gain of only seven-tenths of 1 per cent. in the quantity produced, but an increase of 11 per cent. in the value thereof. This large difference is explained by the fact that the average price of silver per ounce in 1906 was .67531 cents, as against .61027 cents in 1905.

There was an increase in the production of silver in Arizona during 1906 of 363,500 ounces, California 435,500 ounces, Idaho 710,600 ounces, and in Utah 1,188,200 ounces. The greatest loss in the production of silver during the year was in Montana, amounting to 914,400 ounces, and in Colorado, of 495,400 ounces.

Just what the United States has done in the production of the precious metals during the past twelve years may be ascertained from the following table:

	Gold, value	*Silver, value*
1906	$94,373,800	$38,256,400
1905	88,180,700	34,221,976
1904	80,464,700	33,456,000
1903	73,591,700	29,322,000
1902	80,000,000	29,415,000
1901	78,666,000	33,128,000
1900	79,171,000	35,741,000
1899	71,053,000	32,859,000
1898	64,463,000	32,118,000
1897	57,363,000	32,316,000
1896	53,088,000	30,655,000
1895	46,610,000	36,445,000

It will be seen that the great expansion has been in the production of gold, which has slightly more than doubled.

THE COUNTRY'S MEAT PRODUCTION.

An interesting report on the supply of meat in this country has been made by the Agricultural Department, which, as the foremost conclusion of its investigation, announces that there are fewer meat-producing animals relatively to the population of the country than in 1840. In other words, while the number of animals in the country has increased, the population has increased at a more rapid rate, and the conclusion is natural that the per

capita meat consumption of the American people has fallen far below what it was in 1840. In fact, the statement is made that meat to-day makes up only one-third of the dietary, as against probably one-half in 1840.

Naturally, a vast quantity of statistics of various kinds have been compiled to allow of these conclusions being arrived at. Thus the number of meat-producing animals slaughtered or exported in 1900 is placed at 93,502,000, which contributed 16,549,921,000 pounds of dressed weight. Not all of this was actual meat; in fact, the weight of bones and trimmings is placed at one-fifth of this, making the net weight of edible meat available at 11,241,242,000 pounds. In addition to this "dressed meat" product there are other products, such as livers, hearts, tongues and other products, which aggregated 2,636,409,000 pounds in weight, and these added to the net edible meat supply make a total supply of edible product of 15,870,889,000 pounds, or if the weight of bones and trimmings be added, a total of 19,186,330,000 pounds of meat entering into the domestic or foreign trade. Just what these statistics mean when applied to the average family is shown by further calculations.

The average private family in 1900 contained 4.6 persons, and this family consumed 855 pounds of dressed meat, 680 pounds of edible meat, or 840 pounds of all edible product. It is also figured that the average private family bought of edible or other meat products, in all, 1,014 pounds, or a little over half a ton. Furthermore, it is found that of the meat consumption, beef and veal constitute 47 per cent., mutton and lamb 7 per cent. and pork 46 per cent. Investigation of meat prices by the Bureau of Labor some time ago showed that the average price of meat per pound paid by consumers in 1900 was 12¾ cents; 13 cents in 1901; 13½ cents in 1905, and 13¾ or possibly 14 cents in 1906. It follows that the retail meat bill of this country was $2,052,279,000 in 1900, and about $2,304,000,000 or more in 1906. Every increase of a cent per pound in the national average retail price of meat raises the total yearly expense to consumers by $168,000,000. There are given in the report also some returns of meat consumption per capita in this and some other countries. In this country the consumption per capita is placed at 185.8 pounds of meat in terms of dressed weight. The per capita consumption of meat in the United Kingdom is 121.3 pounds; in Germany, 98.7 pounds; in France, 79 pounds; in Italy, 46.5 pounds; in Australia, 263 pounds; New Zealand, 212 pounds; Cuba, 124 pounds; Sweden, 62 pounds; Belgium, 70 pounds, and Denmark, 76 pounds.

AMERICAN MANUFACTURERS AND THE EASTERN TRADE.

II.

Editor of BRADSTREET'S:

It seems to be difficult for the American manufacturer to realize that almost every country in the East contains two or more entirely different races whose tastes, prejudices and requirements vary greatly from one another. A large shipment of cotton goods from New York went wrong solely because they were sent to a Hindoo community and bore the stamp of a Turk's head. The same goods would have appealed to Mohammedan buyers for the very reason that induced the Bengalese to reject them.

Thorough and systematic preparation is necessary to entrance into Oriental markets. Representatives should be sent into the contemplated fields to study the people, the demand, the system of credit, the methods of advertising, distribution of samples, shipping and all other details. Americans should be employed in this work and as resident agents. In the East, as elsewhere, the personal equation is an important factor in business relations. One man, in most instances, might represent several firms whose goods do not conflict.

The representative must be properly supported by his principals. His orders should receive prompt attention and the most exact response. If he asks the house to change the lettering of its stamp from Roman to Gothic, he should not be set down as a whimsical idiot. This is one of the things that American manufacturers must learn—that apparently trivial details are of the utmost importance in the trade transactions of the East. The British or German exporter is ready to cater to the slightest demand of the market and writes his agent: "Let us know what your territory wants in price and style and packing, and we will furnish you with it." The American manufacturer is apt to say to his agent: "This is the way we make our goods. If you can't sell them in this style, we don't care for the trade." Such an independent attitude is tenable while a factory is running overtime on domestic orders, but it cannot be maintained with success in the markets of China, for instance, where the buyers are not Fiji Islanders or Zambesian blacks, who will take anything that is sent to them, but as shrewd and crafty traders as any in the world. They are difficult to reach, but their extraordinary continuance makes the trouble well worth while.

American manufacturers must be prepared to protect their agents as do the English and Germans. A representative should be allowed commission on all sales in his territory. He must have liberal traveling expenses. Distances are great in the East. He should be amply supplied with samples, and all buyers in his territory should be encouraged to order from his agency. Advertising cannot be neglected. American houses that spend large sums in advertising at home and have salesmen on the road expect to introduce their goods abroad through catalogues.

Agents in the East complain that letters from America are frequently misdirected and more frequently understamped. Some English firms refuse to accept such communications, not from a niggardly disinclination to pay excess postage, but because they resent such indications of what they call "sloppy" business methods. Then, again, the American correspondent often displays an amazing ignorance of the time required for transmission. Before a letter can have reached its destination, he will sometimes follow it with another inquiring why he has received no reply.

In keeping with the laxity in correspondence is carelessness in shipping. Goods are commonly sent by the most roundabout routes. An agent at Singapore writes; "We once had a shipment from New York that went down to New Orleans, then by the Southern Pacific to San Francisco, thence to Hong-Kong, where it lay for a month, and was finally transshipped to Singapore. It was five months on the way, and cost four times as much as if it had been shipped straight from New York by one of the freight steamers to Singapore."

Packing is another matter in which Americans are very lax. Their goods almost always arrive in bad condition, and not infrequently scattered broadcast in the hold. Complaints of this kind are made daily from every part of the world, and many a good initial shipment, which might otherwise have paved the way to a permanent business, results in the rejection of all future dealings. The English are particularly careful packers, and it would pay any American house that contemplates extensive trade to the Orient to send a man to England to study the methods of putting up goods for shipment.

Philadelphia. C. H. FORBES-LINDSAY.

EDITORIAL NOTES.

In spite of the many exciting matters which have occupied the attention of the financial markets for the past week or so, the contest for control of the Illinois Central Railroad Company between the Harriman interests and those represented by Mr. Stuyvesant Fish has not been totally ignored. One of the surprises which have attended the outcome thus far is the unexpectedly large support from the general body of stockholders which has been accorded to Mr. Fish. In fact, the result of the poll up to this time shows a considerable majority of votes in favor of his candidates to fill the vacancies in the directorate. To all appearances the ultimate outcome rests with the decision of the courts as to whether the Harriman party will be able to secure a dissolution of the injunction which the Fish faction procured against their voting the large block of Illinois Central stock belonging to, or controlled in the interest of, the Union Pacific Railroad Company. In fact, Mr. Harriman himself openly admitted this when he left the meeting in Chicago and returned to New York, intrusting his subordinates with the care of his cause at that point. The struggle is regarded in railroad circles as of very considerable importance, inasmuch as control of the Illinois Central system would strongly intrench the Harriman party in the traffic of the Mississippi valley, and supplement in an advantageous way the strategic position of the Union Pacific-Southern Pacific combination. In addition to this, it is pointed out that the Wells-Fargo Express, a Harriman organization, in the event of his making good in his effort to firmly grasp the Illinois Central, would probably supplant the American Express, which now operates over the lines of that system.

One of the disturbing features of the past week's news was the announcement made on last Wednesday that the Pittsburgh Stock Exchange, at the request of the local Clearing House, had found it necessary to close its doors for the time being and to suspend all operations, and that, furthermore, this action was the result of the financial situation of the Westinghouse Electric & Manufacturing Company and of some of its allied corporations. This was followed by further announcements that receivers would be appointed for the Westinghouse Electric, the Westinghouse Machine Company and the Securities Investment Company, the latter being an organization through which the Westinghouse corporations market the bonds and stocks of the electric light and trolley companies which are their customers, and which make payment for machinery and supplies in that form. It was stated that this did not affect the Westinghouse Airbrake Company or other affiliated organizations in the same group. The trouble, in fact, was understood to be of a temporary nature, and was altogether the outcome of the inability of the Westinghouse Electric and the Securities Investment Company to sell securities with which to raise money for working capital and to pay for current work. The industrial companies all have large orders requiring considerable immediate outlays, and the Securities Investment Company has been advancing money to them until its immediate resources have been practically exhausted. This rendered necessary the application for a receivership, which was only decided upon after a full conference with the Clearing House committee and the approval of the leading bankers of Pittsburgh. Both the electric and the machine companies are declared to be entirely solvent, but it was of course natural that, in view of the sudden and unexpected announcement of the outcome in this respect, there should have been a very heavy break in Westinghouse shares, with a corresponding effect upon the market position of General Electric shares, although there has been no intimation that the latter company is similarly circumstanced.

Such annual reports of industrial companies as are now coming to hand make, as a rule, quite favorable showings in respect to increased earnings, both gross and net. An exception to this is furnished by the report of the International Paper Company covering the year ending June 30, 1907, which was published a few days ago. In this case the results for the year, as compared with those of the preceding twelve months, are as follows:

	1907.	*Changes.*
Gross income	$21,841,486	Inc. $3,671
Manufacturers' expenses	19,000,017	Inc. 320,721
Taxes, bond interest, etc	1,217,853	Inc. 44,875
Total expenses	20,217,870	Inc. 365,596
Balance	1,623,616	Dec. 361,925
Preferred div'ds (6 per cent.)	1,344,402	....
Surplus	279,214	Dec. 361,925
Discount sale 5 per cent. bonds	75,000	Inc. 75,000
Final surplus	204,214	Dec. 436,925
Previous surplus	6,661,286	Inc. 641,139
Total surplus	6,865,500	Inc. 204,214

It will be seen that the increase in gross income was merely nominal and that the expenses increased $365,000, so that after providing for the 6 per cent. dividends upon the preferred stock the surplus was $361,000 smaller than the year before, the total amount thereof being less than half what it was in 1905-06. The management of the company state in the report that the unfavorable outcome was due to the greater cost of manufacturing, occasioned by higher prices for wood and pulp and the higher scale of wages. It, however, claims that the demand for paper is now fully equal to the production, and that as prices are higher, the indications as regards the company's performance during the current year may be regarded as more promising.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

License—Revocation—Mandamus.

The New York Court of Appeals held, in the case of The People ex rel. Lodes vs. Department of Health of the City of New York, that the Board of Health of the city of New York may revoke without notice a license issued by it to a milk dealer, and that if the licensee claims that such revocation was arbitrary and unreasonable, he may have recourse to an alternative writ of mandamus, but that peremptory mandamus will not lie.

Undisclosed Principal—Contract—Agency.

The Supreme Court of Alabama held, in the case of Birmingham Matinee Club vs. McCarty, that an undisclosed principal cannot compel performance or recover damages for the breach of a contract made by his agent in the agent's name for the sale to another of lands of the principal, in which contract it is stipulated that the agent, as the ostensible seller, will grant by warranty deed an unincumbered title, such stipulation involving the elements of personal trust and confidence, and that the purchaser may recover back the purchase money paid thereunder.

Railroad—Liquor—Interstate Commerce.

The Kentucky Court of Appeals held, in the case of The Cincinnati, New Orleans & Texas Pacific Railroad Company vs. Commonwealth, that a railroad operated in the state of Kentucky whose line extends into a foreign state is engaged in interstate commerce and may convey spirituous liquors from such foreign state and deliver the same to the consignee in local option territory in Kentucky, and that the question of the shipment on the part of the consignee being a trick or device to evade the local option law has no place in the transaction as far as the common carrier is concerned.

Nuisance—Ordinance—Smoke—Validity.

The Supreme Court of Indiana held, in the case of Bowers vs. City of Indianapolis, that dense black or gray smoke emitted from the chimney of any large building having a stationary steam boiler or furnace, or from a locomotive, within a city was so far in the nature of a public nuisance that the city ordinance of Indianapolis declaring it to constitute one was valid. The court further held in this case that the power conferred on cities "to declare what shall constitute a public nuisance" extends to other things than those which are already public nuisances under the criminal law; that the exemption of private residences from the operation of the ordinance does not make it invalid, and that the fact that a single ordinance embraces more than one subject-matter does not render it invalid.

Carrier's Liability—Contract—Circus.

A circus company owning its own cars contracted with a railroad company for the hire of motive power and the use of tracks and trainmen, to be considered as the company's servants, for the transportation of the train from one place to another, the contract exempting the railroad company from liability for injuries to any person or persons using the train from whatsoever cause. The United States Circuit Court of Appeals held, in the case of Clough vs. Grand Trunk Western Railway, that the railroad company being under no legal duty to move the circus company in the manner specified, the contract was not contrary to public policy, and that the relation of passenger and carrier did not exist between the railroad company and an employee of the circus company traveling solely by virtue of his employment, who was not a party to such transportation contract, so as to entitle such employee to recover against the railroad company for injuries sustained in a collision between two sections of the circus train.

Employer's Liability—Relation Suspended.

In a case recently decided by the United States Circuit Court of Appeals for the Ninth Circuit, it appeared that the plaintiff's intestate, a bridge foreman on the defendant's railroad, living at the time on an outfit car on a siding, went with his family on a velocipede car one afternoon to a spur track some two and a half miles distant, near which his father-in-law resided. The car was returned, and in the evening, about 7 o'clock, some of the men by his direction went after him with a handcar. He was then at his father-in-law's house, where he had been visiting since 5 o'clock, by which time his business for the defendant at the spur, if any, had been finished. About 8.30 he started back with the men, having no light on the car, and while on the way was killed in a collision with a special train. The court held (Russell vs. Oregon Short Line Railway Company) that at the time he was engaged on his own private affairs, and that no relation of master and servant existed between him and the defendant company which brought him within the terms of a state statute making railroad companies liable for injuries to their employees caused by negligence of their fellow-servants.

Bankruptcy—Mortgage—Corporation.

The New York Court of Appeals held, in the case of Zartman as Trustee vs. The First National Bank of Waterloo, that a mortgage given by a manufacturing company upon all of its property, real and personal, to secure its bonds, purporting to cover its after-acquired personal property, and leaving the mortgagor in possession to deal with it as it saw fit until taken possession of by the mortgagee on default in payment, was not good as against a trustee in bankruptcy representing general creditors so far as the shifting stock and material were concerned, although they were taken possession of by the mortgagee prior to the appointment of the trustee in bankruptcy.

Forgery—Receipt—Extrinsic Facts.

Where a paper alleged to have been forged is of such a character that it is only by reason of the existence of extrinsic facts that the holder could be enabled by its use to defraud another, the indictment must aver such facts as will disclose its capacity to deceive and defraud, and enable the court judicially to see its tendency. So held by the Supreme Court of Indiana in the case of State ex rel. Floyd. In this case the court held that an indictment alleging that defendant, while trustee of a school township, forged a receipt purporting to be an acknowledgment of the receipt by one named of money "out of the tuition fund for teaching" in the township, was not sufficient to charge a public offense without an allegation of facts showing that the person mentioned was one of the trustees of his township having a written contract of employment as such.

Insurance—Accident—Shooting.

Under a title covering "Special Indemnities," an accident insurance policy provided that it did not exclude indemnity for loss by accident produced by shooting and other enumerated causes. Some of those causes were sports involving conscious participation on the part of the assured, but others excluded such participation. The policy also provided under this title that in case of loss covered by the same, the company should pay one-half of the ordinary accident indemnity for such loss. An action was brought by a beneficiary under the policy to recover the full amount of insurance for loss of life by accident after the insured had been shot by a burglar and had died. The Supreme Court of Minnesota held, in the case of Bader vs. New Amsterdam Casualty Company, that the policy construed as a whole as favorably to the insured as might reasonably be without distorting the intended meaning of words, entitled the beneficiary to recover only one-half, and not the whole amount of ordinary accident indemnity.

Insurance—Verbal Contract—Expectancy.

The Kentucky Court of Appeals held, in the case of American Central Insurance Company vs. Leake, that a verbal contract of insurance on a dwelling house made by the owner with the agent of an insurance company in October, 1904, and to expire in December, 1907, was not void under the statute of frauds as being a contract not to be performed within a year, because the liability of the company depended upon the destruction of the house by fire, which might have happened as it did within a year from the making of the contract; that a widow who occupies a house in which she owns a life estate with remainder to her children has an insurable interest therein, and that a policy procured thereon without deception or fraud is valid as to the value of her expectancy of life therein. The court further held that when a person upon whose life an estate depends is of ordinary health and vigor for his or her age, the annuity tables furnish the proper criterion to fix the value of the life estate, but that this rule should be varied on account of unusual vigor or frailty of constitution or health, and that the jury in estimating the value of a life estate has a right to consider the age and appearance of the owner for vigor or health.

BUSINESS NOTES.

Iron Consumption.

According to the London *Iron and Coal Trades Review*, "the average iron consumption of Austria to-day is under 100 pounds per capita per annum. This figure compares with an average of 600 pounds per capita in the United States, and over 400 pounds in Great Britain, so that the Austrian average is only one-sixth of the American, and less than one-fourth of that of Great Britain. In 1869 the total make of pig iron throughout the world was less than 12,000,000 tons, while the world's make of steel was not more than, if so much as, 250,000 tons. To-day the world's make of pig iron is over 60,000,000 tons, while the total steel output is probably not less than 45,000,000 tons. To all who are engaged in the great industry the question of questions must for many years to come be that of how far further changes are possible and probable. Up to the present time there appears to be but little cessation of activity in the seeking out of new inventions."

Iron Production First Half 1907.

More than 80 per cent. of the world's supply of pig iron is furnished by four countries, the United States, Germany, Great Britain and France. In the first half of the current year the total output of these four nations amounted to 26,816,939 tons, as against 25,178,304 tons for the first half of the preceding year, the increase being 6. 5 per cent. The ratio of increase shown by the United States was 7.1 per cent., while that of Great Britain amounted to 5.9 per cent., and Germany contributed a gain of 3.9 per cent. France, in which country the production of pig iron is not so important as it is in either of the other three countries, furnished an increase of 13 per cent. in the first half of 1907. In the following table the American and English outputs are given in long tons, while the figures of production for Germany and France are given in metric tons:

	1906	1907	*Increase*
United States	12,582,250	13,478,044	895,794
Germany	6,117,126	6,355,953	238,827
Great Britain	4,905,424	5,194,712	289,288
France	1,573,504	1,788,230	214,726
Total	25,178,304	26,816,939	1,638,635

Germany's production would have been somewhat larger if it had not been for the fact that some difficulty was experienced in obtaining iron ore.

New British Cotton Mills.

"Cotton-mill building," says the London *Economist*, "is still going on, some new spinning mills to be erected forthwith being announced recently. The following is a table showing how matters stand at the present time:

	Spindles, 1907	*Spindles*, 1906	*Spindles, difference*
Egyptian—			
Fully to work	1,891,708	1,410,356	481,352
Partly to work	978,668	582,000	396,668
American—			
Fully to work	1,598,364	1,215,000	383,364
Partly to work	1,986,864	381,000	1,605,864

Spindles yet to start work: Egyptian, 1,214,264; American, 2,822,092; total, 4,036,356. The fine counts question is the only matter of importance that causes a little anxiety among employers in the spinning trade. The operatives appear determined to secure a substantial advance on the present standard rate of wages for such work. It is thought that before the end of the year an acute crisis may arise on this point. The contention is that Oldham pays less wages than Bolton, the seat of the fine spinning section. It may be added that the Oldham standard list is a different one in principle to the Bolton list."

Foreign Crop Conditions.

According to Broomhall's foreign crop summary, published Tuesday, the weather in the United Kingdom has shown some improvement since the last report, although seeding is still hindered. In Scotland the crops have been badly damaged as a result of wet weather. In France sellers are reserved, and the export demand reported in the last statement continues. Germany reports favorable weather for all roots and potatoes, but rain is badly wanted for seeding. An official report from Prussia, dated October 15, places the condition of both wheat and rye at 80 per cent., against 80 per cent. a year ago. Latest advices from Austria-Hungary state that the drought has been relieved by occasional showers, and some seeding has been done, although the soil is still dry. It is expected that it will be necessary to import grain to that country during the season. In Roumania seeding is progressing rapidly, in spite of the fact of there being no general rains. Bulgaria reports that drought still continues and the outlook in the southern belt is serious. Supplies of grain are fair, and of these supplies much coarse grain is included. The weather in the Argentine is more settled, and the damage reported last week is unimportant. The official estimate of 140,000,000 bushels is considered reasonable. Latest reports from Australia state that the drought continues and wheat is deteriorating. In India the drought is unrelieved. The shipments of wheat from that country during November are expected to aggregate about 560,000 bushels.

Chinese Railway Building.

In a report from Nankin, Consul Thornwell Haynes says that the railways completed, under construction and projected in China are, at present, as follows (in miles):

Provinces	*Completed*	*Under const'n*
Manchuria	1,623	223
Chihli-Manchuria	600	..
Chihli	13	..
Chihli-Mongolia	33	92
Chili-Honan-Hupeh	754	..
Honan	93	..
Chihli-Shansi	87	68
Honan	41	75
Shantung	274	..
Kiangsu	90	113
Chekiang	..	3
Kiangsi-Hunan	64	..
Kwangtung	55	55
Kwangtung-Hunan-Hupeh	..	720
Yunan	19	273
Total	3,746	1,622

Railway lines are projected from the following places: Hankow to Chengtu (the capitals of Hupeh and Szechwan via Chungking); Soochow to Hangchow, Ningpo; Changsha to Shenchowfu; Shanghai to Kashing; Amoy to Yenping, Chuanchowfu, Foochow; Sianfu to Tungkwan (Shensi); Taiyuanfu to Pingyangfu (Shansi); Tsehchow to Taokow; Tatungfu to Kalgan; Tientsin to Chinkiang, Tehchow (Shantung); Canton to Kowloon (Hong-Kong); Wuhu to Kwangtehchow (Anhwei); Canton to Amoy (Fukien); Canton to Kanchow (Kiangsi); Shenchowfu to Changteh (North Hunan); Hengchowfu to Yungchowfu (Hunan); Tungkwan to Puchowfu (Shensi, Shansi); Kiukiang to Nanchang (Kiangsi); Sunning to Yeungkong (Kwangtung); Kalgan to Kulun (Mongolia); and from Langchowfu to Ili (Sinkiang).

Canadian Tobacco Consumption.

Vice-Consul-General P. Gorman, of Montreal, reports that the returns of the consumption of tobacco in Canada for the twelve months ending June 30 last show an increase of nearly one-third in the number of cigarettes, while the consumption of cigars has remained practically the same as compared with the fiscal year 1905-06. His statistics follow: For the twelve months ending June last, the total number of cigarettes entered for consumption in Canada was 331,972,137, as compared with 269,334,937 for the corresponding period of 1905-06, an increase of nearly one-third. In 1904 the number of cigarettes entered for consumption was 250,860,387, and ten years ago it was only 93,798,000. The consumption of cigars for the twelve months ending June 30 last was 193,816,575, practically the same as for the preceding twelve months. Cigars made from Canadian tobacco numbered 2,826,721, as compared with 3,172,466 for the fiscal year 1905-06. The total consumption of tobacco of all kinds for the twelve months is estimated at 2.953 pounds per head of the population, the largest on record. A rough estimate might figure this out at about ten pounds per head of the adult male population of the country.

The Production of Lime in 1906.

The lime produced in the United States in 1906 amounted to 3,197,754 short tons, valued at $12,480,653, an increase over the production for 1905 (which amounted to 2,984,100 tons, valued at $10,941,680) of 213,654 tons in quantity and of $1,130,425 in value. The average price per ton in 1906 was $3.90, against $3.67 in 1905, an increase of 23 cents. These figures are reported by E. C. Eckel, in an advance chapter from "Mineral Resources of the United States, Calendar Year 1906," published by the United States Geological Survey and now ready for distribution. The distribution of the production by states shows that Pennsylvania, with 624,060 tons valued at $1,857,754, has first place, its nearest competitor being Ohio, with 331,972 tons valued at $1,100,133. Maine, Wisconsin and Minnesota each produced more than 200,000 tons, with values approximating $1,000,000, and Maryland, Illinois, Massachusetts, New York and Vermont follow in the order named, with productions of more than 100,000 tons. West Virginia, Alabama and Connecticut each exceeded 90,000 tons. The value per ton increased in almost every state, the producers giving as the cause the increased cost of fuel, supplies and labor.

CURRENT BUSINESS NEWS.

Commercial.

The monthly statement prepared by the bureau of statistics at the New York Custom House shows that the total value of free and dutiable goods remaining in bonded warehouses at this port for the month ending September 30 was $40,645,568, as against $42,491,193 for August, a decrease of $1,845,625.

The potato crop of Germany is estimated at 1,580,000,000 bushels, or just what it was last year. The yield this year compares with a crop of 1,775,000,000 bushels two years ago.

Germany's foreign trade for the last nine months shows that the imports amounted to $1,641,250,000, and the exports to $1,283,750,000, including precious metals. This is a gain in imports of $113,250,000, and in exports of $155,125,000.

The rafting operations on the St. John river, New Brunswick, for the season are about finished, and almost 200,000,000 feet is estimated as the quantity of logs rafted by all the companies on the river. Operations were suspended by some of the companies earlier than usual because of the unfavorable market. At the present time the lumber market seems to be suffering from crowding, much of last year's great cut being still open for sale, and the cut this year finding but few buyers thus far.

Consul-General W. H. Michael, of Calcutta, states that the cotton planted in the Madras presidency for 1907-08, as officially reported, covers an area of 120,100 acres, which is 16 per cent. more than was planted to cotton in that presidency last year. The crop was planted in June and July, the usual time for planting cotton in that part of India, and is in fair condition. The varieties of cotton sown are Tinnevellies, Salems, Northerns and Westerns, and Cocanadas. The acres under cotton in Madras presidency this year represent about 8.8 per cent. of the total acreage to cotton in all India.

The general increase in the cost of living in Germany is shown in the official half-yearly report of the Minister of War with respect to the provisioning of the various garrisons. The following figures are based on the official market prices of the respective garrison towns. The increase since 1899 in the cost of provisioning troops in Pomeranian garrison towns is as follows:

	P. ct.		P. ct.
Stettin	22.5	Swinemunde	18.7
Anklam	22.5	Stargard	18.7
Griefswald	12.1	Belgard	12.1
Stralsund	12.5	Kolberg	25.0
Demmin	16.2	Koslin	22.5
Pasewalk	21.9	Stolp	15.2

The increase in Berlin was 15.2 per cent.; in Dantzig, 12.1 per cent.; in Breslau, 16.7 per cent.; in Hanover, 25 per cent.; in Essen, 11.5 per cent.

An officer of a Texas lumber manufacturing concern tells the *Wall Street Journal* that a grade of lumber sold widely to railroads and known as "decking" has broken from $26.50 to $16.50 within a week. He recently placed a contract for 1,000,000 feet of standard grades, however, with the International Harvester Company at slightly below quotations. Lumber prices are weak and falling, while shipments show a steady decline. Dealers are refusing good offers daily. Yellow pine is off $5 to $7, and first grades of oak are listed at $42, as against $48 three months ago. One reason, of course, is the fancy prices lumbermen have demanded until recently. Car building demand is slack.

The tomato packing season of 1907 virtually closed last week. Guesses as to the probable size of the output run from 8,500,000 to 9,500,000 cases. Maryland and Delaware appear to have lived up to the early promise of a full pack, but the canners of those states have been called upon to meet an unprecedentedly heavy demand from other sections, notably the middle west, where the crops have come close to being a failure, and it is believed that few of the southern packers will have any considerable surplus after filling orders in hand.

The French Millers' Association reports that the harvest yield of wheat of 1907 will amount to 405,000,000 bushels. To this must be added 38,960,000 bushels on hand on August 1, 1906, making 443,960,000 bushels. The average consumption, according to Dornbusch, for the last ten years was 363,008,000 bushels, leaving a surplus at the end of the current crop year of 80,952,000 bushels, which would be more than twice the surplus on August 1, 1906.

The harvesting of the Massachusetts cranberry crop is almost finished, and the output is estimated to be about 70 per cent. of the average. The berries are generally of good size and quality. The price has advanced steadily since they were first placed on the market from $5.50 a barrel at the start to more than a dollar above that at present, with indications of another advance before the Thanksgiving buying starts. The independent growers are holding their product from the market in the expectation of this advance. The growers who are allied with the Cranberry Sales Company, an organization which controls a large part of the output, however, are generally selling their berries under the apparent belief that the Wisconsin crop of 40,000 barrels, which is late when placed on the market, will cause a fall in price.

The Portland *Oregonian* says that private cables were received in Portland late Wednesday from Liverpool saying that there is a well-grounded rumor in circulation that the Emperor of Russia between now and the end of the present week will issue a ukase forbidding the exportation of wheat from Russia, as was done in 1892. The paper ventures the prediction that following this announcement grain charters will go to 45 shillings or better. "The rumor regarding the possible prohibition of Russian exports brings the recollection of what happened in 1891, and its effect on prices," says *Russel's Circular*. "The first ukase was issued prohibiting exports from November 1 of all cereals, excepting wheat. The second ukase was issued November 21, prohibiting the export of wheat. At that time Russia had been exporting about 100,000,000 bushels of wheat a year, and had also been shipping from 50,000,000 to 70,000,000 bushels of rye, from 40,000,000 to 60,000,000 bushels of barley, 60,000,000 to 100,000,000 bushels of oats, and considerable quantities of feedstuffs. The price of New York May wheat on November 9 was 115⅛, Chicago 104½. These were the highest prices made after the ukase was known. For the next two months prices ranged from those figures down about 8 cents, and at the end of the winter season prices were down about 25 cents per bushel from the figures made on the ukase."

Large shipments of poultry from the west have overstocked the markets this week and prices have taken sudden drops of from 2 to 4 cents per pound. Retailers are responding very little to the decrease in prices, most of them maintaining a price of about 27 cents for first-class stock and 23 cents for western stock.

The financial stringency has caused the Texas banks to withdraw their support from the Farmers' Union cotton warehouse movement, and it is announced by R. A. Calvin, manager of that department of the union, that no further loans will be made on cotton stored and held to boost the price. This action on the part of the banks will probably cause several hundred thousand bales of cotton to be put upon the market in the next ten days. Mr. Calvin estimated that more than 200,000 bales are stored in the warehouses.

Financial.

According to the *Wall Street Journal*, "the representative of a prominent brokerage house who has just returned from a trip through Pennsylvania and the middle west, where he endeavored to place some very high class paper, reports that all of the banks in that section are loaned up to the limit, and that many of them are receiving 9 per cent. or better for their money."

In the calendar year 1906 there was produced in the United States $94,373,800 worth of gold, a gain of $6,193,100 over 1905. The greatest increase was in Alaska, and the greatest loss in Colorado. The value of the silver produced last year was $38,256,400, an increase of $4,034,424 over 1905. The average price for silver was $0.61027 per ounce in 1905 and $0.67531 in 1906.

In the week ended October 18 ninety-two bonds out of a total of 184 traded in on the New York Stock Exchange sold at the lowest prices on record for 1907.

Data just made public by the Commissioner of Internal Revenue show the internal revenue receipts for September this year and last as follows:

	Sept., 1906	*Sept.*, 1907
Spirits	$11,851,070	$12,461,072
Tobacco	4,119,856	4,335,853
Fermented liquors	5,287,541	5,378,114
Oleomargarine	42,638	80,163
Adulterated butter	1,760	3,535
Renovated butter	13,730	13,796
Miscellaneous	46,011	45,147
Total	21,362,639	22,318,483
Increase in September, 1907		955,843

The stockholders of the Norfolk & Southern Railway met in Norfolk Wednesday and voted confirmation of the plans of the board of directors for the creation "of an issue of mortgage bonds to be known as the first and refunding mortgage 5 per cent. sinking fund gold bonds, limited to the aggregate principal amount of $25,000,000 at any one time outstanding." The issue is for the purchase for olling stock and other improvements.

On Wednesday H. S. A. Stewart and William I. Abbott were named as receivers of the Iron City Trust Company, of Pittsburgh.

On Wednesday Clark Williams, vice-president of the Columbia Trust Company, of New York City, was appointed Superintendent of the New York State Banking Department by Governor Hughes.

On Wednesday the State Banking & Trust Company, with headquarters at Carson, Nev., and branches at Gold Fields, Tonopah, Manhattan and Blair, suspended payment.

On Wednesday the Nye & Ormsby County Bank, of Nevada, suspended payment. A sign displayed at the bank stated that the suspension would be for three days, to allow coin to be shipped to the bank.

According to the *Pall Mall Gazette*, "the taler, which has ceased to be recognized as a coin of the German realm since the first of this month, began life toward the close of the fifteenth century—the actual year being 1484. It was minted at the little town of Hall, in Tyrol—hence its name, which, by the way, was until recent years spelled 'thaler'—the 'h' being reminiscent of its birthplace, where also were the silver mines which furnished the precious metal for those first talers."

A press report says that the Société Generale, of Paris, which was issuing the Westinghouse Company's bonds, announces that the issue has been stopped and that the subscriptions received have been canceled.

Mayor Ashdown, of Winnipeg, Manitoba, has returned from England, where he had gone to sell large blocks of city debentures, but failed. The mayor says the tight money market, and not lack of faith in western municipal bonds, caused his failure. He got offers, but they were entirely too low to consider.

Industrial.

The quarterly returns issued by *Lloyd's Register* indicate a further decline of activity in the shipbuilding industry of the United Kingdom. At the end of September there were under construction in the shipyards of the United Kingdom 450 vessels of 1,080,087 tons, showing a decrease of 170,000 tons as compared with the end of June, and a falling off of 185,000 tons as compared with the end of September, 1906. As regards shipbuilding in other countries, Germany leads the way with 236,348 tons under construction, the United States following with 113,072 tons, France 107,955 tons, Japan 80,800 tons and Italy 71,885 tons.

Owing to lack of orders 3,500 men have been laid off in the Pittsburgh district. The Sharon mill—2,000 men—of the American Sheet & Tin Plate Company, has closed for an indefinite length of time. Union Switch & Signal Company has laid off 700 men; Westinghouse, 1,500. The Westinghouse Air Brake plant was placed on half time and 800 employees laid off.

It is stated that retrenchment in clerical forces and station assistants is being introduced in every branch of the New Haven road by President Mellen in preparation for a dull winter. Baggage and freight hands are being discharged wherever their services can be dispensed with. Train crews are being reduced. A hundred men in the shops at Readville and fifty in Hartford have been discharged.

The following table shows the unfilled tonnage of the United States Steel Corporation at stated periods since September 30, 1905, and the unfilled tonnage as of September 30, 1907, estimated:

Quarter ending	*Unfilled*
September 30, 1907	*6,800,000
January 30, 1907	7,603,878
March 31, 1907	8,043,858
December 31, 1906	8,489,718
September 30, 1906	7,936,884
January 30, 1906	6,809,589
March 31, 1906	7,018,712
December 31, 1905	7,605,086
September 30, 1905	5,865,337

* Estimated.

The tonnage on the books of the United States Steel Corporation at present is equivalent to about 50 per cent. of the annual capacity of the corporation.

On orders from Boston, the Balaklala Copper Company, at Coram, Cal., has stopped construction work on the big smelter, now nearly completed at a cost of $1,000,000. Every man in the company's employ was dismissed, save enough to care for the machinery yet arriving. All accounts are to be closed, and nothing will be done toward completing the smelter or reopening the mine until the copper market is more favorable.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

It is stated that the American Shipbuilding Company has laid off 200 more men, leaving only 300 out of the 1,800 employed previous to the strike. The local yard may be abandoned except for repair work.

The stone produced in the United States may be classified broadly as granite, sandstone, limestone and marble. The total value of the stone product of the country in 1906 was $66,378,794, an increase of $2,570,046 over that of 1905, and an increase of $42,413,565 over that of 1896. The value of the granite, trap rock, marble, bluestone and limestone increased, while the value of the sandstone decreased. The figures are: Limestone, $27,320,243; granite, $18,569,705; marble, $7,582,938; sandstone, $7,147,439; trap rock, $3,736,571, and bluestone, $2,021,898.

"What will a thirty-knot liner burn?" asks F. E Soward in the *Iron Age*. In the *Coal Trade Journal* several years ago appeared a brief table which is worth repeating here, showing in round figures the consumption per increase of knotage up to twenty knots, as follows:

8 knots per hour	8 tons per day
10 knots per hour	16 tons per day
12 knots per hour	32 tons per day
14 knots per hour	64 tons per day
16 knots per hour	128 tons per day
18 knots per hour	256 tons per day
20 knots per hour	512 tons per day

But after twenty knots the coal consumption per extra two knots does not increase in a "just double" ratio. Thus, twenty-two knots would not require something like 1,024 tons. Due to the laws of velocity, momentum obtained, vacuo, suction, etc., after twenty knots the coal consumption per extra two knots can safely be said to "progressively decrease." So, in round figures, continue the above table, always adding the inverse ratio (starting with 50 per cent. increase) as follows to the twenty-knot 512-ton rate:

22 knots per hour	768 tons per day
24 knots per hour	896 tons per day
26 knots per hour	960 tons per day
28 knots per hour	992 tons per day
30 knots per hour	1,008 tons per day

Or, say, with allowances for contrivances, 1,000 tons in general figures for a thirty-knot Atlantic racer.

It is reported that the Struthers plant of the American Sheet & Tin Plate Company, at Sharon, Pa., will close to-day for an indefinite period, because of a scarcity of orders.

It is reported that two more furnaces of the Lackawanna Iron & Steel Company suspended operations Thursday. The suspension is due, it is said, to the slump in the iron market and is for an indefinite time. One thousand men are affected.

Railroads.

It is stated that Oakleigh Thorne, president of the Trust Company of America, has disposed of his interest in the Central of Georgia Railway.

Miscellaneous.

As bearing on the installation of the Marconi system for commercial business, the following is interesting: "By wireless telegraph to Clifden, Ireland; thence by cable to the New York *Times*. Glace Bay, Nova Scotia, October 21.—A terrific gale is blowing here, accompanied by alternating rain and snow storms, so that the Marconi station here is completely isolated with respect to the inland. We are entirely cut off from our usual land line connections, and communication with New York can only be had by the transmission of messages by wireless telegraphy to Ireland, to be sent thence by cable to America. This message will take that route, being flashed through the air by the Marconi apparatus to Clifden, whence it will be relayed through a submarine wire to New York."

The Lusitania arrived at Queenstown at 9.43 on the night of the 24th instant. The time of her passage was 4 days 22 hours 53 minutes. The voyage was a stormy one. Big seas and a fog compelled her to slow down Thursday.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade and industry have tended toward quiet, in sympathy with reports of financial unsettlement at New York and a few other cities; the continuance of mild weather, affecting as it does retail distribution; the natural seasonable slowing down of jobbing trade, and the influence upon retail trade and collections of the continuance of the holding movement of crops. On the other hand, the financial situation at New York, generally speaking, seems to be well in hand; the New York banks under courageous and experienced leadership are meeting conditions as they arise with discretion; recent declines in prices of cereals and cotton have encouraged foreign demand for the country's products; the holding of cotton, a great exchange-making medium, is showing some signs of relaxing, and lowered prices of domestic commodities lead to the hope that the demand of a prosperous country, affected by the unduly high level of some commodities, will revive.

It is an especially encouraging feature brought out in dispatches to BRADSTREET'S that the country's banks generally are reported in a sound condition, especial emphasis being laid upon the strength of the institutions at leading western centers. A few cities, as, for instance, Chicago, report that jobbers have profited by recent reductions in cotton goods; a similar policy is likely to have similar results at other centers, and with the probable advent soon of seasonable cold weather and the enlarged movement for export of the country's leading products, an increased inflow of funds from domestic and foreign sources, with the discouragement of the hitherto very heavy volume of imports, is apt to ease the financial situation.

It is a fact worth noting that while tight money restricts operations in the shoe and leather as in other trades, there is on the whole a more confident feeling in several lines, curtailment of production, as in the case of sole and upper leather, or reduction in prices, as in fancy products, having induced a larger inquiry and made for steady prices. Eastern shoe manufacturers report good orders for late fall and next spring, and the failure of the St. Louis strike has enlarged the distribution by manufacturers at that city. Wool is quiet after a very active trade, and the position of holders has been greatly improved by the transference of large supplies of staple wool sold to mills. Jobbing trade in dry goods has been of good volume for this season and shipments are large, the disposition being to get goods into distributers' hands before orders are countermanded. Northwestern jobbers are doing a good business. Chicago reports an actual gain in distribution, induced partly by price cuts. Southwestern centers report good filling-in orders from the country. Southern collections have rather improved, as has trade, which feels the influence of free marketing of cotton in some sections, and the feeling that southern banks will not encourage further holding of this product for high prices. The lumber market is quiet, and prices are being shaded to do business. Iron and steel are dull, new business is not offering freely, and new low levels have been struck by copper without bringing out much new business. Large exports of this commodity, it is claimed, reflect desire to change the scene of carrying it from this country to abroad.

Pig iron continues very quiet and prices are weaker. Southern pig, which had been pretty firmly held until recently, is quoted as low as $17.25 a ton, and it is figured that $17 would be taken on anything like acceptable business. Present prospects do not favor an early resumption of buying for next year, but at the same time stocks are not heavy, and the policy of the furnaces is to blow out rather than accumulate supplies. Steel billets are dull and easier in price. New orders for structural material are of moderate proportions. Standard steel rails are quiet, the railways being out of the market entirely, and light rails are $2 to $3 a ton lower, this being the first change in prices since last December, when an advance was ordered. Plate and sheet mills are almost up with orders, and lower prices are being quoted on the latter. Tinplate is dull, and many mills have closed down because of lack of orders. In fact, lower prices are being talked of, which would not be unnatural in view of the fall in the price of pig tin. Cast-iron pipe is inactive, but the situation in merchant pipe is good, although the mills are catching up with their order books. Wire products are in excellent demand. Old material is weak and the market seems to be demoralized. Coal is in good demand and bituminous is very firm. Coke is firm, but forward business is quiet. Copper prices still continue their downward course, lake copper being quoted as low as 12 to 12¼ cents, and electrolytic for future delivery at 11⅝ to 11⅞ cents. Domestic business is light, but shipments to Europe are heavy, the theory being that the metal is going abroad because it can be financed more readily oversea than it can be here.

Gross and net railway earnings returns point to the continuance of conditions previously noted. Thus gross railway earnings for August show a gain of 12.4 per cent., while net gained only 1.4 per cent. Bank clearings returns show that a slight decrease in the country as a whole is reported, largely because of decreases at New York and a few other large cities, but heavy gains continue to be reported by the majority of cities.

The New York stock market is nervous and disturbed, with frequent fluctuations of an irregular character, due to successive announcements of failures of minor banks or trust companies. The Trust Company of America, on which there has been a steady run, remains intact, however, and concerted efforts by the leading financial interests, including Secretary of the Treasury Cortelyou, the New York Clearing House committee, J. P. Morgan & Co., and Mr. John D. Rockefeller, to stem the tide of distrust, have been measurably successful. Prices are very irregular, but with good gains from the lowest figures of the week. Foreign exchange has been very weak at as low as 4.83 for demand sterling, though no gold importations have been announced up to the close on Friday.

Bank clearings for the week ending October 24 aggregate $3,194,846,000, 5 per cent over last week, but seven-tenths of 1 per cent. below this week last year. Outside of New York exchanges amount to $1,246,556,000, a loss of seven-tenths of 1 per cent. from last week, but a gain of 12.6 per cent. over the week last year.

Business failures for the week ending October 24 number 220, against 194 last week, 184 in the like week of 1906, 178 in 1905, 180 in 1904 and 217 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending October 24 aggregate 4,765,589 bushels, against 4,964,062 bushels last week, 5,188,817 bushels this week last year and 4,952,134 bushels in 1901. For the first seventeen weeks of the fiscal year the exports are 63,475,466 bushels, against 58,173,587 bushels in 1906-07 and 99,318,598 bushels in 1901-02. Corn exports for the week are 749,122 bushels, against 572,825 bushels last week and 1,495,111 bushels in 1906. For the fiscal year to date the exports are 16,693,933 bushels, against 13,316,938 bushels in 1906-07.

IN CANADA.

Trade is good in Canada, as a whole, and has perceptibly improved in the west, where the farmers are marketing their crops freely at high prices. Stringent money conditions at eastern centers tend to promote conservatism in the granting of credits. No signs of overbuying are reported, and, in fact, there is still general complaint of backward deliveries by manufacturers and mill agents. Fall trade aggregates compare well with a year ago. Advances in linen goods are diverting some demand to cottons. Montreal reports retail trade in the country better than of late. Toronto reports free marketing of grain, renewals of dry-goods paper are smaller than a year ago, and collections, except from parts of the west, are better. Winter-wear goods are moving better at retail and with jobbers. Winnipeg reports trade growing better, threshing returns are larger than earlier anticipated, and collections are improving. In British Columbia trade is active—better than a year ago, in fact—and there is little complaint as to collections. Labor is still scarce. Failures for the week number 39, as against 36 last week and 29 in this week a year ago. Clearings aggregate $95,686,892, a decrease of 2 per cent. from last week, but a gain of 9.7 per cent. over this week a year ago.

TRADE REPORTS.

A fair business has been transacted in New York during the past week in dry goods, and a number of houses report their sales for October in excess of those for the corresponding weeks of 1906. Silks and dress goods have also been active, and cotton goods maintain their position, though there have been a good many cancellations of orders for the latter because of late delivery. Woolens for men's wear are in only fair request and the clothing business is only of moderate volume. Collections are generally pronounced good. Cotton yarns are quiet, manufacturers holding off for better prices. Worsteds and woolen yarns are in good demand and steady in price. Raw silk is slightly lower, but manufacturers are still conservative in their buying. Business in shirts, gloves, neckwear, hosiery and knit goods continues very active, manufacturers having all the orders they can handle and jobbers reporting large sales, in some instances these being in excess of last year. General conditions are regarded favorably, but collections are slow. The local retail trade in these lines is not, however, up to the usual average. In the wholesale notion trade most manufacturers are well stocked, buyers are purchasing only in small quantities, and collections do not show any improvement. The increased tightness of money has interfered with the business of wholesale grocers. Retail trade is active, considering high prices, but the margin of profit is small. Manufacturers of confectionery have all the orders they can fill, and the coming season promises to be a busy one. The prices of raw materials continue high, especially for cocoa beans, and purchases are being made on a limited scale. Collections are generally slow. The flour trade is affected by the drop in wheat quotations, and jobbers decline to buy except when necessary to do so to replenish depleted stocks. The market for butter, cheese and eggs is unchanged, receipts about equal demand, and prices are steady. Receipts of live cattle and dressed meats are fully equal to requirements, but the high price of second grades seriously affects retail trade. A fair volume of business is done in hardware, cutlery, china and glassware, but it is mostly in small orders for immediate wants, and collections are made with difficulty. Pig-iron dealers report a moderate business. Pig tin is slightly lower. Structural steel manufacturers are not doing so much business, and are holding purchasers to terms. Collections are slow and money difficult to get. Copper is still lower and demand is quiet. In the paper trade demand is from fair to good, though it shows a slight falling off. Prices are steady but collections slow.

The following telegrams show trade conditions at the cities mentioned for the week ending October 25:

BOSTON.—Jobbers of dry goods in most lines report less activity, but in some there is urgent demand to meet immediate requirements. Mills and jobbers are disposed to make shipments promptly according to contract and to avoid cancellations of orders on account of delayed shipments. Outside of mills and commission houses there is increasing expectation of a lower level of prices, especially on cotton goods, and there is a check to buying for future requirements at the present level. Cotton-goods manufacturers are holding firm at present, and, it is expected, will announce no lower prices during the current year. In dress goods an active business is being done in broadcloths of staple and popular shades, and in cheviots and serges, both plain and fancy. In garments the demand is mostly for suits, and manufacturers are busy, while skirts are in only moderate request. Trade in men's clothing and furnishing goods is active. Shoe manufacturers are receiving orders for December and January shipment in fair volume. Business is conducted on extremely conservative lines, however, and it is evident that money market conditions are preventing the usual large stock orders for spring goods. Leather is firm, with improvement noted in demand for patent leathers, glazed kid, etc.; colors are giving promise of meeting a fair sale during the coming season. A good, fair amount of business is being transacted in the general paper market, but consumers are still somewhat conservative in buying. The tone of the market is decidedly firm. The various grades of paper stock are in only moderate call, buying being chiefly of a hand-to-mouth order. The old-paper market is showing the most life, and some lines are moving briskly. Demand for anthracite coal is seasonable. Bituminous remains firm in price. Lack of cars from the mines to the seaboard keeps the supply short. An advance of 25 cents a ton has been made recently in the retail trade. Lumber continues dull on most grades. Western lumber and hardwood are a little more active, and northern and eastern lumber is a little firmer. Painters' supplies are in satisfactory demand. Glass is firm and in good demand. Wholesale liquor dealers report a fair business, but trade is not brisk and collections are a little slow. Leaf tobacco continues steady, and purchases are principally made for immediate wants.

PROVIDENCE.—There has been a considerable falling off in sales for the past week in the jewelry trade, and collections are very slow. The machinery and tool trades continue firm. Jobbers in dry goods, fancy goods and notions report a good trade. The lumber market is quiet. Collections are reported very slow. One trust company has suspended and a receiver has been appointed.

PORTLAND, ME.—Wholesale grocery, beef, produce, drug and dry-goods dealers report sales equal to last year at this time and collections fairly good.

PHILADELPHIA.—Wool is quiet and without much change from last week. New business in all branches of textile manufacture is rather slow, manufacturers buying only for immediate wants and hoping for cheaper raw materials. The jobbing dry-goods trade is rather quiet, and retailers complain of poor trade. Collections continue slow. There is a steady demand for flour, but orders are small, prices being considered too high by the buyer. There is no material change to note in the chemical and dyestuffs trades, orders coming in rather slowly; prices are steady, but collections are very slow. Manufacturers and jobbers of paints and glass report an active demand and prices are strong. There is a disposition on the part of conservative hands to scrutinize credits closely, as collections are very difficult, especially among small retailers in country towns. Lumbermen think prices are as low as they are likely to go, and market conditions are more settled, but business is a trifle slow. Tobacco prices are high and firm. Users make numerous inquiries, seeking something cheaper, taking only what they must have now, and hoping for lower rates. The actual amount of business done is small and collections are hard to make. Liquor distillers are very quiet, contracts for the fall of 1907 and the spring of 1908 being held up by the scarcity and high price of money and the advance in price asked on the new goods. Buying is of old goods and only for present needs. About all that can be said for the iron business during the week last past is that there has been no further falling off or weakening in prices, except it be on low grades of pig iron, which are a shade easier. Buying is in small lots, with no disposition to anticipate the future. The demand for coal is exceptionally good and prices strong and advancing, but inadequate transportation facilities hamper trade. The money market is close. Bankers are discounting customers' paper at regular rates, but are reducing lines generally, which has a tendency to reduce the volume of

mercantile and manufacturing business. Conservative financial authorities regard such action as a proper remedy for present conditions.

PITTSBURGH.—The pig-iron market continues very quiet. No sales are reported, though there is some little inquiry, but when quotations are named orders are not forthcoming. Bessemer is holding up well at $22, valley furnace, and basic is no weaker. Finishing mills are receiving specifications more freely, and, if anything, the situation with them has improved. Coke is moving freely under heavy demand from the furnaces, and prices are quite firm. There is very little demand for steel billets. Bessemer is quoted at $28 and open-hearth $30, Pittsburgh. Quotations for spot pig iron at the valley furnaces are as follows: Standard Bessemer, $22; chilled basic, $19.75; No. 2 foundry, $20.50, and gray forge, $20. Standard Connellsville furnace coke is quoted at $2.90 to $3, and foundry coke, $3.25 to $3.50, at the ovens. Jobbers report business good, but collections not quite so good as formerly. The suspension of some large concerns here caused some uneasiness, but conservative authorities think it does not indicate any shrinkage of the volume of legitimate business. The cause assigned for the suspensions referred to is inability to collect outstanding accounts or consummate loans, on account of the tight money market. Financial institutions are believed to be in a sound condition. General business was not affected much by the flurry of the past few days. Following is gathered from local houses: Lumber interests have done an active business the past ten months, trade for that period in some instances being in excess of that done in any previous twelve months. Collections are coming in as anticipated. Wholesale grocers report business plentiful and collections good. Leading hardware houses report more business than ever, and do not find collections slower than in any other period.

BUFFALO.—The dry-goods, clothing and boot and shoe houses report trade active and somewhat increased over last week. The hardware and iron trades report business very brisk, and other lines report trade normal. Some lines report collections improved over last week, while others state they are somewhat slow.

BALTIMORE.—Wholesale business for spring is fair as a whole. Shoe and clothing jobbers report future business in excess of last year, and a very satisfactory business is also reported in dry goods and notions on spring orders. Millinery houses are getting a fair volume of reorders. House trade is quiet. Favorable weather helps local retail trade, which has improved over last week. Straw-hat manufacturers show a good order business. Canned goods prices are advancing, and stocks are lower than for some years. In tobacco, Maryland leaf is in brisk demand and prices are unchanged. Seed leaf is in fair demand, with prices unchanged. Trade in harness is of fair proportions, with a slight improvement in collections. Woodenware dealers report a satisfactory business at firm prices. Crockery and glassware jobbers report collections under normal, with slight improvement in volume of business. Coal shippers and miners report a satisfactory business, with prices firm and demand strong. Collections as a whole do not show any material improvement. Some firms report a slight improvement, while others express disappointment in receipts from customers, particularly in the cotton sections, where cotton has not been moved as anticipated and delayed payments are resulting. The financial excitement in New York has not affected the local money market. Local bankers report no easement in money, and funds available for loan purposes have been over-requested several times by desirable patrons.

CLEVELAND.—Jobbers of staple merchandise report that business compares favorably with last year's, dry goods, clothing and footwear being materially ahead. Collections in those lines are reasonably satisfactory. The iron, steel and metal markets are classed as comparatively quiet, orders being more largely for present requirements rather than for future delivery. Receipts of ore continue large, with dock conditions about normal for this time of year. Shipments of coal to the northwest are retarded considerably by shortage of cars to bring it from the mines.

CINCINNATI.—Little has been done in merchandise lines this week. Country trade has been fair, yet only on actual necessities. Monetary affairs are quiet. The market is stringent. Banks show a disposition to take care of pay rolls and to help industries, no call loans being accepted. Mercantile paper is closely scrutinized.

CHICAGO.—Business is moving along in good volume. Sales of dry goods have increased, cottons being bought freely by western distributers, owing to recent declines in prices. Jobbers are said to be still heavily stocked and some are selling at about cost. Reordering of general clothing and shoes has been liberal. New buying of iron and steel continues to decline, but mills are well supplied with old orders, although they are fast catching up. Pig-iron is weak and output of furnaces is declining, but local furnacemen say they are well sold ahead for the next two months. Coal is selling well to the west, and cars for its transportation are scarce. Western railroads are all short of cars for general traffic, and eastern railroads are getting blocked at terminal points. Lumber is selling in a more limited way than last year. Other lines of merchandise are having a moderate trade. Produce business is fair, with slight changes in prices. Live stock is lower, with increased receipts of cattle and hogs and decreased run of sheep. Chicago banks are in good shape. They have been conservatively conducted and have discouraged speculation. Weaklings have been weeded out. All banks have been examined by the special bank examiners and found to be sound. They are closely loaned up, and rates are strong. The west is a large holder of commercial paper made by eastern manufacturers. Collections are fair. The weather has been favorable for farm work and a little husking has been done in the corn belt, with returns not so good as expected. Seeding of winter wheat is progressing well, and indications are for about the same acreage as last year. The movement of grains from farms is liberal, and high prices are expected to encourage selling.

INDIANAPOLIS. — According to Indianapolis bankers, the flurry in the eastern money markets and New York's financial distress have not been felt or reflected in Indiana. Demand for money is strong, but banks are loaning carefully, and principally for established legitimate business needs. Rates are stiff, running from 6 to 7 per cent. in the city, while reports from parts of the state indicate that many chattel loans are being made at 8 per cent. Collections are slow. The general tendency in wholesale trade appears to be to use care in extending credit.

ST. LOUIS.—Mid-season dullness prevails among jobbers, although a fair volume of filling-in orders is being received by mail, thus showing that the country merchant is having a good trade. Manufacturers of shoes are now operating their factories, a large percentage of the strikers having returned to work. Manufacturers of clothing are showing spring goods, and several large orders have been booked. Warm weather has retarded business among department stores. Millers report flour market conditions the best in years, and prices are firm, with an upward tendency. Export trade both in flour and grain is good.

KANSAS CITY.—Jobbers in leading lines report a steady increase in the volume of sales for future delivery. Demand for merchandise for immediate shipment indicates a healthy condition in this territory. Mild weather does not seem to materially interfere with retail trade. Collections range from fair to good.

MILWAUKEE. — Trade, jobbing and retail, is increasing. Collections are fair.

SIOUX CITY.—Mild weather continues. Trade in all lines is active and of good volume.

DAVENPORT. — Trade in general is good, although some complaint is registered by dealers in heavy goods, as the weather has been too mild for active business. Collections show some improvement.

ST. PAUL.—There is no let-up in the volume of business being carried on, and orders on hand for future delivery are exceedingly heavy. Collections are coming in fairly well, and next month is looked to for a general wiping out of accounts. It is not anticipated that the situation in the east will have any appreciable effect on this market, although the elevators have had to pay as high as 10 per cent. for money to move grain. Still the money is here. Less wheat has found its way to market so far than last year. The flax crop is disappointing. Threshing in northwestern North Dakota discloses only 5 bushels per acre, when 10 was expected.

MINNEAPOLIS.—Conditions in mercantile circles are normal. Jobbers in all lines express themselves as well satisfied with the volume of business done thus far this season, and the amount of reorders received are all that could be desired considering the conditions. Exceptionally fine weather enables farmers to be so busy with fall work, as to have little time for buying goods. The same conditions has interfered somewhat with collections, but no serious complaints are heard. Complaints of shortage of cars are less frequent among grain men, as receipts at country elevators are falling off somewhat, owing to conditions in the money market. Sales of flour are uneven, because of fluctuations on wheat, but buyers are ordering only for immediate necessities. Lumber is quiet.

OMAHA.—Retail trade continues a little quiet on account of very mild weather. Jobbers, however, report trade very satisfactory, many lines showing a substantial gain over previous years. Collections are fair to good.

LINCOLN.—Jobbing trade in general lines is fair. Produce business is active. Warm weather interferes somewhat with retail trade in certain lines, though no complaints are heard. Collections are only fair.

CHARLESTON.—Wholesale trade in all lines is good. Jobbers report some tardiness on the part of merchants meeting maturing obligations, which is due to their holding cotton. The cotton crop is in excellent condition and bringing good prices.

RICHMOND.—A fair number of buyers from nearby territory have been in the market and their purchases were of moderate volume. Sales for spring of shoes, clothing and hats show increases. Jobbers of groceries and provisions have had an unusually good season. Dealers in railway and mill supplies report some recession in business. The loose-tobacco market is active and prices are excellent. Retail trade continues to improve, and collections are fair, in some lines better than last year. In eastern North Carolina the cotton crop is good, only a few localities having had a short yield. Some planters are holding for an advance, but many have sold. The yield of tobacco was fair, but in some sections the leaf was light in weight. The price which it brought, however, was sufficiently high to offset the short weight. In that section business conditions are favorable and jobbers have had a satisfactory fall season.

AUGUSTA.—Collections are somewhat improved. Trade in all lines is active.

ATLANTA.—Business continues brisk and collections are improving. Lumber dealers complain of a decrease in orders. Cotton is moving rapidly, which helps trade and collections.

JACKSONVILLE.—The weather is warm, hence retail trade is quiet. Collections are fair. Oranges are moving at excellent prices. Farmers are in good condition and show a disposition to hold cotton.

BIRMINGHAM.—Southern foundry pig iron No. 2 is quoted at $18.50, with demand light. Trade in general is holding its own for the season. Collections are fair. Lumber is weak in price.

MOBILE.—On account of the warmer weather jobbers report a decrease in spot orders from last week. Collections are somewhat backward. Retail trade, however, continues brisk.

MONTGOMERY.—Trade in all lines is quiet. Collections are poor. The weather is cool and fair, and the bulk of the cotton crop has been gathered.

CHATTANOOGA.—Trade, retail and wholesale, is good, weather conditions being favorable. Building operations continue active. Collections generally are only fair.

MEMPHIS.—Trade, wholesale and retail, is good. Some jobbers report collections slow, others good. Weather conditions are favorable for cotton picking. Receipts are good. Owing to financial troubles in New York, factors and buyers are pursuing a waiting policy, which, with delay in selling sterling exchange, retards sales of cotton. Local banks are in good shape and claim sufficient funds for legitimate requirements.

NASHVILLE.—There is no apparent diminution in the volume of filling-in orders received by local jobbers, and, on the whole, collections are reported to be good, though in some instances houses dealing largely in the cotton belt complain of slowness in payments, which is attributed to the lateness or holding of the crop. Wide fluctuations in the grain market have had a tendency to temporarily check the active trading that has been so noticeable of recent weeks, but dealers are sanguine about the results, and the main obstacle appears to be lack of transportation facilities. Hardwood lumber is in active demand at good prices. Phosphate miners continue to find plenty of customers willing to pay liberal prices, but they experience difficulty in obtaining sufficient cars for expeditious shipping. The local money market is reported in easy condition, with no decided advance in rates.

LITTLE ROCK.—Trade conditions in most lines continue favorable, and collections as a rule are good. Cotton picking is progressing rapidly, but farmers are holding for higher prices.

NEW ORLEANS.—General trade is dull. The strike on the levees appears to be practically adjusted, and the interests involved are looking forward confidently to the active resumption of traffic within the next two or three days. This will have the effect of easing the money tension, and business should speedily improve. Crop conditions are excellent.

WACO.—Trade, retail and jobbing, is only fair. Collections are slow. Heavy rains during the week placed the soil in splendid shape for wheat and greatly helps grass and vegetables.

SAN FRANCISCO.—California banks are in excellent shape, and business seems unaffected by eastern conditions. Collections are slow.

SPOKANE.—The general tone of business in this section is good. Wholesale trade is active. Collections are fair. Labor is well employed.

SEATTLE.—Jobbers report a steady trade in nearly all lines, although collections are only fair. Real estate continues inactive.

TACOMA.—Retail trade is active and conditions appear excellent, barring the lull in the lumber business. Collections are fair.

TORONTO.—A healthy and generally brisk tone is reported to all lines of trade here. Stocks are moving well and the outlook for winter business is bright. Money is still very scarce and the granting of credits is being done with caution. Wholesalers report better collections from nearly all districts. The high prices which farmers are obtaining for grain and produce are largely responsible for this. The farmers are marketing their grain earlier than usual on this account. They are not generally, as is sometimes the case, holding off for still higher figures. Wholesale dry-goods men here state that demands for renewals are not so heavy as they were a year ago. October settlements were good. In some districts of the west, however, collections are still slow. All lines of winter dry-goods are moving well and good sorting orders in fall lines are coming forward. Values are firm. Silks, cottons, linens and woolens continue to advance. Cotton handkerchiefs are reported scarce. An excellent business is being done in the way of fall and winter millinery. There is a fairly good demand for all staple groceries, and shipments to the west and north are heavy. Prices for all lines of country produce hold firm on good demand. A brisk trade is moving in seasonable hardware. Local boot and shoe manufacturers have had good orders for fall and winter lines. Clothing manufacturers have also done a good business.

MONTREAL.—Sorting orders for fall lines are coming in well, and retail trade here and in the country is brisker than a week ago. The money stringency has still a disturbing effect upon business, being largely responsible for declines in the values of Canadian securities during the past week. These declines have also been partly influenced by conditions in Wall street. While lack of money in some cases restricts Canadian industrial enterprises, there is still a brisk tone to all lines of manufacture. In some particular branches, such as textiles, manufacturers are unable to turn out sufficient goods to meet all demands. Deliveries of these lines continue very slow and prices are firm. Wholesale dry-goods men report business good, and they say that, despite all expectations to the contrary, fall business compares very favorably with last year. Values continue to advance. Underwear is going higher, and in some lines retailers will have difficulty in duplicating. The advances in linens are creating a heavier demand for cottons. Demands for hardware keep factories busy. While the demand for builders' supplies has fallen off somewhat, there is still a fairly good movement in this regard. Grocers report markets generally steady to firm and demand for staples good. A good trade is moving in provisions. Receipts of country produce are still light, but butter and cheese have a slightly easier tone. Export demand for cheese is good.

VANCOUVER-VICTORIA.—All lines of wholesale trade report a good movement here; in fact, trade all this year has been heavier than it was last. Values in all lines are firm. Flour and feed prices have advanced sharply. The fruit trade is heavy. The shortage of labor still affects all lines of industry, but activity is general. Retail trade is reported brisk throughout the province, and there is but little complaint in the matter of collections.

WINNIPEG.—The outlook for trade here continues to grow brighter as the season advances. Threshing returns are showing better than was expected, and with grain prices high, country

trade promises well. The grain is being marketed rapidly, and from most districts collections are improving. Grocers report a fairly good business in all staples. Prices on new goods show considerable advances. A fairly good hardware trade is being done, although there is still a quiet tone to the demand for some lines. The cattle trade is showing up well. The demand for good stock is brisk. Country trade is fairly active.

FINANCIAL.

Money Market.

The successive blows to confidence given the happenings in connection with banks and trust companies, as well as the critical conditions in securities, naturally affected the New York loan market most severely. Despite the efforts of the banking authorities to refrain from anything tending to aggravate the strain, there was necessarily considerable calling of loans. The distrust which was created in the minds of a large section of the public also led to the drawing out of deposits, not only from the threatened institutions, but from others about whose position there can be no doubt, with a consequent locking up of funds. As a consequence, there was a sharp rise in call money, which touched 70 per cent. on Tuesday, 90 per cent. on Wednesday and 100 per cent. on Thursday, the latter being a higher figure than was attained since the Northern Pacific panic in 1901, when 75 was the extreme figure. Renewals were in most cases at 50, but the most disturbing element was the inability for a time to effect loans on any terms, and on Wednesday, at the close of the stock market, there was absolutely no funds offering at the Stock Exchange. Conditions on Thursday were similar, despite the announcement made by Secretary Cortelyou on Wednesday night that he would deposit $25,000,000 of Treasury funds in New York banks to relieve the situation. In the afternoon of Thursday J. P. Morgan & Co. appeared as lenders of some $25,000,000 at 10 per cent., which allayed the extreme pressure and broke the call rate to 10 per cent. Another feature was the entire absence of offerings of time money, the rates for which were purely nominal, and practically no transactions of that kind were effected. Commercial paper was, of course, entirely unsalable, the 7@7½ per cent. rates failing to attract buyers. On Friday the call-loan rate ranged from 75 to 50 per cent., but there was a fair supply, and the decided break in foreign exchange pointing to transfers of money from Europe to America had a good effect.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending October 24 shows an aggregate of $3,194,846,000, as against $3,035,925,000 last week and $3,219,857,000 in the corresponding week last year. Canadian clearings for the week aggregate $95,922,000, as against $89,019,000 last week and $97,571,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	October 24	Inc.	Dec.	October 17
New York	$1,948,289,000	....	7.7	$1,778,363,000
Chicago	264,934,000	20.1	....	271,163,000

New York Banks.

Stock market liquidation on an extensive scale was reflected by a decrease of $6,555,600 in the average of loans shown in last Saturday's New York Clearing House statement. The unexpected feature of the statement, however, was a gain of no less than $6,443,100 in the average specie and legal tenders in the face of an estimated actual loss from the movement of currency for the week. This was accordingly surmised to be the result of transfers of money from the trust companies or other sources to the banks. The deposits only decreased $336,000, but the banks had the benefit in their surplus reserve of the entire gain in cash, the surplus showing an increase of $6,527,200, nearly doubling the total of that item. The figures of the statement compare as follows with those of the preceding week:

	Oct. 19	Oct. 12	Changes
Loans	$1,076,846,300	$1,083,401,900	D. $6,555,600
Specie	205,353,300	198,558,800	I. 6,794,500
Legal tenders	62,257,200	62,608,600	D. 351,400
Deposits	*1,025,711,400	1,026,047,800	D. 336,400
Circulation	51,612,400	51,001,800	I. 610,600
Total reserve	267,610,500	261,167,400	I. 6,443,100
Reserve required	256,427,850	256,511,950	D. 84,100
Surplus reserve	11,182,650	4,655,450	I. 6,527,200

The following shows the relation between the respective dates:

	Oct. 19, 1907	Oct. 20, 1906	Oct. 21, 1905
Loans	$1,076,846,300	$1,082,358,500	$1,026,690,100

Foreign Exchange.

Dealings in foreign exchange at New York have been very much restricted on account of the disturbed financial situation and the high rates for money. At times the market was almost stagnant, there being virtually no inquiry for remittances. The supply of commercial bills continues to be small, and on account of the foreign distrust of the speculative and financial conditions in this country, foreign bankers have been very much indisposed to draw with any freedom. On the whole, the market was very heavy, breaking below 4.86 on last Saturday. The posted rates were reduced to 4.82@4.86 early in the week, and actual business in demand sterling was transacted at 4.85.10 or a little higher, the volume of dealings being, however, very small. An incident of the week was the engagement on last Saturday of $1,500,000 for shipment to Germany on "special order." On Friday there was a heavy break in exchange, demand sterling falling to as low as 4.83, which was construed as indicating the transfer of gold from Europe to this country.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Oct. 19	Oct. 21	Oct. 22	Oct. 23	Oct. 24	Oct. 25
4.83 @ 4.87	4.82½ @ 4.86½	4.82 @ 4.86	4.82 @ 4.86	4.82 @ 4.86	4.82 @ 4.86

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.80 @ 4.86.00	4.85.50 @ 4.85.65	4.85.25 @ 4.85.50	4.85.10 @ 4.85.30	4.85.10 @ 4.85.20	4.83.00 @ 4.84.00

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.00 @ 4.82.50	4.81.50 @ 4.81.65	4.81.00 @ 4.81.25	4.81.00 @ 4.81.10	4.81.00 @ 4.81.10	4.78.00 @ 4.80.00

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.85; francs, 5.21⅛ less 1-16@5.18⅛ plus 1-64; reichsmarks, 83¾@94⅝ less 1-32.

The Bank of England's discount rate was left unchanged at 4½ per cent. Its weekly statement on Thursday showed a gain of £96,876 in gold, but the proportion of reserve to liability was 47.21 per cent., against 49.39 per cent. the week before. There was also an apparent increase of some £2,450,000 in the borrowings by the market from the bank. In the London open market call money was firmer at 3 per cent., and discount is 4 9-16@4⅝ per cent. The Bank of France this week showed an increase of 15,000,000 francs in gold, with a decrease of 59,375,000 francs in the bills discounted. Its rate of discount is still 3½ per cent., which is also the Paris market rate. At Berlin the bank rate is unchanged at 5½ per cent., the market quotation for discount being 4⅞ per cent.

A statement on the foreign trade of the United States for nine months ended September 30 shows that its value was nearly two and a half billions of dollars, and that it exceeded by $254,701,272 the figures for the same period last year. Of the total, $1,108,178,744 represented imports, which increased $159,911,627, and $1,331,624,069 exports, which were $93,789,645 greater. Each of the four great classes into which the two groups are divided shows increases except the exports of foodstuffs, which fell off five millions in value. The totals in the several classes and the comparative increases are:

		Increase
IMPORTS.		
Foodstuffs	$232,394,126	$37,078,926
Manufacturing materials	369,377,228	43,634,834

Total	1,331,624,069	93,789,645

* Decrease.

New York Securities Market.

It is some years since Wall street has witnessed as much excitement as that which prevailed this week. In fact, the tension and feeling of anxiety aroused by the banking and trust companies troubles has not been equaled since the disturbance created by the free-silver agitation in the early nineties. With important banks being forced to rely for assistance from the Clearing House; the suspension of one trust company; a heavy run, successfully withstood, however, on another institution of the same kind, and the closing of some smaller banks, not a little distrust asserted itself, while at the same time the necessity under which institutions rested of making preparations for possible contingencies resulted in a further narrowing in the loan market, which constituted the worst feature of the situation. The advance of call money rates, which touched 100 per cent. on Thursday, was of itself less effectual in creating the highly disturbed sentiment and further very heavy declines in values throughout the share list, than the fact that as the week advanced time loans became unobtainable, and there was even positive scarcity of call money. On the other hand, several gratifying features were observed in the situation. Secretary Cortelyou came to New York, examined the situation, and announced that the Treasury would increase its deposits in the banks to the extent of $25,000,000. Only one failure was announced at the Stock Exchange, and above all it was realized that the Clearing House authorities, under the lead of their committee, were doing all in their power to alleviate the strain, and were powerfully seconded by leading financiers, among whom Mr. J. P. Morgan assumed the leading position. In fact, the offering on Thursday, when the money pressure was severest, of $25,000,000 on call by a syndicate

represented by the Morgan firm had a fairly decisive effect, causing a prompt rally from the extreme low prices for leading stocks and creating a widespread impression that the worst had been seen, especially as the Trust Company of America, though still the object of a run unparalleled in New York's financial history, had withstood the pressure. Another feature was the very heavy buying of stocks for investment, particularly in small lots, by bargain hunters, whose presence in the market had not been seen in such numbers since the semi-panic of March last. On Friday the market was very irregular from start to finish. London prices came higher, but the failure of some small New York institutions caused recessions, and it was not until nearly the close of the day that prices had another sharp rally, the drop in sterling exchange rates and indications of a transfer of capital from abroad being the bullish factor.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

	Price		Sales

Annual Report.

The annual report of the Allis-Chalmers Company says that the results for the year ending June 30, 1907, have not been as satisfactory as expected, due to a combination of circumstances beyond control, including the general strike of molders throughout the country; the failure of contractors to complete buildings on time; the delayed delivery of equipment for the new shops, and the large expense contingent upon the organization of the new plant and necessary development of new lines of manufacture. On the other hand, such improvements in methods have been effected that with an increase to over 9,000 in the number of workmen, being more than 38 per cent. for the year, the rate of production per employee per annum is now over $2,000. Following is the consolidated profit and loss account for the year, with comparisons:

	1907	1906
Profit	$1,226,242	$1,036,583
Renewals	1,613,540	....
Deficit	387,298	388,421
Deficit June 30, 1907, as per balance sheet	229,816	* 157,481

* Balance June 30, 1906.

Supplementing the annual report the company gives the results for the quarter ended June 30 and the quarter ended September 30 of the present fiscal year:

	Quarterly total
Gross profit	$780,277.18 $852,836.49
Less general and selling expenses, interest on bonds, etc.	579,919.21 563,926.60
Net profit	200,357.97 288,909.89

The report adds: "Beginning with the last quarter of the year most of the adverse conditions had been overcome and the company entered an era of steadily increasing net earnings, which have continued during July and August of this year. This important result, with the before-mentioned development and growth, the eminent position of your company in many lines, and the large volume of orders on hand, aggregating over $15,478,000 on June 30, 1907, is evidence of future prosperity." At the annual meeting held on October 24 a supplementary statement was issued which showed that the last six months' operations of the company produced a net profit of $489,268. It was explained that it has only been since April, 1907, the first month included in the supplementary statement, that the company has been receiving the benefits of its nearly developed lines of machinery built in the enlarged plant at West Allis, Wisconsin. At the annual election all the retiring directors were reëlected and three new members were added to the board.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Oct.* 18, 1907	*Oct.* 11, 1907	*Oct.* 19, 1906
American	2,000,951	1,795,738	1,892,047
Other kinds	787,876	782,876	748,000
Total	2,788,827	2,578,614	2,640,047

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Oct. 18, 1907	*Oct.* 11, 1907	*Oct.* 19, 1906
Great Britain and continent	1,528,000	1,432,000	1,174,000
Egypt	81,000	64,000	88,000
India	340,000	361,000	416,000
United States	840,000	722,000	964,000
Total	2,789,000	2,579,000	2,640,000

Government Export Statistics.

The details of exports of breadstuffs, animals, meats, dairy products, mineral oils and cotton for the month of September and for the nine months ending therewith compare with similar returns of the preceding year as follows:

SEPTEMBER.

	Quantities		*Values*	
Breadstuffs	1907	1906	1907	1906

Wool Markets.

Boston wool dealers have been placed in a very strong and independent position by the large sales made recently, and while business has quieted down somewhat from the recent great activity, the aggregate of sales for the past week was again above the normal average. Staple wools are scarce and much wanted, and there is a better demand for clothing grades, with an especially increasing demand for wools suitable for French combs. Staple territories are well sold up, and clothing territories are moving in good volume. Idaho and Utah fine clothing sold during the week at 21@22 cents, with fine medium at 21@22 cents. Montana clothing brought 23@24 cents, and Montana and Wyoming half-blood staple 26@26½ cents. Spring Texas is out of stock, though eight months sold at 21@23 cents. Fall Texas wools are quiet in the country, except for the movement on consignment. There is more inquiry for California wools, with a disposition to take up lots sampled some time ago. Fleeces are rather quiet, except delaines, half bloods and three-eighths blood. Half blood Ohio sold at 34 cents, three-eighths blood at 33@33½ cents, and half blood Michigan at 33@33½ cents, both grades being very firm and well sold up. Fine washed delaines are very strong, small lots having sold at 38½ cents, with 39 cents refused for a choice lot. Unwashed delaine sold at 31@31½ cents, with some asking 32 cents. Unwashed and unmerchantable delaine sold at 31½ cents. Fine washed wools are quiet, except sample bags, 34@35 cents being the price for XX. There is a fair demand for fine unwashed at 27 cents and unmerchantable at 29 cents. Scoured wools sold fairly well at 68@70 cents for fine and 64@65 cents for fine medium. Staple Oregon sold freely at 23½@24 cents. Fine A super pulled wool is in steady demand, though Bs are quiet. There is little doing in Australian wool in the Boston market, but Australian markets are very firm and too high for American buyers, though the French and Germans are eager buyers of merinos. Few wools suitable for this country have yet been offered and most of the purchases for this country thus far have been for manufacturers' account. The Geelong sales opened Thursday, no news having yet been received, but predictions are made of very high prices on fine crossbreds, with 64s and above on a parity with the Boston market. Prices in Melbourne have been 1@2d. above the high record of 1899. New South American wools are offered in Boston at about ½ cent under last year's opening, though higher than the old wools.

Boston Shoe and Leather Market.

Leather continues strong in all domestic trades. Sole leathers are absorbed about as rapidly as received. There have been some good sales of kangaroo and satin side leather. Calfskins continue to be in demand. Patent leather has sold fairly well, a decided improvement over the past few weeks. Hides are steady. Buffs are quoted at 10¼ to 10½ cents; southern hides, 8 to 8½ cents. Shoe manufacturers are receiving more orders than they are making goods, thereby accumulating a surplus for the future. Shipments are asked in December and January. Wholesalers are apparently keeping their stocks at low mark, buying for immediate wants. Prices are strong. Shipments continue to compare unfavorably with last year. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 92,603 cases; preceding week, 96,529; last year, 105,794; total for 1907, 3,947,728; total for 1906, 4,156,862; decrease, 209,134.

USE OF THE DIVINING ROD.

Numerous devices are used throughout this country for detecting the presence of underground water—devices ranging in complexity from the forked branch of witch-hazel, peach or other wood, to more or less elaborate mechanical or electrical contrivances. Many of the operators of these devices, especially those that use the home-cut forked branch, are perfectly honest in the belief that the working of the rod is influenced by agencies—usually regarded as electric currents following underground streams of water—that are entirely independent of their own bodies, and many uneducated persons have implicit faith in their ability to locate underground water in this way.

In experiments with a rod of this type, one of the geologists of the United States Geological Survey found that at points it turned downward independently of his will, but more complete tests showed that the down-turning resulted from slight and—until watched for—unconscious changes in the inclination of his body, the effects of which were communicated through the arms and wrists to the rod. No movement of the rod from causes outside the body could be detected, and it soon became obvious that the view held by other men of science is correct—that the operation of the "divining rod" is generally due to unconscious movements of the body or of the muscles of the hand. The experiments made show that these movements happen most frequently at places where the operator's experience has led him to believe that water may be found. The uselessness of the divining rod is indicated by the facts that the rod may be worked at will by the operator, that he fails to detect strong currents of water running in tunnels and other channels that afford no surface indications of water, and that his locations in limestone regions where water flows in well-defined channels are rarely more successful than those dependent on mere guesses. In fact, its operators are successful only in regions in which ground water occurs in a definite sheet in porous material or in more or less clayey deposits, such as the pebbly clay or till in which, although a few failures occur, wells would get water anywhere.

Ground water occurs under certain definite conditions, and as in humid regions a stream may be predicted wherever a valley is known, so one familiar with rocks and ground-water conditions may predict places where ground water can be found. No appliance, either electrical or mechanical, has yet been successfully used for detecting water in places where plain common sense or mere guessing would not have shown its presence just as well. The only advantage of employing a "water-witch," as the operator of the divining rod is sometimes called, is that skilled services are obtained, most men so employed being keener and better observers of the occurrence and movements of ground water than the average person.

MUNICIPAL STATISTICS FOR 1905.

Hoboken, N. J., has the smallest land area of all cities in the United States, having a population of 30,000 or over. It covers only 825 acres.

Duluth, Minn., with 64,942 inhabitants, takes in more territory than St. Louis with its 636,973. Salt Lake City, with a population of 6,554 less than Hoboken, includes an area thirty-five times as great.

These and other interesting facts are contained in a special census bulletin issued recently covering municipal statistics for the year 1905. Of the 154 cities having a population of 30,000 or over, New York had the largest land area—209,218 acres. New Orleans stood second, with 125,000; Chicago third, with 117,447; Philadelphia fourth, with 81,828, and Duluth fifth, with 40,556 acres. These cities were the only ones with over 40,000 acres of land surface. Six cities have over 30,000 acres and less than 40,000. They are St. Louis, Washington, Denver, Des Moines, St. Paul and Minneapolis, with areas in the order named. The other cities covering over 20,000 acres were, in the order of decreasing areas, San Francisco; Salt Lake City, Utah; Taunton, Mass.; Sioux City, Iowa; Los Angeles, Cal.; Cincinnati, Ohio; Buffalo, N. Y.; Cleveland, Ohio; Boston and Springfield, Mass.; Portland, Ore.; Worcester, Mass.; Superior, Wis.; Detroit, Mich.; San Antonio, Tex.; Fall River, Mass.; Wichita, Kans; Manchester, N H.; Seattle, Wash., and Haverhill, Mass.

The total indebtedness of the 154 cities in 1905 was $1,618,414,005, of which $1,444,725,797 was classed as "funded," and the remainder as "floating." The municipal income from waterworks in 1905 was $47,657,957, of which amount New York City received $9,748,870. The aggregate receipts from docks and wharves were $3,458,658, of which amount New York City alone received $3,097,950.

The same census report presents a brief résumé of the laws of various cities relating to the licensing of dealers in and manufacturers of intoxicating liquors. It gives for 154 cities the fee required for all classes of liquor licenses and also the number of each class of licenses issued. Of licensed saloon keepers and clubs there were for 154 cities an average of 32.1 for every 10,000 inhabitants. These saloons were relatively more numerous in the larger cities and less numerous in cities containing from 50,000 to 100,000 inhabitants. In cities having a population of over 300,000 they number 34 per 10,000 inhabitants; in cities having from 100,000 to 300,000, 31.5; in cities having from 50,000 to 100,000, 28, and in those with less that 50,000, 29.5. According to these statistics the people of our cities support one saloon or club for every 315 people.

DATE CULTURE ON THE DESERT.

"We think of the date as an article of luxury, or at best as a very agreeable dessert fruit. An abstemious people like the Arabs think of it as an important staple article of ordinary diet. The food value of the date is large, and, while it is not likely in this country to take a place among the articles of common diet, the only reason why it will not do so is that it will be rather too costly. And the higher the price of a commodity the more profit there is in producing it," says the San Francisco *Chronicle*.

"Conditions in southern Arizona and southeastern California are virtually identical with those in northern Africa, where the date comprises a large portion of the food of the people. The date palm, when well grown, produces very abundantly and requires little care. Three requirements are essential for the production of the desirable varieties of dates—a long, frostless season, a very hot sun and a great abundance of water. The two former can be found in perfection anywhere in the Colorado desert and the lower parts of Arizona. Wherever to those an abundance of water can be added there is no trouble in producing excellent dates. It is in such situations that the Department of Agriculture has established one or two date plantations, partly to demonstrate the possibility of successful date culture, and partly to supply suckers from approved varieties for private plantations. The necessity of government action arises from the difficulty, uncertainty and expense of procuring the original trees from Africa. There are as many varieties of dates as of apples, and as much difference in them. The African date-growers are quite alive to the value of their virtual monopoly of the date industry. The date palm is propagated from suckers which grow at the roots of bearing trees. All date suckers look alike to most people, and the African followers of the prophet are quite equal to palming off any old date sucker on intrusive Yankees seeking to break into the trade. Consequently, it required the resources of the national government to obtain a sufficient supply of suckers of the desired varieties to start us in business and make sure that when they bore they should be found of the right kind. The government found a suitable spot, which was appropriately named Mecca, in the Imperial valley or in that vicinity, where the principal date farm is located. There is also a farm in the Salt river valley, in Arizona, where dates do well, but owing to the elevation and occasional severe frosts, the location is not so good as at Imperial. The trouble is with the young trees. When they grow up out of the reach of the frosts they are all right in the Salt river valley."

FORESTRY AND FOREST PRODUCTS.

A writer in the Boston *Transcript* says that "some one has said: 'This world was given to mankind and to trees as cotenants. It was given to them on equal if not on precisely similar terms, for although man, by reason of his intelligence and skill, is superior to the trees and can exercise a mastery over them, yet, on the other hand, they are indispensable to his welfare. They are not dependent upon him, but he is dependent upon them. There can be no life without them. Without them the atmosphere, instead of causing the pulses to throb with health, would choke them with its mephitic influence, and the earth would be converted into a lifeless desert.'

"Waving aside the possible exaggeration in this statement, it nevertheless is a fact that trees are of vital importance to our well-being. As a people we have been slow to recognize this truth. We have cut and slashed our great forests in the most wasteful manner, forgetting that there was any limit to our resources, and made barren wastes of great areas of country. The stern logic of events, however, finally brought to the attention of the thoughtful the absolute peril that confronted us. Then forestry, which has been practiced in other countries for hundreds of years, was invoked to prevent the utter destruction of our standing timber.

"To illustrate the situation in figures, the approximate annual output of forest products is given as follows:

	Quantity	*Value*
Lumber, board feet	35,000,000,000	$560,000,000
Firewood, cords	100,000,000	350,000,000
Shingles, lath	....	30,000,000
Hewed crossties	70,000,000	30,000,000
Cooperage stock	....	25,000,000
Turpentine and resin	....	25,000,000
Pulpwood, cords	3,000,000	25,000,000
Timber exported (unsawed)	....	10,000,000
Mine timber, posts, etc	....	30,000,000
Total annual value		1,075,000,000

"Lumber consumption has increased more rapidly than population. From 1880 to 1900 the population increase was 52 per cent. and the lumber-cut increase was 94 per cent."

"Since 1880—twenty-six years—the lumber cut has aggregated 706,712,000,000 board feet.

"The present estimated stumpage of the United States is as follows (M. board feet):

	Census, 1900	*Fernow*, 1902	*American Lumberman*, 1905
White pine	50,000,000	....	....
Eastern and northern pine	....	....	55,000,000
Southern yellow pine	300,000,000	....	300,000,000
Eastern spruce	50,000,000	....	75,000,000
Eastern hemlock	100,000,000	....	100,000,000
Douglas fir	300,000,000	....	350,000,000
Western yellow pine	125,000,000	....	250,000,000
Cypress	65,000,000	....	65,000,000
Redwood	75,000,000	....	75,000,000
Sugar pine	25,000,000	....	50,000,000
Other conifers	....	....	250,000,000
Total conifers	1,090,000,000	....	1,570,000,000
Total hardwoods	300,000,000	....	400,000,000
Region—			
Northern states	....	500,000,000	....
Southern states	....	700,000,000	....
Western states	....	800,000,000	....
Total	1,390,000,000	2,000,000,000	1,970,000,000

"In board feet, Fernow's estimate is therefore 2,000,000,000 feet. We are consuming this at the rate of exceeding 20,000,000,000 cubic feet per year. To produce this quantity of wood without impairing our forests of 700,000,000 acres they must make an annual increment of thirty cubic feet per acre. Under present conditions the average annual increment is probably less than ten cubic feet per acre. This means that each year's cut at the present rate takes the growth of more than three years. If there were no annual increase these figures would mean that our forests would disappear in twenty or thirty years, but there is an annual increment even under our present wasteful methods of about 33 per cent. of the yearly cut, which would give our forests a life of forty or fifty years. Under scientific management, however, it would be possible to make our forests yield the necessary annual increment of thirty cubic feet per acre to meet the present demand. Indeed forestry experts claim that this figure could be exceeded and the forest made to meet the larger demand of an increased population.

"Take the single item of hardwood. Enormous quantities are required each year for railroad ties, telephone and other poles, piles, fence posts and fuel, and a great amount is wasted in lumbering and manufacture. The present lumber cut of 7,333,333,333 feet represents probably not one-third of the hardwoods yearly used. Twenty-five billion feet are given by William L. Hall, assistant forester, as the yearly cut. The amount of standing hardwoods is still more uncertain. The largest estimate sets the figure for hardwoods at 400,000,000,000 feet. If we are using hardwoods at the rate of 25,000,000,000 feet per year, this would mean a sixteen years' supply. Of the four great hardwood regions, the Ohio valley states have been almost completely turned into agricultural states, and the lake states and the lower Mississippi valley are rapidly following their example. In the Appalachian mountains we have extensive hardwood lands which have been culled and greatly damaged by fire. These are practically all in private hands, and while they contain a large amount of inferior young timber, they are receiving little or no protection, and even such young timber as exists is making but slight growth. South of Pennsylvania there are in the Appalachians 58,000,000 acres of forest land, practically all of which is covered by hardwood, and over 85 per cent. of which is in a cut-over or culled condition. Including the mountains of Pennsylvania, New York and New England, it is probably safe to estimate that the entire Appalachian area includes as much as 75,000,000 acres primarily adapted for hardwood timber. Well managed and protected from fire, these lands, it is claimed, are capable of producing fifty cubic feet of wood per acre annually. Even taking the production as forty cubic feet, this means for the area of 75,000,000 acres a possible annual production of 3,000,000,000 cubic feet. As the Appalachians would probably not be called upon to furnish more than three-fourths of the total supply, it would appear that there is a margin of safety in this estimate. Therefore, if the Appalachian forests are rightly managed and taken soon enough, they will insure at some date in the far future continuously the hardwood supply of the country, and do it without exhausting the forest. Much of the Appalachian forest, however, has been so damaged that years will be required for it to reach again a high state of productiveness. Its present average production is probably not over ten cubic feet per acre per year. The increase, therefore, would be gradual and very slow at first. Until it can average forty feet per acre we can expect a shortage in hardwood timber. There is no other use to which the surface of these mountains can permanently be put. That they cannot be successfully farmed has been proved in thousands of cases. For the most part, they cannot even be permanently grazed."

THE PANAMA CANAL AN AMERICAN MECHANICAL EXHIBIT.

"The Panama canal project has had the good fortune of late to withdraw itself largely from the public eye, but such reports as are coming from the isthmus are most satisfactory, in that they record a steady and almost phenomenal progress. When the decision was reached some months ago to transfer the project to the hands of the army engineers, there were many critics who foresaw in the inevitable red tape intermingled with everything military, a heavy loss in the efficiency of the isthmus forces and a marked recession from the rate of activities set by those earlier in charge," says the *Iron Trade Review*. "But the gigantic task was assigned to the best engineering ability in the army, and this view of the situation proved to be entirely unwarranted.

"Engineers and equipment manufacturers who have recently visited the isthmus state that, remarkable though it may seem, the Culebra cut is being pushed to better advantage than some current excavating jobs of magnitude in the vicinity of New York City. One-fifth of the total estimated material has already been removed, July set a new record of well over 1,000,000 cubic yards, and there is every reason to predict a steady increase in the rate of operations there. All along the route the transportation factor has been developed to a high state of efficiency, steam shovels and dredges are doing even better work than was expected of them, and foundries and machine shops are running in a manner that would be entirely creditable to similar establishments in the States.

"This is all very gratifying as a canal-digging proposition. The cost for the current year will aggregate an immense figure, largely exceeding the original estimate of $26,000,000; but in this connection the fact is not to be overlooked that, directly or indirectly, practically all the canal expenditures revert to the profit of the American manufacturer. Of the year's estimated expenditures, $12,000,000 in round numbers covers the item of equipment and goes directly to domestic makers without even leaving the country. Perhaps $4,000,000 additional is also spent directly here for commissary and other supplies, and of the remaining $12,000,000 the major portion by far represents the labor expenditure, of which, it is safe to say, three-fourths eventually returns to the United States. In short, the American manufacturer is finding the Canal Commission a generous customer.

"There is, however, another, though less generally recognized, reason for self-congratulation at the satisfactory status of canal operations. The isthmus is admittedly the gateway to the South American continent, particularly to that long stretch of western coast where mining and manufacturing interests are springing into existence. Furthermore, steamship schedules are such that travelers to and from the western coast usually have several days at their disposal on the isthmus, sufficient time to inspect the canal strip with a measure of thoroughness. The entire strip is one vast exposition of the best the United States has developed in a wide variety of mechanical lines. Dredges and shovels, railway lines, conveying machinery, repair and machine shops, all directed with typical American energy and skill, are gradually shaping the canal course, and the interested traveler has the opportunity to see them in successful operation under the most trying circumstances.

"Two thousand miles from New York and at the very entrance of an undeveloped land which is rich with promise of future markets, this exposition of industry and mechanical skill is maintained without interruption. Already it has had a very appreciable effect in widening the southern continent's acquaintance with our methods and products, export houses finding evidence of this fact in increased sales to that territory. It is also encouraging to note that some twenty-five leading manufacturers, following up this advantage, have recently placed trade representatives in South America, while others are planning a similar course. Whatever one may think of the wisdom of the canal undertaking, one must admit that, as an advance agent for American machinery and men in South American markets, its effect is certain to be important."

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

SATURDAY, NOVEMBER 2, 1907.

Always in times of financial unsettlement there is a tendency to compare with conditions in other years of great excitement, the object apparently being to draw analogies, some of them of a very depressing character. This year is no exception to the rule, but those who believe that history is about to repeat itself along similar lines should not forget that 1893 and 1894, years frequently mentioned in connection with current predictions, were years when foreign and domestic demand alike were more restricted; when the basic industry, agriculture, was miserably poor and badly situated, and when overproduction of manufactured products put a great strain upon productive forces, necessitating the dumping in later years of large quantities of our products upon the foreign markets, thus marking the entry of the United States into the world's markets as a distributer of surplus manufactures as well as of crude products. It is well in times like these to recall the fact that while history sometimes repeats itself, it has not, so far as can be seen, repeated itself this year along unfavorable lines exactly identical with those in the former depressed period; that the country at large is still in a high degree prosperous; and while we are probably now heading toward a period of reaction and repair, there is no reason for undue worriment or for panicky abandonment of safe, sane and conservative management of affairs financial and commercial. So far the movement toward a readjustment of affairs upon a more solid basis has proceeded with a fair degree of orderliness and with strikingly little disarrangement of previously existing basic conditions, or with any important revelation of essentially unsound elements in the general commercial fabric. If to be forewarned is to be forearmed, there are some very good reasons for believing that the numerous predictions current of future trouble are to be taken with a considerable allowance for deviation from the possible actual results. Certainly there are few political, industrial or social conditions now existing akin to those that faced the country in the years above mentioned, and it is taking counsel of our fears to believe that with the changes in all factors, in the diversity of our resources and in the level-headed character of the country's population, we are facing conditions similar to those ruling just previous to years of prolonged or acute depression.

What may prove to be a step fruitful in results has just been taken by Secretary Straus of the Department of Commerce and Labor. This is the issuance of an invitation to the chambers of commerce and boards of trade of a number of the leading cities of the country to appoint representatives to meet at Washington on December 5 to consider ways and means for rendering the department of greater service to the commercial interests of the country, with the natural result, doubtless, of securing the coöperation of those interests. The suggestion is made in a pamphlet emanating from the department that the chambers of commerce and similar organizations could help the department both by furnishing useful information and advice and by helping to disseminate the information which it can give to the business community. Moreover, the mere knowledge of the fact that the department desires and can use such information would, it is urged, prompt those organizations to communicate facts to the department which now frequently remain unknown for want of a proper understanding of their importance or for lack of established avenues of communication and dissemination. In like manner, American chambers of commerce abroad might be made to render useful service to the country. There can be no two opinions about the desirability of coöperation of the kind suggested by Secretary Strauss, and it is to be hoped that good results will follow the meeting he has arranged for.

Disclosure was made at the end of last week of the interesting fact that the governors of several of the southern states, whose legislatures reduced railroad rates this year, were making an energetic effort to reach an amicable settlement of the difficulties precipitated by the enactment of the rate laws. The governors principally concerned were those of North Carolina, Georgia, Alabama and Virginia. The course of events in the last few months apparently demonstrated to the officials of the states as well as of the railway companies the desirability of finding some practicable way out of the controversies that arose from the legislation affecting rates. A disposition to make concessions made itself apparent at conferences recently held between some of the governors and certain railroad officials at the national capital, and the suggestion for a general conference was the result. It was reported a few days ago that a tentative agreement had been reached between the governors which contemplated the setting aside of the low rates and the substitution of a uniform rate of 2½ cents a mile instead. The incident is a most encouraging sign of a disposition to waive extreme views in quarters where they have lately been held with some persistence.

It appears that some progress is being made by the Customs Commission now traveling in Europe in the matter of smoothing away difficulties growing out of the administration of the customs regulations of the various countries. We learn, for example, that the commission, which has lately visited London, has had a satisfactory conference with a committee composed of officials of the British Board of Trade. One of the principal questions discussed was that of the certification of invoices by local boards of trade and chambers of commerce, a matter which was the subject of much consideration in the tariff negotiations with France and Germany some time ago. According to report, the agreement was reached that the British government, acting through its Board of Trade, should investigate those bodies and recommend those found competent to undertake the work of certification. A number of those organizations have already been accepted by the American commission. This work is of a kind which would seem to permit, if not to require, coöperation with the officials of the Department of Commerce and Labor, which is showing signs of increased activity in its own special lines.

Preparations are well under way for the conference of representatives of the Central American republics which is to open at Washington on November 10. It is expected that out of compliment to the United States Secretary Root will be chosen honorary president, but he will immediately afterwards surrender the gavel to the actual president, who may be chosen, it is said, in the person of Señor Godoy, the Mexican chargé d'affaires at the capital. It will be the effort of the American and Mexican diplomats to remain as much as possible in the background during the proceedings, so as to avoid any imputation of having unduly influenced results. They will strive, however, to have the questions before the conference confined as far as possible to the future, removing matters of past contention from the consideration of the delegates. That way, in their opinion, the hope of success for the conference lies, and they are, above all, anxious that the gathering shall bring about results looking to the maintenance of peace in Central America for the time to come.

It is announced in dispatches from Washington that Oklahoma will take on its full stature of statehood on November 16. President Roosevelt received a copy of the constitution adopted by the people of the territory in due form on Monday. The copy of the constitution was, in conformity with the provisions of the enabling act, presented to the Chief Executive of the nation by the governor of the territory of Oklahoma and the senior federal judge of Indian Territory. It is well known that the constitution of the new state contains provisions which the President does not approve, and on Monday he remarked that he had received many protests against provisions of the document. A number of these protests had been examined by him in consultation with the Attorney-General, and some remained to be examined. Those already considered by him were, he said, not of a nature to alter the conclusion reached by him previously, namely, that it was his duty to sign. In response to a request for information as to the date of his proclamation, he indicated November 16 as the date of its issue.

About the middle of last week Judge Holt of the United States District Court, in appointing a receiver for the Wall street firm of Mayer & Co., filed an order restraining the firm from disposing of their assets and also enjoining all creditors or other persons or corporations holding any of the assets of the firm or in which they had any right, title or interest, whether as owners, pledgors or pledgees, from selling, disposing or otherwise parting with any of such property. An application was subsequently made to Judge Holt by the Chase National Bank for a modification of the order so that it could dispose of hypothecated securities which it was holding as agent for several of the secured creditors. Judge Holt declined to modify the order and the bank thereupon appealed to the United States Circuit Court of Appeals for the Second Circuit. That court has handed down a unanimous decision reversing Judge Holt's restraining order on the ground that in making it the District Court had exceeded its authority, and that the agreement entered into between the firm and the bank, whereby the latter was authorized to sell its collateral holdings at any time upon due notice being given, was a legally valid agreement and should be enforced. There is an intimation that the very important question involved in the case may be brought for review to the court of last resort.

RECUPERATION AND REPAIR.

Events have moved with rapidity during the past week. Threatened financial disorganization at New York and other large cities of the country has, however, been met and checked by the concerted action of leading financiers headed by the members of the New York Clearing House committee, whose efforts were ably directed or supported by Mr. J. Pierpont Morgan and others. As will be seen from the following chronological statement of the daily happenings, the principal factor was the decision of the Clearing House at New York to issue certificates against the bills receivable and other securities of its members for use in the settlement of daily balances, this being the first time since the trying days of 1893 that this plan has been adopted. The clearing houses in other cities fell into line and followed New York's example, with a view to averting the ill effects of the panicky feeling and the locking up of cash by the public, which was one of the natural consequences of the runs upon different institutions and the suspension of some. Thus was checked the spreading of the distrust arising from the troubles in connection with the Mercantile National Bank of New York, the suspension and receivership of the Knickerbocker Trust Company, and the severe run upon the Trust Company of America, which latter institution, thanks to the aid of the other trust companies and of the Clearing House, has successfuily weathered the storm. Moreover, New York bankers lost no time in procuring large amounts of gold from Europe, and about $27,000,000 is now on the way to this country from abroad, shipments coming not only from London and Paris, but from far-away Argentina. Rigorous methods, it is true, have been adopted to alleviate the strain, including requests to depositors in the New York institutions to draw all checks as being payable through the Clearing House, thus copying the method adopted during the currency famine of 1893.

Furthermore, Stock Exchange interests received informal but sufficiently effective notice that they must not at this juncture indulge in any large speculative buying which would tend to materially increase the volume of loans, and this, although it led to severe liquidation on last Tuesday and Wednesday, has had a healthy and beneficial effect. A very noticeable feature of the proceedings has been the extensive investment buying of securities, particularly in small amounts, a movement which would undoubtedly have assumed larger proportions had it not been for the action of the savings banks, which with propriety, under the circumstances, universally resolved to adopt the requirement of sixty days' notice for the withdrawal of deposits.

The following gives the events of the week in detail, and exhibits the gradual recuperation which has been in progress:

October 26.—New York Clearing House authorizes issue of certificates. Announced other cities will follow New York's lead. Many trust companies apply for membership in Clearing House. Also announce that all possible payments by trust companies will be through checks upon Clearing House banks. Weekly bank statement shows loss of $12,900,800 in cash, increase of $10,864,700 in loans, decrease of $1,939,400 in deposits and decrease of $12,415,950 in surplus reserves. Stock market strong. Margin dealing greatly reduced. Large sales of copper.

October 28.—Situation much calmer. Gold engagements total $20,000,000. Runs on trust companies beginning to disappear. Collapse in wheat market. Western market dealings largely suspended, except for cash. Restriction of stock market dealings to cash transactions. Money pools dissolved as no longer necessary. Copper advances sharply. Money rates abroad advance as a consequence of gold engagements from America. A Kansas City trust company suspends. The governor of Oklahoma declares a week's holiday, and the governor of Oregon declared a holiday period of four days. Clearing-house certificate system adopted at most large cities, and at others cash withdrawals limited to from $25 to $100 per depositor each day.

October 29.—Imperial German Bank advances discounts 1 per cent., to 6½ per cent. Large sales of wheat for export for cash. Large demand for currency (small bills). Banks enforce conservative dealings by Stock Exchange. United States Steel report favorable, though orders decrease. Copper markets abroad excited. Reports of industrial restriction, notably railroad work. Stocks decline sharply on liquidation of high-priced issues carried over in loans. New Haven Railroad buys New York traction lines. Copper concerns at Butte reduce wages, taking effect November 1. Grain markets rally. Management of lines in Consolidated Steamship Companies reverts to individual concerns.

October 30. — Knickerbocker Trust Company's checking committee predicts suspended institution will pay in full. New Orleans bankers apply for Treasury assistance to move cotton. Kessler & Co., New York, assign. Union Pacific plans great holding company. Washington reports that Comptroller of Currency will induce banks to increase circulation and that the mints will rush work of coinage. Cash in New York City's suspended banks deposited in Clearing House banks by State Superintendent of Banking. All runs ended. California Safe Deposit & Trust Company, San Francisco, suspends temporarily. Immense sales of securities reported in fractional lots. Call-money rates ease after liquidation of high-priced stocks. Sharp recovery late on easy money (3 per cent) on Stock Exchange. Mayor of New York City orders that no more city contracts be authorized. New York City banks ship small currency west. Premiums paid for small bills.

October 31.—Strain on interior exchanges. Heavy demand for currency. Bank of England loses $15,000,000 in gold reserve, and advances discount rate 1 per cent., to 5½ per cent. Complaint of banks returning checks on trust companies stamped "non-collectible." Further engagements of gold, making total amount arranged for $24,500,000. Call money rates 45 to 3 per cent. Stock market weak, strong and weak again by turns. Large interior shipments of currency from New York. Chicago banks engage $2,500,000 gold in Europe. Several trust companies apply for admission to New York Clearing House, which will appoint experts to verify statements as to proportion of active banking accounts operated. Holidays in California and Washington for benefit of banks not observed in some cities, where banks did business as usual. New York City sells $30,000,000 of 6 per cent. revenue bonds to syndicate of bankers.

November 1. — Interest and dividend payments $120,000,000. National banks follow recommendation of Comptroller Ridgely and increase circulation. Amount involved estimated at $40,000,000. President of Pennsylvania announces that his road will go slowly on new work in 1908. Atchison president announces work on $7,000,000 improvement will be suspended. Small bank in Portsmouth, Va., suspends. Chicago banks engage more gold abroad; total to date, $4,000,000. Pennsylvania declares usual dividend of 3½ per cent. Receivers of Knickerbocker Trust Company take charge. Call loans on Stock Exchange, 25@3 per cent.; time, 12 per cent., ninety days. Most foreign markets shut [All Saints' Day]. Foreign exchange rises sharply. New gold engaged, $4,500,000; total, $27,000,000.

A FAVORABLE SIDE TO THE WEAKER COMMODITY MARKETS.

Commodity prices, especially of the cereals and other food products and of cotton, have reflected, a little later than have the quotations for securities, the acute effects of the financial stringency and of the dislocation of the usual facilities for forwarding products to market. In this respect they have again controverted the ideas often voiced that the great producing and consuming interests are independent of and not interested in the convulsions which have afflicted the banking interests in several leading cities. In the cereal markets the features in the prices situation easily were the declines of 3 cents in wheat, of 25 cents in flour, of 1 cent in corn and of 4 cents in oats, accompanied by reports of the disorganization of speculative dealings on the exchanges of leading cities. At some cities all operations but cash dealings were reported suspended on various days. This occurred, too, despite a continuance and in fact an accentuation of the foreign demand for our breadstuffs. Similarly some sharp declines were noted in provisions, especially pork, and cotton-seed oil. Perhaps the sharpest fall was in cotton, which lost 30 points early in the week, an indication that the long-continued holding movement of this staple was weakening in face of the necessities of holders or of those carrying that product. These declines this week were, however, only a continuance of the forces previously at work in different lines and having their origin in the prolongation of the strain in financial circles. Thus cash wheat is 6 cents below the highest price of the year, while corn and oats, owing partly to changes from old to new crop conditions, are 11 and 10 cents lower respectively. Cotton is 1 cent lower than a month ago and 2¾ cents below the highest of the year, reached in the first days of the new crop season. Perhaps the most extreme decline of any one product so far was that shown in copper, which partly, because of financial stringency early and resulting evident overproduction later, broke to below 12 cents from nearly 25½ cents early in March, since, however, getting back a portion of this loss.

While these sharp declines have their serious side to holders of commodities, there is, on the other hand, much that is hopeful from the standpoint of the improvement of our export trade, and consequently of our ability to draw fresh supplies of liquid capital to this country. It is true that a chance is offered for mathematicians to figure out the loss which the country has suffered by the passing of the very high prices, but there is the consolation afforded us of knowing that there is a foreign demand existing which will materialize "at a price," and that following the passing of this "credit cyclone" there has developed a good demand for the country's surplus products. Here again the item of copper becomes prominent. It is apparently beyond question that at the low prices struck last week for this commodity an active demand, whether speculative or otherwise, sprang up, which is said to have resulted in immense sales, largely for export. Similarly our wheat, flour, corn and cotton have been freely bought at, on the whole, good prices, though perhaps, as in the case of cotton, greatly below the expectations of some holders, who have believed that they could get 15 cents per pound for their product. It is worth noting, also, that many of the products are still far above the low prices of the year, and also above the quotations made a year ago at this date, when the export movement was heavy. Copper, it is true, is 8 cents lower than a year ago and 12 cents below the high price of 1907, while cotton is nearly 3 cents below the 1907 high price and only about equal to last year's quotation; but wheat is still 29 cents above the low price of last January, while corn is 18 cents and oats are 13 cents higher, and these three commodities are still 28 cents, 15 cents and 15 cents respectively above the prices ruling at this date last year.

This latter is, indeed, one of the most encouraging features of the present disturbed condition of affairs and in sharp contrast to conditions ruling in other years of stress. We seem to have comfortably large supplies available for eager foreign buyers, and, unlike some other years, we are getting good prices for the surplus.

SUGGESTIONS AS TO LEGISLATION ON TRUSTS.

The question how to secure the benefits arising from the control of combinations while at the same time removing undue restrictions upon legitimate enterprises occupied the chief share of the attention of the Civic Federation at its trust conference at Chicago last week. Before adjourning, the conference adopted resolutions setting forth its suggestions upon this general subject. It is recited in the preamble that after twenty years of federal legislation as interpreted by the courts, directed against the evils of trusts and combinations and against railroad rebates, beginning with the interstate commerce act of 1887 and the anti-trust act of 1890, a general conviction exists that the experience gained in enforcing these federal acts and others succeeding them demonstrates the necessity of legislation which shall render more secure the benefits already gained and better meet the changed conditions which have arisen during a long period of active progress both in the enforcement of statute law and in the removal of grave abuses in the management of railroads and corporations. It is insisted that immediate legislation is required, following the recommendation of President Roosevelt and the Interstate Commerce Commission permitting agreements between railroad corporations on reasonable freight and passenger rates, subject in all respects to the approval and supervision and action of the Interstate Commerce Commission.

Regarding the proceedings looking to the enforcement of the Sherman act under the administrations from that of President Harrison to the present one, the view is taken that great national results have been obtained in awakening the moral sense of the American people and in asserting the supremacy and the majesty of the law, thus effectually refuting the impression that great wealth and large corporations were too powerful for the impartial execution of the same. In the opinion of the conference, all property rights have been thus rendered more secure, resting as they must under a popular government on universal respect for and obedience to law. Now, however, that the work is accom-

plished, the necessity has been revealed for legislation which, while maintaining all that the Sherman act was intended to secure, will safeguard interests that much discussed piece of legislation was never expected to affect. Dealing more specifically with the matter in hand, the conference suggests that any proposed legislation should include modifications of the prohibitions now resting upon combinations of the following nature, viz: (1) National and local organizations of labor and their trade agreements with employers relating to wages, hours of labor and conditions of employment; (2) associations made up of farmers, intended to secure a stable and equitable market for the products of the soil, free from fluctuations due to speculation; (3) business and industrial agreements or combinations whose objects are in the public interest as distinguished from objects determined to be contrary thereto.

As an immediate step in the direction of bringing about the kind of legislation needed, the conference suggests the enactment by Congress of a law providing for the appointment of a non-partisan commission to look into the whole matter, and whose purpose it should be, among others, to execute the determination of the American people to secure in all industrial and commercial relations justice and equality for all, with full sympathy and loyal support for every effort to enforce the laws in the past. In the personnel of this body, it is urged, the interests of capital, of labor and of the general public should be represented. In particular, it is suggested, the commission proposed should make a thorough inquiry into the advisability of inaugurating a system of federal license or incorporation as a condition for the entrance of certain classes of corporations upon interstate commerce, and also into the relation to the public interest of the purchase by one corporation of the franchises or capital stock of another. The resolutions adopted are distinctly moderate in tone and read as if they were the outcome of a disposition to seek common ground rather than to press for the adoption of extreme points of view. The proposition to have the situation looked over carefully by a commission has certain decided advantages. We are used to legislation based on the reports of commissions. Such bodies are useful as means not only of eliciting information to be looked at from a general point of view, but also of moderating or reconciling opinions and of affording time to cool. No harm could result, but much good might be attained if the President should recommend and Congress should provide for such a commission.

IRON AND STEEL AND DEPRESSION.

Apropos of analogies, it may be said that there is one industry—iron and steel—that has with the passing of recent years developed great power for resisting the adverse influences of depressions. It is true and obvious that the industry, like others, will always be sensitive to the changes wrought by trade currents, but the main point is that conditions to-day differ vastly from those which prevailed in 1893. Indeed, the picture is much more pleasing to the eye. A glance at the situation shows that there is some competition for business at receding prices, but not the cutthroat competition of other days. The industry is now more unified; there is not a multiplicity of plants engaged in piling up stocks against the time when the market would turn for the better, and when, by being ready with supplies, an advantage over a rival might be obtained. In other words, the general disposition of all in interest is to act in concert for the common good, which means that in order to meet the exigencies of the present occasion, production will be curtailed in preference to accumulating burdensome supplies.

Of this we began to receive evidence some few weeks ago, but within the past week the movement has become accentuated. Thus we find that the leading interest had a stock of only 88,000 tons of pig iron on October 1, that quantity being only a few days' supply, and yet the corporation is blowing out furnaces, the most recent returns indicating that fourteen are idle. It is also very probable that a number of steel foundries will reduce outputs as the circumstances warrant. Many tinplate and sheet mills have suspended operations, the shortage in the season's fruit crops being responsible for a heavy falling off in orders for tinplate. In the coke-producing regions steps will be taken to reduce production just as soon as it is found that the product will not directly go into consumption. This restricting of outputs to conform to market requirements will obviously tend to eliminate burdens, and will also superinduce greater recuperative powers once conditions assume a more favorable phase, which leads to the belief that as bright days have been, so shall bright days be once more.

Now, while no one likes to see a recession in trade, especially after having become accustomed to prosperity, it is nevertheless a fact that periods of depression have compensatory features. Thus, when activity reigns supreme, operating forces are apt to become mediocre in character, labor becomes more arbitrary, indolence develops, costs are run up, and discipline is destroyed to a considerable extent, and it is only when the slump comes that corrective measures can be applied. Moreover, prosperity generally causes technical staffs to subordinate problems connected with innovations and improvements to the demands of current activity. In fact, it may be said that some of the advanced practices seen in present day blast-furnace and steel-mill operations are products of depressed or comparatively dull times. It is in such periods that the master builder oftentimes evolves his plans—the plans that are destined to produce the economies of the morrow.

THE STEEL CORPORATION'S SEPTEMBER QUARTER.

There was nothing very surprising, but considerable that was encouraging, in the report of earnings for the September quarter of the United States Steel Corporation, which was made public last Tuesday evening, after the directors of that organization had declared the regular quarterly dividends of 1¾ per cent. on the preferred and of 1 per cent. on the common shares. As was expected, the net earnings for the three months were the largest for any corresponding period since the company was formed. They amounted to $43,804,285, compared with $38,114,624 in the September quarter last year. While the figures fell short of the record for the June quarter of this year, in which the net mounted up to $45,503,705, they nevertheless make a very good showing, and bring the total for the nine months which they complete up to nearly $128,500,000, as compared with a little less than $120,000,000 for the corresponding period in 1906. The earnings for the quarter and for the nine months ending September 30, compared with the results of the previous year, as well as the net earnings by months for three years, are given in the following tabulated form:

Quarter ending Sept. 30	1907	1906
Net	$43,804,285	$38,114,624
Sinking funds subsidiary companies	589,358	578,053
Depreciation and reserve	6,519,822	6,055,859
Total	7,109,180	6,633,912
Balance	36,695,105	31,480,712
Interest on bonds	5,633,122	5,691,521
Sinking fund U. S. bonds	1,303,840	1,245,442
Total	6,936,962	6,936,963
Available for dividends	29,758,143	24,543,749
Dividend, preferred	6,304,919	6,304,919
Available for common	23,453,224	18,238,830
Dividend, common	2,541,513	2,541,512
Surplus	20,911,711	15,697,318
Special funds	1,000,000	1,000,000
Special appropriations	15,000,000	11,000,000
Total special deductions	16,000,000	12,000,000
Final surplus	4 911,711	3,697,318
Nine months ending Sept. 30	1907	1906
Net earnings	$128,430,482	$119,984,621
All int. s. f. and reg. dep. and res.	38,797,819	39,733,870
Available for dividends	89,632,663	80,250,751
Dividend, preferred	18,914,757	18,914,757
Available for common	70,717,906	61,335,991
Dividend, common	7,624,539	2,541,512
Surplus	63,093,367	58,794,482
Special funds, etc	51,000,000	44,000,000
Final surplus	12,093,367	14,794,482
Previous surplus adj	97,720,714	88,435,769
Total surplus	109,814,081	103,230,251

NET EARNINGS BY QUARTERS.

	1907	1906	1905
January	$12,838,703	$11,856,375	$6,810,847
February	12,145,815	10,958,275	6,629,463
March	14,137,974	13,819,840	9,585,586
First quarter	39,122,492	36,634,490	23,025,896
April	14,600,838	12,581,902	9,037,925
May	16,056,832	14,041,601	10,602,187
June	14,846,035	13,501,530	10,665,004
Second quarter	45,503,705	40,125,033	30,305,116
July	13,804,167	12,242,098	9,035,168
August	15,279,173	13,158,860	10,986,901
September	14,720,945	12,713,665	11,218,513
Third quarter	43,804,285	38,114,624	31,240,582

The above showings for the quarter and the nine months were naturally regarded as quite satisfactory. It was furthermore noted that after providing for the preferred dividend the amount earned in the quarter on the common stock was equal to about 4.6 per cent., against 5 per cent. in the June quarter; while taking the results for nine months into consideration, the amount applicable to dividends on the common was equivalent to nearly 14 per cent. upon the total of $508,000,000 of the outstanding shares of that class. The management, moreover, has kept up its policy of making large appropriations for improvements, etc., which for the quarter amounted to $16,000,000, compared with $12,000,000 in the same quarter last year.

The most interesting feature of the showing from the standpoint of investors and the stock market was the amount of orders which had been booked and were on hand on September 30. These amounted to 6,425,008 tons, comparing with 7,603,000 tons at the end of the June quarter, 8,043,000 tons on March 31, and 8,489,000 tons on December 31, 1906, which was the high record. The following table gives the unfilled orders in tons at the close of each quarter and the net earnings quarterly since June 30, 1902:

	Unfilled orders, tons	*Net earnings*
September 30, 1907	6,425,008	$43,804,285
June 30, 1907	7,623,878	45,503,705
March 31, 1907	8,043,858	39,122,492
December 31, 1906	8,489,718	41,750,125
September 30, 1906	7,030,884	38,114,624
June 30, 1906	6,809,589	40,125,032
March 31, 1906	7,018,712	36,634,400
December 31, 1905	7,088,886	35,216,063
September 30, 1905	5,808,377	31,240,582

In addressing the directors ex-Judge Gary, the chairman of the corporation, stated that while there was a recession in business during the past three months, it was believed that the demand for the products of the corporation would be fully maintained, as stocks on hand were low, and that the curtailment in the demand was, on the whole, the result of the inability of those desiring to purchase them to secure adequate funds. These conditions, it was urged, would rapidly improve, especially if the unwarranted excitement which has recently been witnessed should disappear. At the same time it was admitted that bookings during the month of October had fallen off, and that they were at the time of the meeting at the rate of about 18,000 tons per day, against 20,000 tons in September. The company, however, anticipating the diminution of its orders, had made preparations accordingly, and it was not holding large stocks of pig iron and other raw material.

THE ENGLISH COTTON INDUSTRY.

Manchester, October 19.—Manufacturers are not doing well at all so far as profits are concerned, but spinners have a wide margin between the raw material and the finished yarn. Up to the present the increase in the new spindles working has not been sufficient to balance the fresh looms put down during the last two or three years. The excellent demand for yarn from abroad has also strengthened the position of spinners. Speaking generally, our markets abroad are healthy and the consumption of cotton piece goods continues on a fairly free scale. The price of American cotton has eased off considerably during the past month, but yarn quotations have not been reduced to a corresponding extent. Buyers of piece goods in our foreign markets have expected greater concessions in prices than are obtainable. Manufacturers who use bought yarn are handicapped by the stiff rates which have to be paid for twist and weft. The output of the current American crop is very uncertain, and until something more definite is known, shippers are not likely to purchase freely for distant months.

Our shipments of cloth continue on a large scale. The decrease in the month of September, as compared with last year, was accounted for by reduced shipments to Egypt and Turkey. This is owing to the financial unrest in those markets. Following is a comparative table for the month of September and nine months ended September 30 for three years:

	September, yards	*Nine mos., yards*
1907	473,710,500	4,782,546,700
1906	484,380,600	4,748,715,100
1905	526,916,800	4,603,146,100

Bombay is taking much more freely than in 1906, and Canada and Brazil are much better customers than last year. We are not exporting anything like so freely to China as twelve months ago, and the business arranged during the past month has not been very important. Some exceptional sales have transpired for China, which have provided makers with work to go on with for some time. Indian buying has not been on a free scale, but in both fine goods and shirtings a moderate turnover has been made. South American markets have displayed a little more activity. In home trade, cloth buying has been deferred owing to retailers expecting lower prices later on in the year. The general outlook for our home trade is healthy, employment being good in most industries throughout the north of England.

The feature of our shipments of yarn is the increased takings of several continental countries. The following is a comparative table for the month of September and nine months ended September 30 for three years:

	September, pounds	*Nine mos., pounds*
1907	20,057,700	177,734,900
1906	16,057,400	156,298,800
1905	16,039,400	148,153,600

Germany is taking on a much larger scale than last year, the increase so far being over 19,000,000 pounds. The Netherlands and Russia are importing more freely than last year. Japan is not doing so well, and there is a falling off from Turkey. There has continued throughout the month a healthy demand from the continent for fine numbers. Offers from our eastern markets have not been of a practicable character, but single yarns such as 40s mule are deeply sold, and long delivery has to be given. Producers of yarns suitable for home consumption have met with a steady business, and engagements are quite as extensive as four weeks ago. Twists are rather stronger than wefts, but the finer numbers in the latter descriptions are fairly well sold. Coarse counts are not doing so well, the demand being rather poor and the margin somewhat unremunerative.

The question of increased payment for producing fine numbers in the Oldham district has been pushed forward by the operative spinners. Owing to the absence in the States, however, at the Atlanta Cotton Conference, of many of the masters, the workpeople are deferring further action for the moment. The operatives' officials seem determined to press their case, and in about a month's time it seems likely that the matter will require great care if trouble is not to be experienced.

Considerable interest is being taken here in the conference at Atlanta. It is hoped by users on this side that something will be done to improve the handling and baling of the raw material. T.

EDITORIAL NOTES.

During the past ten days a change of a very marked character has taken place in the copper market. Not only have the prices for the metal advanced from a little over 11 cents per pound to 15 cents, but there has been a renewal of heavy buying. The extent of the purchases, it is stated, runs up to millions of pounds. In fact, it is asserted that one of the largest concerns, which acts as selling agent for mines and smelters, has disposed of practically its entire accumulation, while it is furthermore intimated that the United Metals Selling Company has reduced a large stock which it had on hand to small proportions. A great deal of this buying is unquestionably for foreign account, and heavy shipments of copper from America to Europe are under way. In fact, this renewed foreign demand for copper is the most advantageous feature yet revealed, in view of the present financial perplexities, adding, as it will, largely to the ability of this country to draw gold from Europe. On the whole, the action of the copper market has been widely cited as a most favorable incident in a situation fraught with difficulty to American business and financial interests, and has served as a basis for renewed strength in the stocks of the Amalgamated Copper Company and similar organizations in the stock market. On the other hand, it may be observed that this buying of copper, while to a certain extent representing renewed demands for consumption, is believed to be largely of a speculative nature. Manufacturers of all classes who employ copper in their industries do not meet with any improvement in the orders for finished products, and till this makes its appearance, the renewed purchasing of copper seems to proceed mainly from the idea in various quarters—perhaps a correct one—that it is cheap at present figures.

Clearing House certificates were first issued by the New York banks in 1860, in the emergency created by the approach of the civil war, and have been issued in years of stress since then as follows:

	Aggregate authorized	*Maximum issued*	*Int. pd. per ct.*
1860	$7,375,000	$6,860,000	7
1861	22,585,000	21,960,000	6
1863	11,471,000	9,608,000	6
1864	17,728,000	16,418,000	6
1873	26,565,000	22,410,000	7
1884	24,915,000	21,881,000	6
1890	16,645,000	15,205,000	6
1893	41,490,000	38,280,000	6

In 1893, in addition to the amount issued by New York, Boston, Philadelphia, Baltimore, New Orleans, Buffalo, Pittsburgh, Detroit and Atlanta issued in all about $27,000,000. This year the New York certificates will be in denominations of $5,000, $10,000 and $20,000. Following is about the form used: "This certifies that the (name of bank) has deposited with this committee securities in accordance with the proceedings of a meeting of the association, upon which this certificate is issued. This certificate will be received in payment of balances for the sum of $5,000 from any member of the Clearing House Association. On the surrender of this certificate by depositing bank above named the committee will indorse the amount as a payment on the obligations of said bank held by them and surrender a proportionate share of the collateral securities held thereunder."

Inclusion of the trust companies of Greater New York in the Clearing House organization has now become a practical question. It is understood, in fact, that plans to that end have been under discussion between the Clearing House committee and the committee representing the trust companies, which was constituted last week, when the troubles regarding some institutions of the latter class developed. Of the desirability of such a step there can be no doubt. Inasmuch as the deposits in the trust companies are in the aggregate about equal to those in the banks, it is an anomaly that these institutions should be outside of the Clearing House, and that their position, which is not infrequently a determining factor in money market conditions at the metropolis, should not be represented in the weekly bank statement. Furthermore, since the trust companies as a class have adopted the policy of doing a general banking business, it is manifestly desirable from the standpoint of public interest that they should be subject to very much the same supervision which the Clearing House Association exercises over the banks, which constitute its membership, the events of the past fortnight having given added force to this argument. It seems, however, that the working out of the matter involves difficulties which, while they may be surmounted, require careful consideration. It will be recalled that when the trust companies, a few years ago, with the exception of a few of their number, abandoned the privilege which they had theretofore enjoyed of clearing through members of the association, their course was determined by the action of the Clearing House in making a requirement that the trust companies should keep a 15 per cent. cash reserve against their deposits, while another potent factor in determining their course was that the trust companies, under the existing system, were subjected to rules in the making of which they had no voice whatever. These same obstacles have, it would appear, made their appearance in the present instance, the question of adequate reserves being again raised by the banks, and, as before, the very pertinent circumstance is brought out by the trust companies that a large portion of the deposits in some of the largest and strongest of these institutions are not subject to check, but are held either for a specified time or under the restrictions of trust agreements. It would seem, however, that with the severe lesson which the banking community at New York and other cities has just received, there will be a continued and earnest effort to bring this very praiseworthy endeavor to a successful consummation.

At a meeting of the Union Pacific directors on last Wednesday a committee was appointed to take into consideration a plan whereby that corporation's large holdings of stocks of various other companies may be distributed among its shareholders. This action had been reported as being under consideration for some time past, and it was generally understood that Mr. Harriman and his associates, who are in control of the company's policy, had reached the sage conclusion that it would be well to bow to public opinion and remove from the Union Pacific Company the stigma of being a holding concern as much as operative railroad. Whether recent events in connection with the stock market, particularly the sharp shrinkage in value of the Union Pacific's holdings of other companies' stocks, hastened the decision is only a matter of surmise, though it may be presumed to have had some effect upon the decision. It would also appear that there is some doubt about how far reaching the plan of distribution will be. It is, for instance, urged that it is clearly advantageous and far from illegal for the Union Pacific to retain a large if not a controlling interest in the Southern Pacific, the Baltimore & Ohio and the Illinois Central roads, and that the stock which it owns in those concerns need not be included in the distributive scheme. This and other questions, however, will doubtless receive careful consideration, but it further seems highly probable that it will be some time before the details of the matter can be settled. In fact, there are some interesting questions involved as to the extent to which the Union Pacific preferred stockholders should be allowed to participate, and whether the owners of the convertible bonds, which were recently put out by the company, are to be given a share in the distribution.

Discussion of proposals of change in the postal system appears to be insistent. Postmaster-General Meyer has returned to the subject more than once recently, his latest statement regarding contemplated changes having been made at a dinner in Philadelphia on Saturday last. In his address on that occasion he dealt at length with the question of the parcel post, saying that what he aimed at was to abolish an injustice, and that he would recommend the same rate and the same limit of weight for parcels, whether intended for points in this country or abroad. It is not believed that the parcel post system will be pressed by the special congressional committee which has been inquiring into postal business and methods, but it is understood that that body will recommend the creation of a director of posts who will be a purely business official, not subject to displacement with every change of administration—an arrangement in favor of which some strong arguments may be adduced.

The final report of operations of British railways in 1906 confirm earlier published advices as to that year being a prosperous period in British transportation lines. There, as in this country, the increased cost of operation is reflected in a smaller relative gain in net as compared with gross earnings, but the margin was not greatly reduced. Following are the figures of earnings, gross and net, for 1906 and 1905, compared:

[Three figures omitted in £.]

	1906 *Miles*	1905 *Miles*	*Inc. in Amt. Miles*	1906 *Per cent.*
Mileage	23,063	22,847	216	0.9
Track mileage (including sidings)	52,904	52,322	582	1.1
Capital	£1,286,883	£1,272,601	£14,282	1.1
Ordinary capital	486,720	480,996	5,724	1.2
Receipts				
Passenger traffic	£49,883	£48,720	£1,163	2.4
Goods traffic	58,304	56,412	1,982	3.5
Miscellaneous	8,951	8,399	552	6.6
Total	117,228	113,531	3,697	3.3
Working expenditure	72,782	70,065	2,717	3.9
Net earnings	44,446	43,466	980	2.3
Proportion of net earnings to capital	*Per cent.* 3.45	*Per cent.* 3.42	0.03	0.9
Dividend paid on ordinary capital	3.35	3.29	0.06	1.8

There is here shown a gain of 3.3 per cent. in gross receipts, of 3.9 per cent. in operation expenses and of 2.3 per cent. in net earnings. As regards the gains in different classes of traffic, the interesting explanation is made that the increase in passenger traffic is largely due to increased traffic in London, owing to the opening of new lines of "underground" railway. The increased tonnage in freight was largely explained by enlarged shipments of coal, and it is worth noting that the chief item of increase in operating expenses was in the cost of this fuel.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Municipality—Electric Wires—Obstruction

The Supreme Court of Illinois held, in the case of Palestine vs. Siler, that the fact that a municipal corporation operated an electric-light plant in a public capacity was no answer to a claim of liability on its part for permitting uninsulated wires to obstruct its public streets.

Debt—Payment—Chattels—Purchaser.

The Supreme Court of Alabama held, in the case of Pelham vs. Chattahoochee Grocery Company, that one taking chattels in payment of a pre-existing debt is a purchaser within the rule that chattels cannot be recovered from a bona fide subvendee because of the fraud of the first purchaser.

Wharf Owner's Liability—Collapse.

The Supreme Court of Louisiana held, in the case of Christadore et al. vs. Heirs of Von Behren, that the owner of a wharf which collapsed while being put to the use for which it was intended was responsible in damages to those who were on it legitimately at the time and were injured, and that it made no difference that a person so injured was on the wharf as a guest or visitor of the lessee of the wharf. The court overruled an earlier case in so far as it held that the responsibility provided in such cases by act 2433 of the Civil Code was restricted to neighbors and passengers.

Real Estate—Broker—Commission.

Where the owner of real property agreed to allow a broker as a commission for effecting a sale thereof all he could obtain from the property above a fixed amount, the Supreme Court of Minnesota held (Holcomb et al. vs. Stafford) that to entitle the broker to a commission in such case he must produce a purchaser ready, willing and able to purchase the property for a price exceeding the amount fixed by the owner, and that he was not entitled to the reasonable value of his services where the purchaser produced by him is willing to pay no more than the price so fixed by the owner, though the property be sold to him.

Insolvent Corporation—Creditors—Claims.

The Supreme Court of Louisiana held, in the case of Wenar vs. Schwartz, that no principle of law stands in the way of two or more creditors of an insolvent corporation clubbing their interests for buying up the other creditors at a reduced figure or of their doing so through an interposed person, and having such person thereafter champion the claims in court as if the owner of them in the course of the judicial settlement of the affairs of the corporation. The court said that what one may do oneself, one may do through an agent, and that there is nothing fraudulent or illegal in buying up claims against an insolvent corporation and afterwards championing them in court.

Accident—Defective Installation—Lamp.

The New York Court of Appeals held, in the case of Fish vs. The Waverly Electric Light & Power Company, that an electric light company which by employing an unskilled man to hang a heavy arc lamp in a store, left it so insecurely attached to the ceiling that it fell and injured a clerk employed by the store company, was liable to him for the injury, the store company having assumed no responsibility in the installation of the lamp, which was to remain the property of the electric light company and under its care and management. The court further held that it was competent for an experienced carpenter to testify that hooks if properly placed in a ceiling should pass through a joist, and that the exclusion of a question intended to show that fact was error.

Employer's Liability—Volunteer Services.

Where a person was employed by a railroad company as a car inspector and repairer, and in this employment the relation of master and servant existed between them with all its attending duties and obligations, the Kentucky Court of Appeals held (Louisville & Nashville Railroad Company vs. Pendleton's Adm'r) that the relation did not continue when, without authority or direction, the employee undertook the performance of other duties entirely disconnected with those for which he was engaged, and that in performing these duties he occupied toward the employer the same relation as if he were an entire stranger. This was a case in which the car inspector volunteered to assist the switching crew in a railroad yard, with a view to his own advancement in becoming proficient as a brakeman and switchman, and while passing an empty car which had been negligently left standing nearby on an adjoining track was knocked off and killed. The court held that the employee could not by his action create the relation of master and servant, and that the mere knowledge of the agent in charge of the business who saw him thus employed did not have the effect of creating by implication of law the relation of master and servant, or convert him from a volunteer into a servant.

Statute of Frauds—Sale—Agreement.

The Supreme Court of Wisconsin held, in the case of J. H. Silkman Lumber Company vs. Hunholz, that where the subject of a verbal agreement for the sale of personal property was in the possession of the contemplated vendee as bailee, or to some extent by reason of its being on his premises by his permission, the mere agreement consisting of an offer to sell on specified terms and acceptance thereof did not work a change of possession so as to satisfy the statute of frauds, as for that end there must be some affirmative act on the part of the purchaser manifesting an intention to accept the property under the sale agreement in order to make transition of title from seller to purchaser.

Employment—Contract—Personal Services

The Supreme Court of Minnesota held, in the case of Beissel vs. Vermillion Farmers' Elevator Company, that in a contract of employment where the services to be rendered are personal, involving considerations of fitness, integrity and confidence, and the contract provides that if the employee neglects or refuses to perform the services in a manner satisfactory to the employer, then the employer at his option may declare the agreement null and void, all that is required on the part of the employer is that he shall act in good faith and not arbitrarily. The court further held that where the employee is wrongfully discharged prior to the termination of his contract of employment, he is not required, in an action to recover the stipulated wages for the entire term covered by the contract, to allege and prove that in the interim he was unable to obtain other employment.

Taxation—Corporation—Listing Property.

The Kentucky Court of Appeals held, in the case of Commonwealth vs. Steele et al., that under section 4085 of the Kentucky Statutes, providing for the listing of the property of corporations for taxation, the property of all corporations, including its stock, should be listed for taxation by the corporation and not by the owner of the stock, the stockholder becoming liable only in the event that the corporation fails to pay its taxes; that in a proceeding where it is sought to list corporate stock for taxation in the hands of the stockholder, it should affirmatively appear from the record that the commonwealth has first proceeded against the corporation; that in the absence of such showing the court will presume that the corporation did its duty by listing its property as required by law, and that in listing corporate stock for taxation it should be listed at its fair market value as well as its premium value if it be selling above par.

Hotel Keeper's Lien—Property.

The New York Court of Appeals held, in the case of Horace Waters & Co. vs. Gerard, that the provision of section 71 of the Lien law of 1899, to the effect that a keeper of a hotel has a lien upon while in possession and may detain the baggage and other property brought upon the premises by a guest for the proper charge due from him on account of his accommodation, was with respect to its giving a lien on property brought to the hotel by a guest, but which, unknown to the proprietor, belonged to another person, a constitutional exercise of legislative power. The court said, among other things: "The reason for the general lien is as applicable against the property of third persons in the possession of the guest as against the property of the guest himself. Because the innkeeper was compelled to receive the traveler and accept the extraordinary liability which extends not only to the luggage and personal property owned by the traveler, but to the luggage and personal property in his possession, although owned by another, it was necessary to give to the innkeeper a compensatory lien for his charges to make the maintenance of inns desirable. The extraordinary liability and the lien are concurrent and go hand in hand, and together make up the rule founded on public policy."

BUSINESS NOTES.

Transactions on New York Stock Exchange.

Transactions in stocks on the New York Stock Exchange for the month of October aggregated 17,310,181 shares, an increase of 42 per cent., or of 5,167,942 shares as compared with the previous month, but a decrease of 4,491,964 shares, or 20 per cent. as compared with the corresponding month in 1906.

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	63,958,500
April	19,220,048	43,254,400
May	15,755,363	33,059,500
June	9,734,359	21,666,500
July	12,797,738	25,348,700
August	14,502,813	30,152,500
September	12,142,239	36,415,500
October	17,310,181	62,697,500
Total	173,211,420	392,660,600

Comparisons in stock dealings back to 1901 follow:

	October	*Ten months*
1907	17,310,181	173,211,420
1906	21,802,145	244,037,281
1905	17,742,434	204,747,926
1904	32,479,568	126,393,005
1903	12,671,051	134,827,409
1902	16,348,369	155,484,126
1901	14,023,147	230,544,552

Dealings in bonds during October were the heaviest in any month since April, 1906. Bond dealings back to 1900 follow:

	October	*Ten months*
1907	$62,697,500	$392,660,600
1906	56,990,900	590,154,700
1905	74,015,720	867,181,920
1904	149,073,500	701,804,060
1903	73,584,900	569,780,950
1902	68,653,000	776,151,850
1901	64,954,600	832,932,120
1900	42,297,600	394,776,460

The Tinplate Situation.

"There has been a remarkable slowing down in tinplate production since last June, compared with the movement a year ago. The leading interest is operating considerably less than 100 tin mills, or less than 40 per cent. of its capacity, having been closing mills steadily since July 1," says the *Iron Trade Review*. "During the first half of the year it operated from 220 to 235 mills, but began with that month a policy of closing its mills in rotation for repairs. Contrary to expectations, however, the mills as repaired have not as a rule been put into operation again. Last year the course was totally different. Mills were closed for but the briefest periods in July, and in the remaining five months of the year practically the full quota, or from 220 to 232 mills, was steadily operated. In 1904 and 1905 there was a slowing down in tinplate production comparable to the present, but not nearly so severe. It is idle to attempt seriously to discuss cause and effect in the pig-tin market. Pig tin has reached the lowest price since July, 1905, but no one can, or, if anyone can, he will not, say whether the decline is due to a decreased consumption in tinplate making, or whether the decrease in tinplate production has been due to the decline in pig tin. Certain it is that the decline in pig tin has led tinplate buyers to expect lower tinplate prices, and it is reasonably certain that the present decrease in production is well calculated to forestall a decline either for this year or for the spring season. Should tinplate production not increase during the next two months, the mills would reach the first of the year without their customary stocks, and a strong tinplate market would naturally result."

Output of Petroleum.

The production of petroleum in the United States in 1906 was 126,493,936 barrels, having a total value of $92,444,735. This compares with 134,717,580 barrels, valued at $84,157,399, in 1905, and 117,086,960 barrels, valued at $101,175,455, in 1904. Last year's output was furnished by the five great fields, as follows: Appalachian field, 27,741,472 barrels; Lima-Indiana-Illinois field, 21,951,711 barrels; mid-continent field, 21,718,648 barrels; gulf field, 21,645,425 barrels; California field, 33,098,598 barrels, and from scattered states and areas, chiefly Colorado and Wyoming, 338,082 barrels. As to the rank of the various states in the production of petroleum, California furnished nearly one-fourth of the total output and still holds first place as to quantity, and Kansas, Indian Territory and Oklahoma, jointly, hold second place. If the production of these states were separated, however, it is probable that Indian Territory would fall into seventh place, while the other two would be much farther down in the list. Ohio occupies third place, and is followed by Texas, Pennsylvania, West Virginia, Louisiana, Indiana, Illinois, New York, Kentucky, Tennessee, Colorado, Wyoming, Michigan and Missouri, in the order named. In value of oil produced Ohio stands first, with Pennsylvania and West Virginia second and third. Kansas, Indian Territory and Oklahoma, jointly, have fourth place, and California fifth. The order of the other producing states in value of output is: Indiana, Texas, Louisiana, Illinois, New York, Kentucky, Tennessee, Colorado, Wyoming, Michigan and Missouri. The greater part of the oil from the California and gulf fields is consumed as fuel, but only a small proportion of that produced in other fields is so utilized. Any of the oils can be made to produce more or less of a commercial product.

India's First Steel Plant.

Consul-General W. H. Michael, of Calcutta, advises that the first attempt to establish iron and steel works in India has just been started by a rich firm in Bombay, supported by other wealthy individuals, and by the government of India, the details being as follows: It starts out under what seems to be the most auspicious circumstances, and the proposed enterprise is receiving hearty acclaim from all over India. The location of the plant will be near Sini Junction, on the Bengal Nagpur Railway, where there is abundance of water, and where iron ore, coal and limestone can be assembled at low cost of transit. The government of India has authorized the construction of a broad-gauge line from the proposed site and ore beds, a distance of sixty miles. On all government railways the cost of transportation in the interest of the plant will be put down to a mere nominal figure for a term of years, say, .15 of an anna (1 anna equals 2 cents) per ton per mile. The government agrees to take at import prices 20,000 tons of steel rails annually for ten years—in fact, agrees to do whatever is within its power to encourage the enterprise within proper business limits. The output of the works will be about 200,000 tons, and the royalties to the government for the first thirty years will be 1¾ cents per ton, and for the second thirty years 10 cents per ton.

Railways—Area and Population.

Two chief considerations determine the construction of railways in a given country or state—area and population, present or prospective; in other words, room for building and people to furnish traffic. Compared with European countries the United States and most of the states have a much greater proportionate area to a given mileage of railways—much more room for railways; but, on the other hand, our builders have been far more liberal in providing transportation in proportion to the number of people served than any of the old world countries. To build a short railway in a densely populated region does not indicate great foresight or courage, but to push long lines into thinly peopled territory and even beyond the confines of civilization, over arid plains and through mountain wilds, and then to set about the slow labor of finding and bringing in the people to use the railway, is to do a brave work, which ought to command gratitude as well as admiration from its beneficiaries. For this line of reflection the following specimen figures, showing miles of line per 100 square miles, and miles of line per 10,000 inhabitants, are worthy of study:

Countries	*Square miles*	*Inhabitants*
Belgium	39.6	6.5
Great Britain and Ireland	18.7	5.5
Switzerland	16 7	8.0
Germany	16.7	6.2
Netherlands and Luxemburg	15.0	3.5
France	14.0	7.4
Denmark	13.7	8.3
Sweden	4.5	15.3
All Europe	4.8	4.8
United States	7.3	27.8
Mexico	1.6	8.4
Canada	0.6	38.6
Massachusetts	26.3	6.96
Texas	4.6	36.4
Washington	5.0	60.2
Montana	2.2	125.2
Nevada	1.0	255.5

Compared with Belgium, for example, the United States affords room for five and one-half times our present railway mileage, or, say, 1,200,000 miles; but with respect to number of people served our railway builders have provided over four times as many miles of road as those of Belgium; in other words, on the Belgium basis, instead of having 224,000 miles of railway we should have only 53,000. Populous Mexico, with far smaller railway mileage compared with area than most of the European countries, does not yet show much greater mileage compared with the number of inhabitants than those countries; but Canada, with prodigious area, already has provided many times as much railway per man as the old countries.

CURRENT BUSINESS NEWS.

Commercial.

Consul-General Julius G. Lay, writing from Cape Town, reports that the export of Cape Colony diamonds during 1906 amounted to $33,247,076, a large increase as compared with 1905, the greater part of which, both cut and uncut, went to the United States through European ports. In addition, the export of Transvaal diamonds through Cape Colony last year amounted to $7,729,301; Orange river diamonds, $4,046,928, and Rhodesia diamonds, $28,469. It is reported that the De Beers Company, at Kimberley, has discharged 500 men, in order to reduce its output until the surplus stock of stones on hand is disposed of and to maintain the price of diamonds. There is a movement now on foot to levy a 10 per cent. export tax on uncut diamonds, its advocates contending that such a tax would bring many of the lapidaries in Holland to South Africa, and millions of pounds in wages to be spent in that country.

The Springfield (Mass.) *Republican* reports that the scarcity of fish with which to supply the sardine canning factories of Eastport, Lubec and other canning centers will probably cause an early closing of the packing season. The fish seem to have deserted the waters of Passamaquoddy bay, which they usually frequent in large numbers at this season. The fishermen from New Brunswick and other provinces report the catch as unusually light and uncertain. The fish have appeared in extensive schools at various places along the coast, only to disappear as soon as the fishermen get active with their outfits.

The Mexican government has authorized a denial of the report that it contemplated temporarily removing the duties on corn and wheat in order that importation of those products might be made from the United States. The crops of the country are said to be sufficient to supply the home demand.

The govenment ginning report as of October 18 shows, with comparison for previous years, the amount of cotton ginned by states as follows:

	1907	1906	1905	1904
Arkansas	162,208	159,998	123,952	245,527
Georgia	878,315	725,930	1,040,546	1,013,355
Indian Territory	120,489	103,038	86,638	178,270
Louisiana	183,104	317,084	135,176	385,767
Mississippi	398,381	364,857	327,776	569,456
North Carolina	215,112	223,327	317,381	289,995
Oklahoma	120,299	89,329	96,979	102,901
South Carolina	536,242	396,225	623,130	607,686
Tennessee	54,970	38,848	69,524	81,776
Texas	1,202,029	1,083,033	1,495,206	2,205,186
United States	4,407,055	4,016,490	5,012,011	6,420,994

Total ginneries reporting, 3,188.

This table gives the total commerce of the United States with Germany in the months of July, August and September, 1903 to 1907:

	Imports from Germany	*Exports to Germany*
1903	$30,096,789	$33,016,639
1904	32,322,827	35,174,125
1905	34,207,897	49,528,211
1906	38,278,453	46,028,390
1907	43,844,495	50,307,064

Foreign crop conditions as published Tuesday by Broomhall: United Kingdom — Outlook is more favorable as a result of improved weather. France—Weather has improved, and as a result the advance in prices has been checked. Germany—Area already seeded is in need of rain. Supplies are moderate. Belgium, Holland, Italy, Spain and North Africa—Weather is favorable for seeding. Roumania—A fair acreage has been seeded in dry soil, and the outlook is very unfavorable. Supplies are fair, but are said to be exhausted at interior points. Hungary, Bulgaria and Turkey—Soil is very dry and seeding prospects are bad. Russia—In the southern, western and northwestern regions drought continues, with some frost reported. Prospects for the winter-wheat crop of 1908 are less favorable. In the northeast and center the outlook is favorable. Arrivals of grain at the southwest are very light and in the southeast moderate. Argentine—Hailstorms are reported and also a continuance of too much rain. Australia—Drought continues, with no improvement reported. India—Drought still continues. The recent rain reported fell a thousand miles from the wheat region.

It is announced that at the expiration of the present year transatlantic steamship lines trading to Boston and other north Atlantic ports will make a slight advance in freight rates on all classes of goods.

Over 7,000 tons of naphtha, according to the manifest, have been imported from Singapore by the Standard Oil Company. It is stated that the oil is for consumption, and it is therefore thought that the cargo consists of gasoline and is intended to supply the extraordinarily heavy demand for petroleum products for gas engine use that has prevailed throughout the spring, summer and fall. It was not generally known that any shortage existed in the domestic supply, and, while the statement is not definitely made by the Standard that such is the case, this importation would seem to indicate that our own production, allowing for a heavy export demand, has not been equal to the tax.

Broomhall has made some revised estimates of wheat requirements. He calls present season's requirements 3,040,000,000 bushels, and makes the world's crop 2,840,000,000 bushels, against 3,056,000,000, the average of three past years, but says there are 200,000,000 in reserves from previous crops, an increase of fifty millions past three years. He makes our crop 600,000,000 bushels. Argentine, Australian and Indian crops yet to be gathered.

The annual convention of the National Tobacco Growers' Association was held in Shelbyville, Ky., Wednesday. All the tobacco-raising states from Wisconsin to the Carolinas are included in the organization. The growers are assured by their leaders that if no crop is grown in 1908 they will receive as much for the two unsold crops of 1906 and 1907 as they would for three crops, should they grow one next year. The decision of the executive committee of the Burley Growers' Association at Winchester, Tuesday, not to grow a crop in 1908 will have great influence with the American society. The Burley Association is a part of the National.

A consular report indicates that there is a good market in China for cheap American wall paper. This report suggests the establishment of agencies with complete supplies at the principal Chinese ports. Modern sanitation has been recently introduced at Tsingtau, and buildings, both old and new, are being fitted with the latest bath-room furnishings. Germany and England get most of the business.

Following are figures compiled by the *Journal of Commerce and Commercial Bulletin* of companies incorporated in the eastern states during October with an authorized capital of $1,000,000 or more:

	1907	1906	1905
January	$267,340,000	$411,945,000	$116,250,000
February	210,700,000	202,650,000	98,600,000
March	195,050,000	105,374,000	192,645,000
April	134,250,000	232,080,000	180,111,111
May	122,250,000	135,300,000	249,270,000
June	165,450,000	242,240,000	232,150,000
July	85,300,000	69,200,000	61,315,000
August	64,250,000	109,150,000	86,125,000
September	76,000,000	167,750,000	167,400,000
October	79,100,000	138,350,000	120,950,000
Total, 10 months	1,399,690,000	1,814,039,000	1,504,796,111

The *American Agriculturist* estimates the potato crop of 1907 at 268,000,000 bushels, as compared with 283,000,000 bushels in 1906. The crop is somewhat larger than in 1905, and slightly smaller than three years ago. Reasonably good prices are realized at the harvest field, and many farmers are selling under the stimulus of an advance from opening figures, while others are holding for still better prices.

The State Department was advised Thursday in a dispatch from Ambassador White, at Paris, that he had been informed by the French government that the imposition of the maximum duty on the importation of Porto Rican coffee had been postponed until December 1.

The value of iron and steel, excluding ore, exported in September was $16,830,833, as compared with $13,400,682 in September, 1906. In nine months ended September the exports were valued at $146,231,080, as against $126,598,883 for a similar period of 1906 and $102,922,277 in 1905. The imports of iron and steel goods in September were valued at $2,902,301, as compared with $2,832,199 in September of 1906. In the nine months ended September imports were valued at $31,698,070, as against $24,376,887 in the similar period of 1906 and $19,565,755 in 1905.

Financial.

The increase of banking facilities in Mexico is shown by the report of the Banco Nacional of Mexico, which now has over fifty branches scattered through the country. These banks serve all financial purposes, and through them passes a large part of the business which the United States transacts with Mexico. The head office at Mexico City is an old and strong institution, with a capital of $32,000,000 Mexican. In New York, Messrs. Maitland, Coppell & Co. issue drafts and make cable transfers through this bank and its agencies on all points in Mexico.

Owing to increased business on the Chicago Stock Exchange, the governing committee has decided to reopen its Clearing House, which has not been in use for two years. Beginning Monday, trades were cleared through the department, as was the old custom.

Press dispatches say that the Bath (Maine) Trust Company, a small bank, closed its doors Monday as the result of withdrawal of deposits. The president stated that the suspension of business was due to lack of currency. The capital is $100,000 and amount of deposits $500,000.

The Imperial Bank of Germany on Tuesday advanced its official discount rate from 5½ to 6½ per cent. The 5½ per cent. had been in effect since April 23 last, when it was lowered from 6 per cent. That rate was fixed on January 22, replacing the 7 per cent. minimum established on December 18 last year. Excepting that rate, and the 7 per cent. level fixed at the outbreak of the Boer war, in 1899, the present rate is the highest in the history of the Reichsbank. The official rate at this date in recent years has been as follows:

	Per cent.		*Per cent.*
1907	6½	1901	4
1906	6	1900	5
1905	5	1899	6
1904	5	1898	5
1903	4	1897	5
1902	4	1896	5

According to the *Mining World*, "the question in Mexico of what a 'dollar' means has recently been authoritatively settled. The Department of Finance has decided that the word 'dollar' shall mean the American gold dollar, and that when the Mexican silver dollar is meant the word 'peso' shall be employed. Some time ago an American resident at Tampico wrote 'dollars' on a check, and the Tampico bank cashier to whom the check was presented paid the amount in gold values. The drawer of the check claimed that it was his intention to have silver paid. Litigation was threatened, but upon investigation the authorities decided against the drawer of the check. The Mexican ruling applies to all documents—notes, drafts, etc."

The stockholders of the New York, New Haven & Hartford Railroad at their annual meeting Wednesday reëlected the old board of directors and voted to increase the capital stock of the road by 43,219 shares, to be issued for improvements. It was said that the price at which the new stock would be issued was left to be fixed by the directors, but that it would probably be about $125 a share.

The First National Bank of Chicago has arranged to import $2,000,000 in gold from Europe. The coin will go direct to Chicago. The Second National Bank of Boston followed the example of the Chicago bank by engaging $400,000. A Philadelphia institution was said to have taken $500,000. Ordinarily such transactions are conducted through New York.

The *Journal of Commerce* estimates the dividend and interest payments for November at $75,103,801, a new high record for the month, as against $53,000,000 last year.

The rate of discount of the Bank of England was raised Thursday from 4½ to 5½ per cent.

The National Bank of Belgium on Thursday raised its discount rate to 5½ per cent.

Bank clearings at New York in October aggregated $8,196,003,441, compared with $6,030,228,747 in September and $6,890,490,490 in August. Compared with October in other years the showing is as follows:

1907	$8,196,003,441	1904	$7,476,864,592
1906	9,344,043,162	1903	5,233,275,203
1905	8,026,012,917	1902	7,496,845,030

Boston Clearing House exchanges in October were $739,166,914, compared with $555,867,314 last month and $795,210,380 in October a year ago.

Manager Sherer, of the New York Clearing House, announces that the totals of the weekly bank statement will be issued as usual to-day. No statement in detail of individual banks, however, will be made public.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Herbert H. Asquith, Chancellor of the British Exchequer, in his budget speech of April 18, declared that the government would require from all employers full statements of the salaries paid every employee. This statement seemed at the time to be comparatively unimportant, and it called forth little comment, but up to the present time it has increased the revenues from sources hitherto untouched by approximately $50,000,000 a year.

It is stated that seven savings banks of New York City, with total deposits of over $500,000,000, have received only 2,000 notices of withdrawal.

Industrial.

The *Iron Trade Review* says that clearance papers were filed in the Buffalo Custom House on October 21 for three canal boats carrying cargoes of Chinese pig iron from New York to the Dominion Iron & Steel Company, at Welland, Ont. The shipment consisted of 500 tons of pig iron made at Shanghai, China, and sent from that place to New York last May. The value of the pig iron was registered at $8,750, or $17.50 per ton.

These figures, taken from Lewis's circular, show the total consumption of copper in Europe for the first nine months of the present calendar year, the figures being given in tons:

	1907	*Decrease*
England	45,740	11,097
France	38,622	2,475
Italy, Austria and Russia	13,010	1,833
Total	97,372	15,405
Germany (eight months)	78,390	2,114
Total reported	175,762	17,519

It is reported that the Union Pacific Railroad has discharged between 4,000 and 8,000 workmen. Rumors that the Lehigh Valley Railroad Company contemplates discharging 4,000 men are current.

The Boston News Bureau reports that sixteen of the great steel companies were carrying 423,970 men on their pay rolls on October 1, as compared with 445,530 men on January 1, the reduction in nine months being 5 per cent. Four concerns actually report more men employed on October 1 than on January 1, the Baldwin Locomotive Works being conspicuous in this respect with an increase of 1,000 men.

It is reported that the Kings County Light & Power Company has discharged about 500 employees. Many of these were in the construction department, while others were in the advertising force and clerical departments.

This table, taken from the *Western Tobacco Journal*, gives the output of tobacco manufactures in September, with comparisons:

	September, 1907	*August*, 1907	*September*, 1906
Tobacco, pounds	30,162,661	32,345,011	28,641,831
Cigars, number	649,559,007	662,756,540	612,252,090
Small cigars	66,277,000	73,922,000	69,322,500
Small cigarettes—			
At $1.08	353,322,768	402,116,037	347,780,592
At 54 cents	63,673,370	72,527,500	64,757,296
Total	416,996,138	474,643,537	412,537,888
Large cigarettes	1,464,300	1,340,880	999,100
Total	418,460,438	475,984,417	413,536,988
Snuff, pounds	2,021,031	1,942,801	1,893,522

The Amalgamated Copper interests have reduced wages of Butte miners from $4 to $3 50 per day.

On Monday it was announced that the New York, New Haven & Hartford Railway Company had laid off 2,500 men.

Calumet & Hecla has given notice of a cut in wages, amounting to 12½ per cent., to take effect December 1.

Railroads.

It is stated that the New York, New Haven & Hartford Railroad Company has purchased the New York, Westchester & Boston Railroad Company and the New York & Port Chester Company. This will give the New Haven road a connection for their electric lines with the subway at One Hundred and Seventy-seventh street.

It is reported that the Rock Island Railroad system has laid off 2,500 men from its construction and track forces from Illinois to Texas. The maintenance crews were not disturbed.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The country at large has this week felt the after effects of last week's financial disturbances at New York and other eastern cities. Prompt imitation of New York's action in curbing and limiting the force of these disturbances has, however, allowed of necessary readjustments to meet changed conditions with a probable minimum of immediate friction and without the sacrifices found necessary at the metropolis. The leading clearing houses of the country have followed New York's lead in issuing certificates, and where this has not been exactly followed, steps have been taken to restrict the outflow of cash from business and other banks. The entire country, in fact, may be said to have gone upon a check or credit basis, pending the passing of the uneasiness, which seems now to have almost entirely calmed down. Coincidently with the enforced employment of credit instruments has been witnessed a marked increase of transactions on a purely cash basis, and large quantities of stocks, grain and other produce have changed hands, in most cases at concessions. In the case of grain and cotton purchases these have materially aided the work of relieving the present congestion, as illustrated by the engagement of $24,000,000 of foreign gold for import. Naturally, there has been some dislocation of the country's business, notably in the item of the domestic exchanges, which has reacted on the collecting and forwarding forces by for a time stopping the buying of wheat in the northwest and of cotton at the south, and there has also been a sensible quieting down of jobbing trade activities, some reduction of forces in railroad improvement work and in other industries, and some effect also upon retail trade, which, however, aided by fine fall weather, has given a good account of itself this week. Naturally, collections have shown some effect of the disturbance, and later effects of the reduced buying of grain and cotton for cash in the country districts will be closely scrutinized.

Perhaps the most notable feature of the readjustment of conditions forced by the present situation has been the bringing down of prices of commodities to a basis where lagging demand is expected to revive. Grain and cotton have been quick to respond, and now live stock and meats, particularly hog products, are lower. Copper has already felt the effect of the sharp decline in quotations in sales of many million pounds, possibly, of course, for speculation, but helpful to our export trade in this commodity. In the dry-goods trade there is a gréater disposition to concede that a lower level of values for several lines of cotton goods is likely, following the cuts made by jobbers recently. This, however, refers more largely to distant deliveries than to immediate business, and the same is predicted of some lines of woolen goods for next fall. The wool market is very steady though quiet, and the leather trade is now reaping benefits of earlier curtailment in strongly held good grades of sole leather. Eastern orders for shoes are small but frequent, and prompt delivery is requested. The iron and steel industry reports new demand quiet as a whole, with a tendency to ease in prices, and the leading interest notes a moderate reduction in the volume of unfilled orders. Lumber, hardware and, in fact, building material of all kinds are in slow demand, in sympathy with the buieter tone in building and the approach of the winter season. That there is a very large business doing in many lines the country over is, however, evidenced by the widespread reports of car shortage affecting the movement of grain at Buffalo, of coal at all leading points east and west, and of lumber in the Pacific northwest.

The feature of the week in the banking situation was the facility—it might almost be said the ease—with which it passed from a cash to a credit or check basis. The New York Clearing House adopted certificates on October 26 and made its first issue October 28. Chicago, for the first time in its history, decided to issue certificates, and so also did Baltimore, Boston, Philadelphia, Cincinnati and the majority of the other large cities of the country. A large number of other clearing houses agreed to limit the withdrawals of cash to small sums and to follow the lead of New York in stamping their checks, payable through their Clearing Houses or in clearing house funds. The New York City savings banks agreed to demand notice of withdrawal, and this action was generally followed throughout the country, in some instances by trust companies where the state laws allowed. The result was that anything like a widespread "run" became an impossibility, and the situation was immediately benefited. In Oklahoma the governor declared a week's holiday; in California, Nevada, Oregon and Washington shorter holiday periods were set to help the banks, but in the cases of California and Washington the banks in many cities found it unnecessary to observe the holidays and kept open. The prompt recovery of confidence is perhaps best illustrated by the failure of depositors to give notices of withdrawal from savings banks and by the cancellations later of these notices by many depositors. The scarcity of currency, promptly following the outbreak of the trouble, occasioned note, but many large cities made heavy shipments to country banks. In the promptness with which the fear of "runs" was met and removed, the present trouble will probably become memorable.

Stock market quotations at New York are steady at substantial recessions and sentiment is more bullish, the market early in the week having suffered from a severe liquidation, due to the calling of loans by banks. Standard railroad issues, in particular, fell in many cases to the lowest figures in a decade. Speculative buying has been generally discouraged by banking authorities. The bond market is fairly active, with lower prices throughout the list, and in some cases bids are absent for prime issues. Foreign exchange is higher after having broken to as low as 4.83 for demand sterling, which sold up on Friday to 4.88. There have been engagements for the shipment of gold from Europe to New York to the amount of $27,000,000.

Pig-iron markets are very dull, and wherever business has been done price concessions have ruled. Southern iron for next year's delivery appears to be especially weak, as low as $15 being mentioned as the quotation. Production is being curtailed, which movement will temper the fall in prices, particularly as stocks are not burdensome, the leading interest reporting only 88,000 tons as of September 30. Demand for tinplate is very light and outputs are being considerably restricted. Sheets are easier in price, and the like is true of quotations on steel bars at the east, as well as bar iron. New business in structural material is of small proportions, although here and there a fair tonnage has appeared. Steel rails are a little more active in comparison with recent marked dullness, a Japanese order for 13,000 tons, together with an order for 12,000 tons, the latter being for prompt shipment, having been placed within the week. It is also reported that an order for 7,500 tons of girder rails for Australia is pending. Demand for ship plates is fairly good. Old material has suffered some marked declines. Orders for furnace coke for delivery during the first half of 1908 have been placed at Pittsburgh, but the industry in general is preparing to curtail production unless outputs go directly into consumption. Copper is much firmer, lake brands having sharply turned upward to 14¼ cents after being quoted at a shade under 12 cents. The price on electrolytic ranges from 13¾ cents to 14¼ cents. The recovery is attributed to heavy speculative buying and short covering oversea, but domestic business did not come out in large proportions, the higher levels and the condition of the money markets having caused American consumers to act conservatively. Some small producers have probably cleaned up stocks as the result of the present spurt, miners' wages are being reduced, outputs are still being restricted, and exports in October—28,786 tons—were next to the largest on record, the heaviest shipments oversea having been in January, 1904, when the total was 29,085 tons; but it is felt that the improvement may not be permanent until conditions in the brass-goods, wire and electrical trades take a turn for the better.

Financial stringency and the dislocation of the usual facilities for marketing farm products have been a bearish feature in the grain and cotton markets, finding expression in sharp breaks in prices and the temporary suspension of all but actual cash dealings at leading markets on several days of the week. For instance, speculative dealings in grain were reported suspended at Duluth and Minneapolis early this week. Later on, however, with the resumption of the ordinary processes of trade, prices rallied, temporarily at least, aided by good export demand in the case of wheat, less satisfactory husking returns or smaller movement in the case of corn, and advices of frost damage in the south in the case of cotton. Wheat at one time (Tuesday) was 3 to 4 cents lower than at the close last week, but regained some of the loss later. Wheat is 5@10 cents lower than the high levels of October 15. Corn, weak early, regained most of the loss later, though it is still 4@7 cents below the high level of mid October. Oats, 2 cents lower early in the week, regained the loss later, but is 4 to 5 cents below the high level of October 15. Relatively, most weakness was shown at the west, where the inability to get money or sell domestic exchange to get wheat through to the coast was a feature depressing to values.

Liquidation of cotton, both spot and futures, here and at the west, was a reflection of the financial unsettlement early, and though rallying later the general trend has been downward. The lowest levels of the week were struck on Monday, when futures were 30@35 points lower than last Friday and spots 15 points off, but more cheerful advices later as to financial conditions and reports of killing frosts in the northern half of the belt aided values upward, most of the early loss being regained. Overselling by shorts was a source of support also. Cotton is 1 cent below the level of October 14, and 2¾ cents below the high point of the year and of the season touched early in September, while at about the same level as a year ago.

The Kentucky tobacco crop of 1905 is not all sold, the 1906 crop is hardly any of it yet sold and the 1907 crop is being pooled and housed in warehouses in Louisville, Owensboro and elsewhere. The pool are awaiting buyers meeting their prices and will not sell 1907 before that of 1905. This tobacco, held so long, has been advanced upon by banks, and this adds considerably to the scarcity of money in the producing territory.

Bank clearings for the week ending October 31 aggregate $3,021,488,000, 5 per cent. over last week and 3.6 per cent. in excess of this week last year. Outside of New York exchanges amount to $1,175,859,000, a loss of 5 per cent. from last week, but a gain of 8.5 per cent. over the week last year.

Business failures for the week ending October 31 number 223, against 220 last week, 163 in the like week of 1906, 160 in 1905, 200 in 1904 and 216 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending October 31 aggregate 4,792,349 bushels, against 4,765,589 bushels last week, 4,492,974 bushels this week last year and 6,672,888 bushels in 1901. For the first eighteen weeks of the fiscal year the exports are 68,267,815 bushels, against 62,666,561 bushels in 1906-07 and 105,991,486 bushels in 1901-02. Corn exports for the week are 666,340 bushels, against 749,122 bushels last week and 1,300,221 bushels in 1906. For the fiscal year to date the exports are 17,360,273 bushels, against 14,617,159 bushels in 1906-07.

IN CANADA.

Canadian trade is good as a whole, though money is tight and collections are still complained of. Cool weather and the movement of wheat at the northwest have made for an enlarged retail trade and for some gain in collections at the west, however. Heavy winter goods make relatively the best report, and, with cotton goods, are about the firmest commodities dealt in. Cotton mills are far behind on orders, and this class of commodities as yet shows no sign of weakening. Montreal reports large quantities of grain moving for shipment, but other country produce is not arriving as freely as desired. High prices of feed are inducing farmers to sell cattle. Toronto reports heavy winter goods and millinery active, as are also groceries. Country trade is brisk, and little reduction in industrial activity is noted. Winnipeg reports grain moving freely, and collections are better, while retail trade is brisk. Trade is good on the Pacific coast despite high prices for money. Lumbering and mining are active. Failures for the week number 25, as against 39 last week and 21 in this week a year ago. Clearings for the week aggregate $82,387,000, a loss of 14 per cent. from last week and of 1.7 per cent. from this week a year ago.

TRADE REPORTS.

At New York a fair amount of business has been transacted in dry goods, notably silks, dress goods and cotton goods. Prices are well and firmly maintained in silks, but there is some indication of a weakening in cotton goods, as anticipated. Cotton yarns continue unsteady in price and have a lower tendency. The demand is not active, purchases, as a rule, being only to fill immediate requirements. Trade in woolens for men's wear is not so good, and in this line many cancellations of orders are being received. A fair volume of sales is reported in clothing, but collections generally are backward. The raw-silk market continues quiet, and both dealers and manufacturers are conservative in their buying. Woolen and worsted yarns are, however, moving freely, and prices hold firm and high. In cloaks, suits and waists, business continues good and out-of-town orders are liberal, but complaint is heard of slow collections. The retail trade shows some falling off. Manufacturers of shirts, neckwear and gloves and jobbers of hosiery and knit goods report business brisk and have as many orders as they can conveniently fill. There is no overproduction, and stocks in the hands of retailers are not excessive. The financial stringency has generally affected the fur trade, as importers as well as manufacturers have been unable to secure their customary bank accommodation. Manufacturers of fancy feathers as well as of ostrich feathers are doing well. Wholesale notions show no improvement, collections are slow, and the general disposition is to buy in small quantities. Wholesale grocers say the financial upheaval has seriously checked sales for the week, and only absolutely necessary purchases are being made. The retail trade, however, continues fairly active. Though receipts are only moderate and demand fair, the price of butter has dropped 1½ cents. Cheese is unchanged and in fairly active demand. In confectionery, the high prices of the raw materials continue, but manufacturers have orders to keep them busy for some time to come. Collections continue slow. Flour receivers say the drop in wheat has tied up jobbers, and sales are made

only at a concession. The local market for live stock and dressed meat continues active, and the drop in price has stimulated trade. Hard fiber cordage is in better demand than it was last month, when business, on the whole, was disappointing. In automobiles there is considerable activity, notwithstanding the unfavorable local conditions of the money market. Business in cigars and tobacco is moderate, raw material is high and some grades are scarce. In drugs and chemicals a moderate business was transacted, and collections are fair. In hardware and cutlery, trade conditions have not materially changed, and collections in the immediate neighborhood are difficult to make, though in the south and west maturing obligations are promptly met. Local trade in china and glassware is quiet. Manufacturers of structural steel, while still busy, are not receiving much new business, and some cancellations are reported. Pig iron is quiet, and production may be reduced. Copper prices have advanced, and some business, of which the larger part was export, has been done. Manufacturers of electrical goods report business moderate but collections good. The real-estate market has been dull, but prices have been maintained. Money for mortgage loans shows signs of becoming more plentiful, and companies dealing in guaranteed mortgages report many sales during the past few days. Business in lumber and building materials is dull, and the outlook for the winter is not considered promising. In the wholesale paper trade there is a somewhat lessened demand but a continued upholding of prices. The slowness in collections is still apparent, and there is a closer scrutiny of credits.

The following telegrams show trade conditions at the cities mentioned for the week ending November 1:

BOSTON.—Jobbing trade in dry goods is quiet after completion of deliveries under first orders for fall and winter merchandise. There is some backwardness in reorders from retailers, and they are generally showing slowness to buy goods, except such as are actually needed. Retail trade has not developed actively to the extent that had been expected, and many dealers with large stocks on hand are awaiting sales for funds to meet November obligations. Cotton goods in the primary market hold firm notwithstanding the announcements, made first by a Chicago house and later by a New York house, of lower prices than are asked by mills. Boston jobbers have to some extent followed in announcing lower prices than have been prevailing. There is more general expectation that price reductions will be made by mills after completion of pending contracts. Buying for future requirements has been materially checked. Tanners and leather dealers are proceeding cautiously and have the leather market well in hand; prices are unyielding. Shoe manufacturers do not receive large orders, but wholesalers appear to be in need of shipments for immediate requirements, placing orders from week to week rather than putting in large stock orders. Both grain and wood alcohol continue in steady demand. Trade in furniture, carpets, upholstery and draperies continues backward and is not of the volume that might be expected at this season; collections are slow. No marked change is evident in lumber. Northern and eastern lumber is in slack demand, no change in prices being observed. Southern lumber is in fair demand and prices firm. Western lumber and hardwood quiet. Pig iron is very quiet, while in structural steel, orders are few. Paints and painters' supplies, glass, etc., are in seasonable demand and prices firm. Builders' supplies, such as bricks, cement, drain pipe, etc., are moving fairly well, prices being unchanged. Bituminous coal is in short supply. Anthracite is in seasonable demand. Wholesale liquor dealers report an increasing demand for all grades of liquors. Business is generally increasing in volume and dealers report good orders from out of town. Leaf-tobacco dealers report a fair business during the past ten days, although the tendency is to purchase for immediate wants. The market is steady and prices high. The reported reductions in prices of provisions in the west have not been reflected in quotations in this market. Trade continues dull and collections slow. For desirable grades of butter and eggs full prices are realized.

PROVIDENCE.—Trade conditions here have been in an unsettled condition because of the suspension of one of the large trust companies. Some mercantile failures were anticipated, but none have yet occurred. But for this occurrence general business conditions are normal. Manufacturing jewelers report a good run of trade, but not quite so heavy as last year at this time. The machinery and tool trade reports considerable cancellations of orders. Collections are slow.

PORTLAND, ME.—Late estimates on Aroostook potato crop place it at 11,000,000 bushels, against 17,000,000 bushels last year, with present prices 50 cents per barrel higher. General trade conditions continue favorable, both wholesale and retail, and the current year is expected to close with favorable showing as regards profits.

PHILADELPHIA.—Wool is comparatively quiet, stocks of desirable grades are low and prices are fairly steady. The cotton-yarn market continues rather unsettled, prices in some instances showing considerable concessions by sellers, and sales are comparatively light. Dry-goods jobbers report collections slow and trade fair. Retailers have had a fair week, and some of them claim that October's sales equaled or exceeded those of 1906. Flour is weak, in sympathy with wheat, and business is dull. Chemicals and dyestuffs are fairly active and prices keep firm. Paints and glass are active at good prices, and there is every indication of a good demand for some time to come. Lumber manufacturers and jobbers are slowing down a little, large credit transactions not being encouraged. Retailers are busy, but report money scarce. Conditions existing in the leather market for some time past still continue, with no indications of a material change. These conditions are apparently due to the money market and the absence from the market of buyers. Glazed kid shows no activity, buying being looked upon as merely speculative, and lower prices for raw material being looked for by some dealers. Leather demand is quiet; prices unchanged. Goatskins show continued weakness, and there is no indication of an appreciable change in general conditions in the near future. Tobacco purchased in the past and held subject to buyer's orders is now being shipped heavily. Smaller buyers are taking their usual amounts, but large buyers are not in the market, except for odd things to fill in. Factories are busy, the production of cigars for the first six months of this year being 6,000,000 more than in 1906, which was a record year. The condition of money and expectations of lower prices later have an adverse influence on new sales now. Liquor distillers are closing contracts for new goods better than was expected, in view of the money conditions. It is arranged to start later and stop earlier, so that the new production will be half to three-quarters of the usual volume, to strengthen the market, somewhat affected by 10 per cent. advance in prices on new goods. Iron conditions are without change, the financial situation inclining the buyers to proceed cautiously and await developments. Buying is in small lots, for immediate uses only. Prices of finished materials are weak, but pig iron is about the same as last week. There is a good demand for coal, and prices are attractive, but congested transportation is increasingly felt, hampering deliveries. Actual money not obtainable, and quotations are merely nominal, anywhere from 6 per cent. to 8 per cent. New York exchange is very scarce, and while it is rumored some fancy prices have been paid, yet there is no quotation.

PITTSBURGH.—Despite disturbed financial conditions there has been no material change as to iron and steel. The pig-iron market remains in the same stagnant condition as for weeks past, with no transactions worth mentioning and but little inquiry. Bessemer still maintains its strength, but other grades of iron are weaker. No sales of steel billets of sufficient tonnage to establish a quotation have been made, and there is little demand. Bessemer is nominally quoted at $28 and open-hearth $29, Pittsburgh. While the volume of new business received by the mills is not up to expectations, it is as large if not larger than for some time past, and the outlook is considered very fair. Spot pig-iron quotations at the valley furnaces are as follows: Bessemer, $22; chilled basic, $19; No. 2 foundry, $20.50, and gray forge, $20. Standard Connellsville furnace coke is quoted at $2.90 to $3, and foundry coke, $3.25 to $3.50, at the ovens, with a tendency to lower prices. Manufacturers and jobbers of merchandise report their business as large as at this period in 1906, some claiming an increase. Some houses report collections as good, a few that they are slow. The feeling in local financial circles is one of confidence as to the future. The temporary embarrassment of three local houses has not caused uneasiness, and it is expected that they will be able to rearrange their affairs in a satisfactory manner.

BUFFALO.—Wholesalers and jobbers in dry goods, boots and shoes, hardware, iron and clothing report trade as good as last week. In the lumber line trade is reported to have fallen off, owing to the rainy weather and quiet in building. Collections in some lines are normal, while in others they are reported from fair to slow.

BALTIMORE.—Continued cool weather has improved local retail trade, and collections from that source show some improvement. Millinery jobbers have had a satisfactory October business. Wholesale business in shoes on spring orders is fully equal to that of October last year, but new accounts help to make up the summary. Clothing manufacturers also report a satisfactory spring order business, though individual orders generally are not as large as last year, so far. Stocks, however, in this line with the retailer are fairly well cleaned up, and merchants, particularly in the cotton sections, before ordering their full expected requirements, are awaiting the marketing of the cotton crop. Bankers, however, in some sections are urging the merchants to sell at prevailing prices, thus releasing obligations to them and reducing indebtedness to supply firms who feel materially the delayed settlement of accounts. Country paper is not regarded as desirable as in former years, owing to the prevailing conditions in the money market. The issuance of Clearing House certificates, the first since 1893—local banks acting similarly with the clearing houses of other large cities—will be of material financial advantage, results of which, it is believed, will be apparent during November through the large movement of grain, which, owing to the continued stringency in the money market, has hitherto been comparatively moderate. The receipts for export of coal, lumber and other articles will also materially add as a factor toward an easement in the money market. Pending these anticipated results, general loans outside of the lines mentioned will not be extended. The coal market continues very active, better grades commanding higher prices. Some industrial lines have given evidence of inability to obtain the usual bank assistance. Building operations are quiet and real estate is rather dull. Jobbers of hosiery and knit goods report a good week in business and future orders. General collections, as evidenced by the deposits, show no material change since last week, but November is regarded as likely to bring about a noticeable improvement in general conditions as to collections, and otherwise.

CLEVELAND.—There is some complaint regarding collections, but the business situation is fairly satisfactory. The car shortage still hampers coal trade operations. The iron trade continues quiet. Banking transactions are governed by conservatism, and the application of the sixty-day rule by savings institutions has met with general approval.

CINCINNATI.—Business is quiet owing to the unsettled condition of the money market. Checking is small because sparingly honored. There is no call-loan market, and there is little or no movement of country currency. Wheat sowing is about completed. The acreage is larger than last year. Corn is being cribbed in some localities and is as fine as any ever raised.

CHICAGO.—Commercial interests are beginning to feel the effects of the change from a currency to a clearing house certificate basis. There has not been sufficient time, however, for business men and the west to become fully conversant with the change. While trade has suffered a slight reduction in volume in all lines, the most conservative interests do not hesitate to say that they look for a reduction in buying by interior distributers from now on, as the scarcity of currency will naturally curtail purchases by jobbers as well as consumers. Retail business so far has not been checked and is of good volume. Prices on bleached cottons have suffered a slight reduction, and sales have fallen off as compared with last week. For the general run of heavy goods there is also a slight curtailment in orders. In the iron and steel trade buying has been reduced and the market is easing off, although the mills are fairly well supplied with old orders, and therefore production is still of large volume both in finished and raw material. Coal is being moved in large volume, and the scarcity of cars is still an important factor. Business in lumber is down to the minimum, with the lightest sales at this season in a number of years, and prices on yellow pine and hemlock are being shaded. Hides are ½ cent lower. Butter and potatoes have declined, owing to a lighter demand and increased offerings. Cars continue in short supply both east and west, and a blockade exists at Buffalo which restricts the movement of grain to the seaboard. Reduced receipts of live stock result from a scarcity of currency and a restricted demand from packers, some of whom have reduced prices 10 per cent. Grain has suffered severe declines, wheat dropping nearly 12 cents, corn over 3 cents and oats 6¾ to 7¼ cents within a week. Pork has declined $2.40 per barrel in less than a month, and lard and ribs are off proportionately. Chicago banks are issuing Clearing House certificates for the first time in their history, over $1,000,000 being put out in the first three days of the week. All banks here are paying debit balances with these certificates, and all banks have stopped shipping currency to the interior, except in emergency cases, and have also refused to pay out savings deposits except under the same conditions. Notices of withdrawals of savings deposits at all the banks aggregate only $2,500,000, part of which have been canceled in the past few days. Banks are strong and are conserving their supplies of currency. Commercial checking accounts are unrestricted. Brokers are taking stock trades for cash only, and Chicago banks are using this method of drawing down their eastern balances by forwarding such orders to New York. Gold engagements in London by Chicago banks aggregate over $3,500,000. Collections are fair, but are expected to become slow.

EVANSVILLE.—At a meeting of the banks on October 28 it was agreed that all trust companies and savings banks should avail themselves of a thirty days' notice, permitted by law, and that all banks carrying deposits from country correspondents should pay not to exceed 10 per cent. of their balance, as based upon their actual balance. All checks for less than $100 shall be paid on presentation with cash, and all checks for more than that amount shall be paid by certified check. The balances on clearances shall be paid by Clearing House certificates. There is apparently plenty of currency on hand, but in view of the action taken by other cities, this has been compulsory. So far there have been no runs.

INDIANAPOLIS.—Influenced by the action of banks in other cities, Indianapolis banks have limited the amount that depositors may draw to $100, but authorities say the local monetary situation is fairly satisfactory. Many country banks have also limited depositors, and the State Banking Department has sanctioned this action. Trade continues fair, with collections fair to slow. Demand for money is strong. Business is good. The general tendency in banking and mercantile circles is to be very careful. Failures in the state for October exceed those of October 1906, but they consist mostly of small houses.

LOUISVILLE.—Business in all manufacturing, jobbing and retail lines is good, and dry-goods and hardware wholesalers report an increase over a year ago. Wholesale hat and shoe dealers, and manufacturers of clothing and shirts, all report fine orders coming in for spring. Whiskey distillers and dealers report business good, especially in straight whiskey and bottled in bond goods. This market is doing a large amount of business on account of prohibition in Georgia, and the voting dry of Birmingham and Jefferson county, Ala. Collections are slow and money is very tight. Banks here began using Clearing House certificates on Monday and there is no great scarcity of currency. The local banks are calling a good many of their loans, especially where collateral is used, and this is causing considerable trouble to some borrowers as other banks are not willing to lend. The collateral has in many cases greatly depreciated since the loan was made.

ST. LOUIS.—The conditions that prevail in financial circles are similar to those existing in the east. The banks are asking that all checks be paid through the Clearing House, but where it is absolutely necessary, small amounts of currency are paid out for meeting pay rolls, and in extreme cases some currency is being sent to country banks. All of the banks here are in a sound condition and they accept the checking system with good grace. General business is affected to some extent, but not to the degree expected. Manufacturers of shoes have about 40 per cent. of the striking employees back at work, but when working full will want only about 75 per cent. of all employees back. It is the desire of the manufacturers to curtail the output and to buy more largely in other markets. However, shoe houses are doing an excellent business. Forward trade in dry goods, hats and kindred lines is dull, but filling-in orders are very gratifying. Groceries drugs, paints and oils show some activity at firm prices. Lumber, hardware and all grades of building material display a decided falling of as compared with last week. Favorable weather has stimulated retail trade among department stores. Millers report the flour situation as very satisfactory, and export

trade continues good at firm prices. Collections range from fair to good.

KANSAS CITY.—The restrictions placed on the banks through the Clearing House limiting the withdrawal of funds has not interfered with trade to any remarkable extent. Travelers have suffered some inconvenience in getting needed funds. Jobbers, however, report that the volume of sales is up to expectations. Inclement weather has affected retail business. Collections are good.

MILWAUKEE.—Business in industrial circles is good. Trade in jobbing and retail lines is quite satisfactory. Collections were somewhat disturbed by the flurry in the money markets, but conditions in this respect, as well as in money matters, are now more settled.

SIOUX CITY.—Trade in all lines shows decrease, owing to money market and bank conditions. Collections are fair.

DAVENPORT.—Trade has been more or less quiet all week, due principally to financial conditions. Savings banks have taken advantage of the sixty days clause. National banks are requesting depositors to use the check system when possible. Only a few concerns have laid off men.

ST. PAUL.—Trade has not yet felt the effect of the financial situation, but it is anticipated that next week there will be some let up. Collections have been remarkably large. The protective policy adopted by the banks in this state was expected to have an immediate effect on collections, but many millions have already been spent on grain and this money is now returning. The elevator interests have created a doubtful feeling as to the ultimate solution of the present crisis by refusing to purchase grain. They offer to store it, but will not buy. Nobody doubts that the effect on collections will be intense. Cattle shipments have been extremely heavy this month. The circulation of currency is likely to be normal shortly. The solution for the movement of grain is thought to depend on shipments of gold from the east.

MINNEAPOLIS.—The action of the Clearing House banks on Monday in restricting payments of currency resulted in a temporary cessation of grain buying in the country, but measures looking to relief in that direction are being considered by leading grain men, bankers and jobbers. While general business suffered during the last half of the week because of this condition, the situation has some redeeming features. Country merchants are buying for requirements and collections are fair. Retail trade has not suffered materially because of prevailing conditions, but would be materially benefited by colder weather. Manufacturers of flour are running on full time, and buyers are ordering quite freely Banks have thus far been able to handle the drafts of such manufacturers without delay.

DULUTH.—Since last Monday the local banks have not been paying out currency, excepting in small amounts for personal needs. This condition will probably not continue longer than one week. Retail trade has decreased about one-half on account of this action of the banks, and the Board of Trade has also been closed for the same reason.

OMAHA.—Trade in general is a little quiet on account of financial conditions. However, the impression prevails that affairs are well in hand, and that there will soon be a change for the better. Collections are only fair.

LINCOLN.—Local jobbers report trade normal, with fair collections. Retail trade has declined considerably.

SIOUX FALLS.—Business is quiet and collections are slow, owing largely to the disturbed banking situation. All business is on the check basis.

CHARLESTON.—Wholesale trade is quiet, but retail trade is good. Considerable cotton is being held for better prices, consequently collections are slow.

RICHMOND.—In most distributive lines, but especially provisions, dealers are busy. Travelers are out with holiday samples, and ordering is satisfactory. Metals generally show a slight decline, and the demand for lumber has decreased. Building is less active and labor more plentiful than at a comparative period last year. Machinists and mill-supply houses are busy. Tobacco is being marketed in larger quantities, and for this good prices are being received. The cotton crop has practically all been harvested, and for this there is no abatement in demand. Collections are fair to good, and retail trade shows improvement.

AUGUSTA.—Collections are improving. Trade in all lines is active.

ATLANTA.—Financial stringency has affected collections, general business and the movement of cotton. Clearing House certificates are being generally used to relieve the currency shortage with good effect.

BIRMINGHAM.—Trade in all lines is of fair volume, though many jobbers are restricting credit to some extent until prevailing financial strain is over. Banks have adopted the use of Clearing House certificates and only allow each depositor to draw $25 per day in cash, except for pay-roll purposes. Collections are reported fair. Pig iron is quoted at $17.50 to $18; inquiries are not very brisk.

MOBILE.—Trade in all lines is inactive. Collections are slow, but confidence seems to prevail. Money is somewhat tight, local banks having restricted withdrawals owing to conditions in New York. All local banks are believed to be in good shape.

MONTGOMERY.—Cotton is moving slowly, owing mainly to low price, and as a result trade in all lines is very quiet. Collections are poor.

CHATTANOOGA.—Local trade conditions have apparently been but slightly affected by the lateness of the Alabama and Georgia cotton crops, and dealers report an average fall trade. Collections continue slow. Building operations are making uninterrupted progress, and weather conditions are fair.

NASHVILLE.—As a precautionary measure, the Nashville banks have, like those of many other cities, placed a restriction upon the payment of checks, except through the Clearing House, limiting the amount to $50 per week to each depositor. The general feeling prevails that the action was wise, owing to conditions existing elsewhere, and the banks of this city are regarded as on a firm basis. Trade, both retail and wholesale, is moving along about as usual. Collections, however, are not better than fair. The car shortage is still felt by large shippers.

MEMPHIS.—Most jobbers report a good volume of filling-in orders. Collections are good. Others report reduced sales and slow collections, owing to inability to secure currency from the usual sources. Memphis commercial banks are limiting withdrawals to $100 per day to any one depositor, and decline to accept country checks as currency. They take them only for collections, but do not credit the same until collected. This will doubtless retard collections. Savings banks require thirty and sixty days' notice of intention to withdraw funds. Financial stringency delayed the movement of cotton early in the week, owing to inability to sell sterling exchange, but exchange is now being sold and movement has improved slightly.

LITTLE ROCK.—Trade in general has not been seriously affected by the financial stringency, but collections are slow and very little cotton is moving.

NEW ORLEANS.—Retail trade is only fair and jobbers report business very quiet, with backward collections. Crops are in good condition, but cotton is maturing slowly and the rice section has had a little too much rain. Sugar making is under way, with prospects of a large yield. The strike of cotton handlers on the levee has been settled and cotton is being loaded rapidly, thus relieving the tension to some extent, but difficulty is experienced in handling exchange. The Clearing House banks adopted resolutions, effective October 28, reducing withdrawals of cash to $50 a day, and the savings banks put the sixty-day regulation into force. Business is much reduced in consequence of these restrictions, but otherwise local conditions appear to be healthy.

FORT WORTH.—Notwithstanding the stringency in banking circles, trade keeps up well in all lines. So far few failures have occurred and very few are looked for. Cotton is still being held by farmers, and few buyers are in the market on account of the action of the banks as to exchange. Local financial institutions claim to have the situation well in hand, and, following the action of banks in other centers, are enforcing the rule of placing a limit of $50 on daily withdrawals. However, checks for any sum will be paid through the Clearing House.

DALLAS.—Jobbing trade is quiet, but retail business is very satisfactory. Collections are very slow. Farmers continue to hold cotton, and but little of it is being sold.

WACO.—Trade is very much demoralized, due to disturbed financial affairs. Banks, as a rule, are refusing loans and pushing collections. Cotton is about all picked, but is being held for better prices.

SAN FRANCISCO.—City banks are disregarding the governor's holiday proclamation and are believed to be impregnable against ordinary demands. Prevailing conditions, combined with approaching municipal election, have induced a cautious attitude toward the commencement of new enterprises or renewing expired engagements.

SEATTLE.—The volume of trade is well up to the average. Lumber interests are elated over federal court injunction against railroads putting into effect advanced rates on eastern lumber shipments, pending the decision of the Interstate Commerce Commission. In the financial disturbance this city is an interested non-participant. The strong position of Seattle banks is exemplified in their failure to adopt the Clearing House certificate plan, as followed in practically all other leading cities in the United States. The banks are ignoring the holiday declared by the governor of Washington.

SPOKANE.—The volume of business done during October has been very gratifying in all lines. Collections have been especially good. Wholesalers report the month to be a record one in both collections and turnover. The suspension of specie payments by the banks, inaugurated on Tuesday, had no alarming effect, although it has agitated the public mind somewhat. The people in general, and producers in particular, are in easy circumstances. There is a good demand for all classes of merchandise, with the possible exception of lumber for eastern shipment.

TACOMA.—Despite the governor declaring Wednesday and Thursday legal holidays, the banks have remained open for all regular business, though reserving certain rights. Lumbermen have secured a temporary injunction against the Hill and Harriman lines in the matter of advancing lumber rates, which were to go into effect November 1.

PORTLAND, ORE.—Oregon banks are in excellent condition, and the feeling prevails that they have controlled a situation made temporarily acute by eastern financial conditions. Trade, though somewhat affected, is of satisfactory volume.

TORONTO.—Wholesalers are receiving excellent orders for sorting lines of winter goods. Cold weather has helped this demand. In all lines of dry goods large shipments are going forward. In such lines as men's haberdashery and women's millinery and clothing, the business is exceedingly brisk. There is little change in collections by dry-goods men. While from a small number of districts they are slow, they are generally quite satisfactory. The recent advance in woolens came unexpectedly, and Canadian prices will advance accordingly. Although cotton prices in other countries are easier, Canadian mills are so far behind orders that there will be no change here. All lines of groceries are active. New prices on canned goods are very high. Large shipments of heavy hardware are being made by water. Sporting goods dealers are doing an excellent business. Country trade is brisk and is expected to continue so, owing to the splendid returns farmers are receiving for all lines of produce. There is talk here of a lessening of industrial activity in some lines, but as yet practically no steps in this direction have been taken, and there is an excellent demand for all kinds of labor.

MONTREAL.—Trade here is good, with wholesale stocks moving out well. Money is scarce. Collections throughout the country are fair. Dry goods are moving satisfactorily. Since the arrival of cool weather the demand for woolens and general heavy lines has been much increased. Shipments of cottons from mills are still slow. Groceries are quite active. New prices on corn and tomatoes are higher. The hardware trade is brisk. In general lines values are firm. The metal market tends toward easier prices. Receipts of country produce are light and prices hold high. Supplies here are reported to be nearly exhausted, while the demand is very active. All kinds of feed are holding at high prices, and as a result farmers are selling cattle. There is little export business in dairy products. Hides are higher. Grain prices continue firm, and large quantities are arriving here for shipment.

VANCOUVER-VICTORIA.—Despite tight money there has been no shrinkage in the volume of general business here. Wholesale lines are moving well and collections are fair to good. The crop of peaches has this year been heavy and prices have been good. The lumber trade is brisk, and the activity in mining is as great as ever. Farm products are ruling at high prices. Retail trade is good and there are few complaints heard as to collections.

WINNIPEG.—General trade is fairly satisfactory. Wholesalers are receiving good orders, and the outlook for future business is bright. Preparations for a good holiday trade are general. Collections are still slow from many western districts, but there has been considerable improvement since the grain movement began. Shipping is now heavy, despite some talk to the effect that high prices are causing grain buyers to act cautiously. Values of commodities are generally steady, though there is a tendency in most lines to advance further. Retail trade in all parts of the country is reported brisk.

FINANCIAL.

Money Market.

Conditions in regard to loans at New York and the other large financial centers of the country during the past week have been in a measure confusing. The removal of deposits by timid people from perfectly solvent institutions for the purpose of locking up currency, which has been one of the features, as it was during the free-silver scare of 1893, has had considerable effect. On the other hand, the public has bought stocks for investment at the prevalent low prices on a very large scale, paying for the same in cash, and this movement would probably have assumed larger proportions but for the fact that the savings banks have generally determined on requiring notice for the withdrawal of deposits. Engagements of gold to come from Europe, amounting to some $27,000,000, a large part of which will be received early in the ensuing week, have had a good effect on sentiment. This is also true of the recommendations from the United States Treasury Department that the national banks take out additional circulation, it being stated that some $30,000,000 of notes are printed and in form for immediate delivery if the security for the same is forthcoming. At the same time, the money market, not only at New York, but at other important centers, has reflected a scarcity of actual cash. The principal feature was the absence of offerings of time money. Loans of this description, during the early part of the week, at least, could not be obtained on any terms, and later on, when some comparatively small amounts came out, lenders wanted from 12 to 14 per cent., and the nominal quotations of 8 per cent for all maturities did not represent actual business. Commercial paper has been entirely neglected, 8@7 per cent. being the figures spoken of, but both local institutions and out-of-town buyers have shown no willingness to buy. Time money has ranged between 75 and 3 per cent., with renewals at from 20 to 50 per cent. There was considerable calling of loans on last Tuesday and Wednesday, and it is generally understood that the banking authorities have turned a deaf ear to applications from borrowers who desired to use the funds for speculative purposes. According to estimates the New York banks gained about $16,000,000 from the Treasury, but have shipped some $13,000,000 to the interior. The character of to-day's bank statement is necessarily more or less a matter of conjecture.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending October 31 shows an aggregate of $3,021,488,000, as against $3,194,807,000 last week and $2,915,223,000 in the corresponding week last year. Canadian clearings for the week aggregate $82,387,000, as against $95,922,000 last week and $83,811,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	October 31	*Inc.*	*Dec.*	*October* 24
New York	$1,845,629,000	.7	....	$1,948,289,000

New York Banks.

The assistance given by the associated banks last week to imperiled institutions mainly accounted for the large changes shown in the Clearing House averages published on Saturday, the 26th instant. The expansion of $10,864,700 in loans, for instance, in face of heavy stock market liquidation, was evidently the result of advances to the Mercantile National and other banks which were in trouble. In the same way the cash was depleted by $12,900,800, there having also been heavy shipments of money to the interior, which offset an increase of $13,613,950 in the government deposits. In the average deposits the decrease of $1,939,400 agreed well with the two preceding items, and the amount of reserve required was only $484,850 less than the week before. This resulted in a loss of no less than $12,415,950 in the surplus, so that there was a deficit of $1,233,300 in that item, although leaving the government deposits out of the reckoning the surplus would be $10,782,900. The figures of the statement compare as follows with those of the preceding week:

	Oct. 26	*Oct.* 19	*Changes*
Loans	$1,087,711,000	$1,076,846,300	I. $10,864,700

Foreign Exchange.

Very irregular conditions have prevailed in the foreign exchange market throughout the week. Financial conditions at New York and other cities resulted in an absolute absence of demand for remittances, demand sterling selling in the early part of the week at as low as 4.81.50, and long bills at 4.77. On the other hand, there was considerable bidding for cable transfers, which sold up to 4.86, the buying in this case being created by the arrangements to bring gold from London and Paris to New York. The successive announcements in this latter connection aggregated $27,000,000 of specie, some engagements, however, having been canceled or reduced. The announcement on Thursday that the Bank of England had raised its minimum discount rate from 4½ per cent. to 5½ per cent. was fully expected, and had been foreshadowed by the rise in call money at London to 4@4¼ per cent., and a private discount to 5½ per cent. or better. The supply of commercial bills was somewhat better on account of more liberal shipments of cotton, while sales of copper to foreign interests also furnished a certain amount of exchange. Toward the end of the week the tone of the market became firmer, demand sterling working up to 4.84½ on Thursday, while on Friday there was a violent rise in rates, demand going up to 4.88 and cables to 4.90, although even at these figures some further gold engagements were effected.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Oct. 26	*Oct.* 28	*Oct.* 29	*Oct.* 30	*Oct.* 31	*Nov.* 1
4.82 @ 4.86½	4.82 @ 4.86½	4.82 @ 4.86½	4.82 @ 4.86½	4.82 @ 4.86½	4.82 @ 4.86

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.05 @ 4.86.10	4.81.50 @ 4.83.00	4.83.00 @ 4.85.00	4.83.25 @ 4.84.25	4.83¾ @ 4.84½	4.86.00 @ 4.88.00

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.79.00 @ 4.80.00	4.78.00 @ 4.78.50	4.77.12 @ 4.78.00	4.78.00 @ 4.79.00	4.77.50 @ 4.88.00	4.78.00 @ 4.80.00

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.90; francs, 5.23⅛ @ 5.8¾; reichsmarks, 93⅛ @ 94¼.

The statement of the Bank of England for the week showed a decrease of £3,044,000 in specie, and its proportion of reserve to liability was reduced from 47.20 per cent. to 39.90 per cent. In the London open market call money is 4¼ per cent. and discount 5½ per cent. The Bank of France showed for the week an increase of 700,000 francs in gold. Its rate remains at 3½ per cent., discount in the Paris market being quoted at 3¾ per cent. At Berlin the bank rate is 5½ per cent., and the market the same.

The following table shows the value of imports and exports by great groups during the nine months ending with September, 1907, compared with the corresponding months of 1906:

IMPORTS.

New York Securities Market.

Wall street, on the whole, exhibits this week a more cheerful state of sentiment in regard to the future of the stock market. The action of the Clearing House Association in issuing loan certificates and the adoption of similar methods at other cities, together with the violent break in foreign exchange and the announcement of gold imports from Europe to the extent of fully $27,000,000, allayed the panicky feeling and gave assurance that the leading financial interests would be able to control the situation. At the same time there was no lack of unsettling influences, apart from the announcements which came early in the week that some smaller institutions had succumbed, owing to their inability to immediately procure cash with which to meet the demands of their depositors. Furthermore, money continued to be decidedly scarce. In the early days of the week time money was practically unobtainable at any figure, and later on the very limited amounts which were offered were held at such fancy rates as 12 per cent. for ninety days. Call money touched 75 per cent. at the beginning of the week, and renewals have ranged at from 20 to 50 per cent., while banks and other institutions not only called in many of their loans, but discouraged borrowing by brokerage establishments for the purpose of carrying new speculative accounts. The liquidation of loans was, in fact, very pronounced, especially on last Tuesday and Wednesday, the enforced selling of high-class securities causing on those days renewed breaks throughout the whole list. There seemed to be special pressure of this nature in St. Paul, Pennsylvania, Delaware & Hudson and Union Pacific, and some of these stocks sold temporarily at the lowest figures they have seen in many years. For a time there was, in fact, not a little nervousness in regard to the outcome of such a severe downward movement, though it was also urged that the calling of loans and liquidation would not have been permitted if the leading banking authorities had not been satisfied that the crisis was really over and that the market would absorb the stocks which had to be thrown over. Considerable foreign buying developed on the decline, but in spite of the tempting nature of the bargains which Wall street offers, foreign investors seem somewhat cautious in regard to taking hold of our securities. On the other hand, one of the most noticeable features has been the enormous absorption of stocks by American investors, especially in small lots. The buying at this time, it is estimated, has amounted during the past fortnight to scores of millions of dollars, and the extent of the movement is shown by the fact that the transfer offices of a number of the prominent companies are fairly congested with the large amount of certificates which are called for in consequence of this demand. It might further be observed that were it not for the fact that the savings banks as a class have put in force a rule requiring notice for the withdrawal of deposits, there would have been an even larger buying demand from small investors. Another circumstance which was regarded with great satisfaction by the street was that buying of copper metal has at last made its appearance on a large scale, and whether this is a speculative or a consumptive demand seems to make little difference from a Wall street standpoint. The effect of the movement was at once shown by the greater firmness in Amalgamated Copper and the other copper stocks. The United States Steel Corporation's report for the September quarter was also favorably received, although the decrease of a million and a half tons of orders on hand on September 30 tended to confirm the already prevalent impressions about the recession in the steel and iron business. More or less interest was also taken in the Pennsylvania Railroad dividend, which, in spite of reports that a reduction might be made, was duly announced on Friday at the regular rate of 3½ per cent. for the half year. At the same time, the officials of that company announce that expenditures for improvements will be reduced to a minimum for the time being. On Friday the market was irregular, and prices inclined to recede on the sharp advance in foreign exchange rates.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,739,836	2,895,020	1,041,696
August 8	3,272,993	2,262,961	865,002
August 15	2,947,433	2,827,954	1,068,519
August 22	3,565,347	3,196,375	1,170,340
August 29	3,808,866	5,081,999	1,429,250
September 5	2,923,710	2,466,032	1,194,215
September 12	5,291,866	4,953,216	1,682,404
September 19	4,340,854	4,677,522	2,178,428
September 26	4,876,737	4,574,653	2,064,932
October 3	4,731,950	4,917,021	1,072,642
October 10	5,295,292	3,257,886	2,774,462
October 17	4,964,062	4,931,841	2,831,482
October 24	4,765,589	5,188,817	4,267,109
October 31	4,792,349	4,492,974	6,283,399
Largest exports in 1907, week ending Oct. 10			5,295,292
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Corn Exports, in Bushels.

[Special to BRADSTREET'S.]

Week ending	1907	1906	1905
July 4	1,410,804	691,600	932,225

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Oct. 25, 1907	Oct. 18, 1907	Oct. 26, 1906
American	2,206,839	2,000,951	2,250,298
Other kinds	780,876	787,876	750,000
Total	2,987,715	2,788,827	3,000,298

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Oct. 25, 1907	Oct. 18, 1907	Oct. 26, 1906
Great Britain and continent	1,514,000	1,528,000	1,313,000
Egypt	104,000	81,000	106,000
India	327,000	340,000	390,000
United States	1,043,000	840,000	1,191,000
Total	2,988,000	2,789,000	3,000,000

New York's Foreign Trade.

IMPORTS.

	1907	1906
Dry goods	$3,157,450	$2,982,859
General merchandise	11,631,380	12,206,044
Total week ending October 19	14,788,830	15,188,903
Previously reported	791,660,182	596,269,113
Since January 1	806,449,012	611,458,016

EXPORTS.

	1907	1906
Week ending October 26	$13,136,786	$12,608,472
Previously reported	510,014,582	501,611,914
Total	523,151,368	514,220,386

Boston Shoe and Leather Market.

Buying of leather is along very conservative lines. Light and middleweight sole leathers are more active and overweights are sold practically up to receipts. Market is strong and dealers are holding their prices firmly. Sole cutters are reporting fair orders. Satin and glove grain are not accumulating on the average. There is some export demand. Dealers are not able to deliver finished calf and veal skins as fast as factories are calling for them, particularly the extreme weights. Hides are quiet. Ohio buffs are quoted in Boston at 10¼ cents, or about the same as last week. Shoe manufacturers are receiving few large orders but many urgent ones. Wholesalers want the goods to apply to current orders, indicating that stocks on their hands are decidedly light, in many cases hardly sufficient to keep pace with orders in hand. Shipments are showing up better, but still fall behind last year. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 98,264 cases; preceding week, 92,603; last year, 108,698; total for 1907, 4,045,992; total for 1906, 4,285,560; decrease, 239,568.

Wool Markets.

Clothing wools have been in better demand during the past week, this being mainly due to the small stocks of worsted wools and to the increased demand for goods made from this class. There is a steady demand for all grades, prices are very well sustained, and the trade is in very good condition, the clip being better cleaned up than last year, so that there will be no need to sacrifice any holdings to reduce stocks. The market is rather quiet, owing to the small movement in worsted wools, but there is a steady volume of business being transacted. The urgency shown by buyers for immediate shipment is a feature which tends to show the small stocks held by the mills. Montana fine clothing wools sold during the week at 22½@23½ cents, Idaho and Wyoming fine clothing at 21@22 cents, and Utah and Nevada fine medium clothing at 21@22½ cents. Fleece wools have been rather quiet owing to the small offerings of washed and unwashed delaines, half and three-eighths bloods being well sold up. Quarter blood fleeces have been in larger demand, as they are cheaper than anything of that class which can be imported, and prices are very strong. Ohio quarter blood fleeces sold at 30½@31 cents,

with Michigan quarters at 30@30½ cents. Fine washed Ohio XX sold at 34@35 cents, fine unwashed at 27@28 cents, and unmerchantable at 29@30 cents. Fine washed delaine fleeces are in short supply and very firm, sales having been made at 38½@39 cents, with unwashed and unmerchantable delaine at 31@33 cents. Spring Texas wool is very quiet, eight and twelve months being about out of stock, twelve months being nominal at 26@27 cents, and eight months at 21@23 cents. Fall Texas wool is being shorn, most of it being consigned to the east, the value in Boston being about 22@23 cents, the wool being fairly light, but not of very long staple. California wools are quiet, with an increased demand for sample bags. Northern spring wools are quoted at 26½@27½ cents and middle counties at 20@22 cents. Oregon wools are well sold up. Scoured territories have moved fairly well at 67@68 cents for fine and 63@65 cents for fine medium. Pulled wools continue in good demand at about previous prices. All foreign markets, especially in Australia, are very strong. The Geelong sales opened October 24, including very little wool suitable for this country. Very high prices are being maintained at Melbourne, with little being done by American dealers, though a few American mills have bought. Domestic wools are lower than similar foreign grades can be imported for this year, so that there is no speculative buying of foreign wools at the high prices being paid by the French and German buyers. The Adelaide market closed very strong, wools with a shrinkage of 51@52 per cent., 60 to 64s, selling at 13@13½d, the cost in Boston being 85 cents. The Sydney market is also very strong.

PRODUCTION OF COKE IN 1906.

The total production of coke from the beehive and by-product ovens of the United States in 1906 amounted to 36,401,217 short tons, against 32,231,129 short tons in 1905, an increase in 1906 of 4,170,088 short tons, or 12.94 per cent., surpassing all previous records in the history of coke making in the United States.

Of the total output 31,843,090 short tons were produced in beehive ovens, against 28,768,781 short tons in 1905. The production from retort or by-product ovens in 1906 was 4,588,127 short tons, against 3,462,348 tons in 1905, the increase in the production of beehive coke being 3,074,309 tons, while the increase in the retort-oven product was 1,095,779 short tons. It thus appears that while the total production from retort ovens in 1906 was only about 12 per cent. of the total output, more than 25 per cent. of the total increase was in by-product coke.

The value of the total coke product in 1906 increased in even greater proportion than the tonnage, from $72,476,196 in 1905 to $91,608,034 in 1906, a gain of $19,131,838, or 26 per cent., as compared with an increase of 12.94 per cent. in quantity. The value of the product in 1906 was nearly double that of 1904, when the production amounted to 23,661,106 short tons, compared with which the production in 1906 shows an increase of 12,740,111 tons, a little over 50 per cent.

The increased production in 1906 and the larger proportionate increase in value were due primarily to the continued extraordinary demand created by the unchecked expansion in the production of iron and steel, and also, in a minor degree, to the shortage in anthracite fuel occasioned by the suspension of the operations in the spring of the year and to similar shortages in some of the bituminous coal-producing states.

The average price obtained for coke in 1906 was $2.52, as against $2.25 in 1905, and was the highest figure reached in a period of twenty-seven years with the exception of 1903, when, because of the fuel famine caused by the strikes of 1902, the average price of coke was advanced to $2 63.

In considering the total value and the average selling price of the coke produced in the United States, it should be remembered that many of the values are fixed arbitrarily. Many of the coke ovens in this country are operated by large corporations which operate also coal mines and blast furnaces, the coke-making being really only an incidental part of the business. Some of these companies charge the coke product against the furnace department, sometimes at cost, sometimes at a figure based upon the cost of coal mining and coke making plus a percentage of profit on these operations. The value is not fixed by the market price. By other companies the value is estimated upon the average prices for coke of similar quality produced and sold in the immediate vicinity.

The quantity of coal used in the manufacture of coke in 1906 was 55,746,374 short tons, valued at $62,232,524. The value of the coke produced from this coal was $91,608,034, leaving a difference of $29,375,510 to cover the expenses of manufacture and administration and the profits. In 1905 the value of the coal used was $50,614,674, and the value of the coke produced was $72,476,196, a difference of $21,861,522.

RAILWAY EARNINGS AND EXPENSES.

"Appearances of prosperity are deceptive sometimes," says the *Railway Age*. "The public has seen the railways carrying more passengers and hauling more and bigger cars of freight during the last year than ever before, while the published statements of gross earnings have shown large increases, and the assumption has followed that the railway business now is immensely profitable; also that rates are too high and must be further reduced. The steady upward movement in the cost of railway operation has been ignored or discredited. But the returns that show expenses as well as earnings are now coming in for the year ended June 30, 1907, and they tell a serious story. Taking the annual reports of thirty companies already at hand, we compile the following table, showing only the increase or decrease in gross earnings, operating expenses and net earnings, compared with the year ended June 30, 1906. All the figures represent increases unless the contrary is indicated:

Roads	*Inc., gross earnings*	*Inc., oper. expenses*	*Inc., net earnings*
Atch., Topeka & Santa Fe.	$12,882,396	$8,859,415	$4,022,981

N. Y., N. H. & Hartford..	2,617,614	2,627,495	*9,881
Chicago & Eastern Illinois.	1,409,151	661,020	748,031
Total	108,759,930	90,801,259	17,958,671

* Decrease.

"These figures speak for themselves to the thoughtful reader. They show that on twenty-five of the roads the increase of expenses has been greater—in most cases far greater—than the increase in net earnings, and that eleven of them show actual decreases of net earnings, in spite of remarkable increases in gross earnings. Aggregated, it appears that a gain of $108,000,000 in business was nearly absorbed by an increase of $90,000,000 in the cost of handling it, leaving less than $18,000,000, or 16½ per cent. of the gain in gross, to apply on increased investments in improvements. The legislative rate cutting of last winter had only barely begun to be felt in the period covered by these figures. With rates still lower and expenses still higher what will be the results during the current year?"

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 9, 1907.

A dispatch from Washington at the end of last week announced that considerable pressure had been brought to bear upon the President to call an extra session of Congress to deal with the financial situation and with his own suggestions upon the subject of corporate control. It was learned later, however, that before the dispatch in question was sent from the capital the question of calling an extra session had been the subject of discussion at a Cabinet meeting, at which a decision adverse to the proposition had been reached. That conclusion must be regarded as entirely sound. The business of curing defects in the currency system is one that should be entered upon not hastily but with deliberation. It is proverbial that hard cases make bad law, and there is danger that legislation pushed through under the pressure of an existing exigency might embody provisions that would not commend themselves to sober second thought. The country and its legislators will be in a far better frame of mind to deal with the subject of currency reform when Congress is in shape to take it up in the regular order than either would be to-day.

The difference between the present financial situation and the state of affairs which existed in other years of stress seems to be from the stock market's point of view very radical. While several trust companies have been forced to close, or subjected to runs, with an accompanying closing up of smaller banking institutions and currency scarcity, it is very noticeable that the stock market itself has been comparatively free from actual disasters. The failure of the Heinze firm and of a couple of other concerns seems, in fact, to have been due to transactions outside of the customary financial bounds. There is, of course, no question about the extending of substantial assistance to various other Wall street interests which had unduly large commitments of a speculative character. Still, the fact that failures of members of the New York Stock Exchange, or of the stock exchanges at Boston, Chicago, Philadelphia and other leading cities, have been few and, on the whole, unimportant, puts a different aspect upon the position from that which ordinarily obtains at times of financial stress. A circumstance which has doubtless had a great deal of effect in this direction is that the heavy declines in stock prices since January 1, and the successive sharp spells of liquidation which occurred in March, in August and in the early days of October, had eliminated in a large degree the weak speculative accounts which grew up during the preceding period of inflation in values.

Owing, possibly, to the fact that the pamphlet which was sent out with Secretary Straus' invitations to the conference of representatives of commercial organizations in December was prepared by the tariff expert of the Department of Commerce and Labor, the impression seems to have been produced in some quarters that the tariff and reciprocity would be among the subjects of discussion at the meeting. The Secretary wishes to have it understood that the conference has been called not with the view of discussing the tariff but simply for the purpose of devising means for rendering the department of greater service to the commercial interests of the country, and at the same time of enlisting the coöperation of those interests in the work which the department is endeavoring to do. Much information of value is now being gathered by the department. It is hoped that the commercial organizations will aid in disseminating this information, and also in suggesting directions in which the service now done may be bettered to the advantage of the country's trade.

Reminiscences of local history, coupled with reflections upon the development of our national fiscal system and upon New York's share therein, are evoked by the news that the custom house organization of that port has removed from its old quarters, on Wall street, to its new building, facing Bowling Green. Upon a location fixed upon as a site for the first fort in the harbor, subsequently identified with the residence of Washington, Clinton and Jay, and later the site for sixteen years of an early custom house of the port, the government has erected a commodious modern edifice, fit to house the administrative force of a service which collects two-thirds of the customs receipts of the government. How greatly the customs branch of the government's fiscal system has grown in the last hundred years or so is shown by the fact that the customs collections at the port of New York during the last fiscal year were more than twenty-four times as large in amount as those for the country as a whole in 1800. The annals of the customs service at the port bristle with the names of men distinguished in the annals of the state and the city. It is significant, perhaps, of the temper of the place and of the time, that the removal from the old building to the new one was effected between Saturday and Monday, and without any ceremony to mark the passing of a great branch of the executive government from a building which it had occupied for nearly four decades and a half.

On Saturday last the tariff commissions of the French Senate and Chamber of Deputies, which have been preparing a bill for the revision of the tariff of 1892, formally requested the government to agree not to conclude further commercial treaties until the chambers shall have acted on the bill drafted by the commissions. It is said that the Cabinet, represented at a conference with the commissions by the Premier, the Minister of Foreign Affairs and other members, in effect acceded to this request, with the proviso, however, that the recently negotiated treaty with Canada be ratified. This arrangement is interpreted as practically involving the suspension of all tariff negotiations with other countries until after the revision of the French tariff. The plan of revision proposed contemplates an extension of the double system of rates to all schedules, making the lowest maximum rates 50 per cent. higher than the minimum rates and restricting the grant of minimum rates to countries granting equal concessions to France, with possibly the raising of the minimum rates in some schedules. Under the circumstances the prospects for a favorable conclusion of the tariff negotiations between France and the United States would seem to be remote.

A warning note has been sounded by Government Forester Pinchot, regarding the imperative need of conserving the timber supply of the United States. After a six months' trip of inspection, in which he has covered five thousand miles, he declares that at the present rate of cutting the timber supply of this country on government reserves and private holdings will be exhausted in twenty years, though it is possible that the growth of that period may delay the arrival of the exhaustion another five years. Mr. Pinchot says that the people of the United States use more timber than those of any other country. About one-fifth of the forest area of the country is now in government reserves, but this does not mean that the government controls one-fifth of the timber supply, for the reason that privately owned timber lands are, as a rule, in better condition than the government reserves. The Forestry Service will ask for money and authority to extend the service, and will make all haste with the work of reforesting the denuded timber lands, but it is beyond the power of the service to prevent serious trouble by its own efforts alone, so Mr. Pinchot urges the importance of state and private coöperation with the national government in this work. The country has not, in truth, learned as yet to be economical in the use of its resources, and it is well that the often repeated warning as to the disappearance of its timber supply should be raised again, and in the emphatic form in which Mr. Pinchot has couched it.

After a long session in conference at Atlanta., Ga., last week, the governors of Georgia, Alabama and North Carolina issued a statement in which they declared that they had arranged to coöperate in the investigation of facts and law connected with the duties of their states to the public and to transportation companies, and to coöperate with other states having the same problems. They declared, however, that they regarded the complete recognition of the right of the states to regulate the interstate business of tranportation companies as absolutely necessary, and further, that no injury had been done to any corporation in any of their states by the exercise of the power of regulation. This latter declaration was at once controverted in a statement issued by the president of one of the roads affected. The governors said in their statement that they did not consider it desirable to make public the details of their conference at the time, so that nothing is definitely known as to their decision on the concrete matters which it is known were presented to them. Less has, therefore, come of the conference than the earlier statements led people generally to expect.

It was announced at Christiania, the capital of Norway, on Saturday last, that after negotiations lasting about a year, a treaty had been signed on that day by representatives of Norway, France, Great Britain, Germany and Russia, guaranteeing the territorial integrity of Norway. At the same time a declaration was signed dissolving the treaty of 1885, under which Great Britain and France guaranteed the integrity of Norway and Sweden as against Russia. The signing of the first-mentioned convention has been the subject of much discussion in Sweden, where, though it is admitted to be the concern of Norway, it is regarded with much dissatisfaction, as being aimed, at least indirectly, against Sweden, and as constituting a serious obstacle to the improvement of the relations between the two nations of the Scandinavian peninsula.

THE WORK OF REHABILITATION.

Affairs financial have moved quite rapidly this week, but the trend has very generally been in the direction of improvement. At the close of last week there was considerable nervousness regarding the position of several trust companies, notably the Trust Company of America and the Lincoln Trust Company, against which runs had been very severe. The bank statement on Saturday, showing the largest deficit in legal reserve ever reported by the New York banks, due to heavily increased loans and large losses in cash, also made for a depressed feeling in the financial district. Even though the report was held till after the Stock Exchange had closed, the sentimental effect of the expected bad showing was reflected in a weak closing on Saturday, and stocks were offered on the curb one-half to one point below the last official prices. In addition, the scarcity of currency at a time when large weekly and monthly pay roll periods were due had a depressing effect, and high premiums were bid for small bills. The fact that the leading financiers of the city were in conference all Sunday and until early on Monday was additionally disturbing, and, coupled with the advance of the Bank of England rate to 6 per cent. at London, made for a weak opening for prices at New York on Monday.

Support was, however, forthcoming from banking interests, and later came the announcements that the trust company situation would be taken care of, that large loans on Tennessee Coal & Iron stock long overhanging the market had been taken over, and that control of the southern concern had passed to the United States Steel Corporation, the 5 per cent. sinking fund bonds of the latter concern to be exchanged for the stock of the Tennessee Coal & Iron Company. On Wednesday the arrival of the first of the heavy gold engagements was a very satisfactory feature and made for a stronger market all around, despite reports of the appointment of a receiver for a large Massachusetts cotton printing concern. The market inclined to ease on Thursday on a further advance of the Bank of England rate from 6 to 7 per cent., the second advance of the week and the highest rate reached since October, 1873, this being construed to mean that London was disposed to protect itself against a further drain of gold, the engagements of which to date were $40,000,000. Throughout the week, however, the feeling as a whole was better, it was felt that some extremely troublesome, if not indeed exceedingly dangerous, elements had been removed, and the disposition was to believe that the work of rehabilitation was going forward under the same able and courageous leadership toward a permanently better and sounder condition of affairs. Following will be found a continuation of the diary of events in a financial way, bringing the record down to date:

November 2.—Currency scarcity complained of. Premiums of 2 to 3 per cent. charged. Use of checks in pay rolls. Call money 75@3 per cent. No time offerings. Commercial paper market at standstill. Sterling exchange rises to export point, but more gold is engaged. Amount engaged so far $30,000,000. Bank statement shows record deficit of $38,838,825 in surplus reserves. Loans increase $60,741,000; cash decreases $30,601,800. Percentage of reserve 21.30. Stock market eases slightly. Copper metal stocks declined 28,000,000 pounds in October.

November 4.—Stock market weak early on rumors and rise of Bank of England rate to 6 per cent., but rises sharply on reports that at a Sunday session of bankers the United States Steel Corporation takes over Tennessee Coal & Iron stock hypothecated for loans with trust companies. Agreement of banks and trust companies to support Trust Company of America and Lincoln Trust Company. Reports from Washington that administration will modify its attitude toward corporations. Gold engagements abroad continue. Secretary Cortelyou announces that he will lend aid to movement of crops. Checks in general use in Pittsburgh. As high as 4 per cent. premium paid for currency. Several banks arrange to print checks of small denomination for use in pay rolls. Call loans 25@4; prevailing rate 20 per cent. Foreign stock markets all weak on rise in bank rate and New York rumors. German bank statement shows large loss in cash and heavy increase in loans.

November 5.—Holiday [Election]. Bank of France agrees to ship $15,000,000 gold to London. Berlin also ships some to London.

November 6.—United States Steel directors ratify Tennessee Coal & Iron deal. Arrivals of gold help stocks early, but prices react later on realizing. Small failure in Hamburg. Receiver appointed for large cotton printing works. Stock of Trust Company of America and Lincoln Trust Company put in hands of trustees. President Oakleigh Thorne reports his company has paid out $34,000,000. Agricultural implement manufacturers in session at Chicago decide to shorten terms of payment on sales. Large shipments of currency to northwest by New York banks. First gold arrival $7,100,000. New Orleans banks issue asset currency. New York stock market advances. Premium on currency declines slightly, from 3¾ to 3¼ per cent. State bank examiner reports Twelfth Ward Bank (New York City) in good shape. Pig-iron prices reduced at Pittsburgh.

November 7.—Bank of England advances discount rate to 7 per cent., highest rate since October, 1873. Bank of France advances its discount rate from 3½ to 4 per cent. Bank of Belgium also advances rate, as do the banks of British India. Atchison Railway fined $330,000 for rebating. Chicago banks announce they will issue Clearing House checks in small denominations. Los Angeles banks decide to issue scrip in small denominations. Stock market weak on liquidation from London, Canadian Pacific and Atchison especially, and suspension of American Cotton Oil common stock dividend Dealings very much restricted. Membership on Stock Exchange sells at $60,000, lowest price since 1904. Call money rates 20@6; prevailing rate 20 per cent. Time money scarce. Gold engagements on this movement to date $40,000,000, one-fourth of which has arrived. Listing of $30,000,000 United States 5 per cent. sinking fund bonds on Exchange applied for.

November 8.—Bank of Germany advances rate to 7½ per cent. Break in United States Steel 5 per cent. bonds to 80 on liquidation by exchanging holders of Tennessee Coal & Iron stock. North American directors fail to act on dividend. Gold received per steamship Lusitania $12,000,000. Total engagements to date $44,875,000, of which $21,300,000 received. Banks lose through interior and Treasury demands, $11,000,000. Stock market, strong in the morning, was irregularly heavy in the afternoon. Money on call, 20@3 per cent.; prevailing rate, 15 per cent.; renewals, 15 per cent. Time rate, 12 per cent. for ninety days; year money, 6½ per cent. Owing to arrival of gold from Europe, Chicago banks decide to postpone use of emergency currency. Wheat breaks 2 cents. Week's wheat exports (BRADSTREET'S statement) largest of the year. Cotton breaks and recovers. Borough Bank Brooklyn) declared solvent.

OCTOBER FAILURES AND LIABILITIES.

There were 964 failures or suspensions reported to BRADSTREET'S for the month of October, with aggregate liabilities of $139,180,481 and assets of $124,305,825. This is the largest number of failures reported since January, 1907, and the largest number of failures reported in October for ten years past. These figures, as well as the unprecedented liabilities reported for the month, are the result largely of financial disturbances which culminated in the runs upon and suspensions of several trust companies and banks at New York City. Thus of the 964 failures with liabilities of $139,180,481, twenty financial institutions account for $114,000,000, leaving for the remaining 944 commercial suspensions the comparatively moderate total of $25,000,000 in liabilities. This latter total has been several times exceeded in October in past years, and surpassed in other months in other years of stress. It is, in fact, worth recording as a historical fact that four-fifths of the entire country's liabilities in October were furnished by New York City, and three-fifths of all liabilities were accounted for by suspending trust companies. It should also be noted that some of the suspending banks and trust companies have resumed, the absolute insolvency of some others is not alleged, and that most of them will eventually resume seems probable. Following are found the failures, assets and liabilities in October for fifteen years past:

	Number	*Assets*	*Liabilities*
1907	964	$124,305,825	$139,180,481
1906	797	6,842,982	12,224,518
1905	810	6,325,372	12,833,779
1904	841	4,736,190	10,323,006
1903	910	25,176,067	34,499,716
1902	801	4,453,040	8,961,154
1901	895	4,236,040	9,501,634
1900	885	4,125,336	9,620,855
1899	823	2,689,473	6,713,769
1898	1,035	8,431,528	14,809,391
1897	1,011	5,841,877	10,598,739
1896	1,234	9,360,131	16,245,082
1895	1,320	10,051,682	19,093,873
1894	1,146	7,935,646	14,716,881
1893	1,753	36,119,509	54,948,748

The failures, assets and liabilities monthly and quarterly since January 1 follow:

	Number	*Assets*	*Liabilities*
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,601	9,888,052
May	755	5,290,090	10,546,963
June	675	10,869,132	17,706,398
Second quarter	2,163	21,785,823	38,141,413
Six months	4,791	41,993,823	76,546,299
July	733	8,716,782	13,031,290
August	673	5,014,826	9,375,992
September	694	5,580,098	11,384,483
Third quarter	2,100	19,311,706	34,691,765
Nine months	6,891	61,305,529	111,238,064
October	964	124,305,825	139,180,481

The number of failures in October, it will be seen, was 20.9 per cent. larger than in October, 1906, and the heaviest reported in October since 1898. In number also October exceeded September by 38 per cent.

The detailed table of failures by groups of states shows that there were fewer failures in the northwest and in the territories, the largest increases in number being in New England and the middle states.

Canadian failures for October numbered 148, with liabilities of $1,404,111, increases of respectively 52 and 108 per cent. as compared with October a year ago.

October	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1906
New England	140	$1,561,993	$2,293,842	97	$394,970	$882,583

RESULTS OF THE ELECTIONS.

The elections held on Tuesday last were not determined by the popular judgment on any general issue. There was no choice of presidential electors, nor even of congressmen, such as would give unity and coherence to a campaign throughout the country, and in many of the more important states candidates for the governorship were not voted for. In other words, the year is what is known as an off year politically, and the elections were determined to a very large degree by local conditions. Under the circumstances it is not very easy to generalize about the results, though, as may be seen from a glance at some current comment, the fact that 1907 is a year immediately preceding one in which a presidential campaign is to be fought out has furnished a temptation to such generalization.

Leaving aside the vote on state judgeships in New York, where the leading parties united on nominees, and the remarkable plurality for the state treasurership in Pennsylvania, the largest plurality secured by any candidate was that given to Governor Guild, who ran for reëlection in Massachusetts, namely, over 104,000. This was the heaviest plurality received by any candidate in that state since 1898, but was secured on a lighter total vote than that polled two years ago, owing to the fact that the opposition was divided between three candidates. Apart from the heavy plurality for Guild, the features of the election were the heavy vote polled for the Independence League candidate and the poor showing made by the regular Democratic nominee. Another noteworthy outcome of the election was the choice of a Republican governor in Kentucky by a plurality of about 14,000. The political complexion of the state has changed once again, for it gave Democratic pluralities in the last two presidential elections and at the last election for the governorship, though it departed from its traditional attitude in 1896 and 1899. A Democratic governor has been elected in Maryland by a reduced plurality, as compared with that of four years ago, though it represents a gain for the Democrats, as compared with 1904, when the Republican candidate for President carried it by an extremely narrow margin. In Rhode Island Governor Higgins has increased his plurality of last year. New Jersey still remains in the Republican column, where it was placed in 1906, though the plurality for Governor Fort is smaller than any of those given for his party in recent years. Nebraska shows a continued Republican plurality in the vote for a Supreme Court judge. In Delaware the vote cast on the question of license or prohibition indicates a small majority for the former, the actual result being that in two districts license will prevail and in two prohibition, the former, however, having the greater population.

Some points of interest are presented by the results of the local elections. In New

York there was no contest over state officials between the two leading parties, who supported the same candidates for the Court of Appeals judgeships. In the city there was no mayoralty contest, the struggle being over county officials. In Manhattan the successful candidate for sheriff, running on the Tammany ticket, secured a plurality of less than 27,000 over the candidate for the same office on the Fusion ticket, representing a union of the Republican party and the Independence League. The plurality is small compared with some of those of former years, but the showing of the opposition was weak when it is considered that a couple of years ago the candidate of the League made so strong a run for the mayoralty. In Kings county the local Democratic ticket was defeated, with the exception of one man, who showed great popular strength, and another who had a very slender margin. The results here indicate that while there has been considerable loosening of party ties—something in the nature of a disintegration, in fact—the elements of discontent have not yet found expression in an effective organization that has in it the element of endurance. Cincinnati has this year returned a Republican mayor over the present holder of the office, who was elected by a fusion movement two years ago. In Cleveland Congressman Burton was defeated by Mayor Johnson, who was elected for the fourth time, a striking illustration of the persistence of personal influence under special conditions. In Jersey City Mayor Fagan, who was also running for the fourth time, was defeated by a large plurality. In Salt Lake City the American party candidate for mayor won over his Republican and Democratic competitors. One of the most interesting outcomes of Tuesday's work at the polls was the election of Dr. Taylor as mayor of San Francisco on the Good Government ticket over the Union Labor candidate. Taking the results as a whole, they appear to indicate a noteworthy mobility among the electorate, though the continuing influence of long established organizations is a factor that cannot be put out of sight by the unprejudiced observer.

OCTOBER BANK CLEARINGS.

Despite the unsettlement pervading financial affairs in the month of October, it is worth recording that clearings both at New York and at the cities outside thereof, taken as a whole, gained heavily over those recorded in September, and, furthermore, that the clearings outside of the metropolis were larger in October than in any preceding month in the country's history. The aggregate of the country's clearings in October was larger than in any preceding month since March, and only two months of 1907, in fact, show a larger total than for the month recently ending.

Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328

Sept	6,030	8,314	6,859	6,804	4,418	4,099	3,944	3,300
Oct	8,196	9,344	8,026	7,496	5,413	5,069	4,512	3,799
Nov	....	8,607	8,542	6,539	....	4,917	4,514	3,495
Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

The total clearings at ninety-four cities for October aggregated $13,609,068,695, a gain of 30.2 per cent. over those of September, and a decrease of only 5.5 per cent. from October a year ago, as against a decrease of 15.8 per cent. in September. Of the grand total New York City furnished clearings to the value of $8,196,003,640, a gain of 35.6 per cent. over September, and a decrease of 12.2 per cent. from October, 1906, as against a decrease of 27.4 per cent. in September. The country outside of New York—ninety-three cities reporting—furnished a total of $5,413,065,055, an aggregate 22.4 per cent. larger than that of September, and 6.7 per cent. in excess of October, 1906.

Following are the gains or losses by groups, in percentages, shown in October and the ten months, as compared with the same periods a year ago:

	October		Ten months	
New England	Decrease	8.0	Increase	3.2
Middle	Decrease	11.0	Decrease	10.8
Western	Increase	7.5	Increase	10.8
Northwestern	Increase	18.4	Increase	16.8
Southwestern	Increase	20.9	Increase	17.1
Southern	Increase	3.4	Increase	5.3
Far-western	Increase	5.6	Increase	19.3
Total, United States	Decrease	5.5	Decrease	4.7
New York City	Decrease	12.2	Decrease	12.1
Outside New York	Increase	6.7	Increase	9.6
Canadian	Increase	2.0	Increase	9.4

For ten months of the calendar year the clearings at ninety-four cities aggregate $124,904,240,736, a total 4.7 per cent. smaller than that of 1906. New York City furnished $76,331,499,265 of this total, a decrease of 12.1 per cent. from 1906, while the ninety-three cities outside of New York accounted for $48,572,741,471, an increase of 9.6 per cent. over 1906, and to this extent the largest clearings ever reported.

Canadian clearings for October aggregated $391,418,806, a gain of 2 per cent. over October, 1906, while for ten months the aggregate is $3,465,958,734, a gain of 9.4 per cent. over 1906.

BANK CLEARINGS AT 117 CITIES FOR OCTOBER AND TEN MONTHS, 1907 AND 1906.

UNITED STATES STEEL ACQUIRES TENNESSEE COAL.

One of the most important and effective of the steps which were taken by the financiers who have bent their efforts to remedy the financial situation at New York during the past few weeks relates to the disposal of the large loans based upon stock of the Tennessee Coal & Iron Company and the accompanying transfer of control of that organization to the United States Steel Corporation. It was fully recognized that the loans contracted by a group of Stock Exchange operators, who two years ago acquired something like 80 per cent. of the Tennessee Coal stock, and who were credited with the intention of amalgamating it with the Republic Iron & Steel Company, which they also controlled, formed one of the danger points in the financial situation at New York. In fact, it was loans of this character which were claimed to have much to do with the troubles of two trust companies which have been much in the public eye of late, while other institutions are believed to have made similar commitments

which under existing conditions were, to say the least, troublesome. While the nominal quotations for the stock of the company have been maintained for months past at or about 135, it was generally believed that the marketing of its holdings carried in the before-mentioned loans, if it were attempted to liquidate the same, would have resulted in a disastrous crash, not only in the price of the stock but in the general market, and would have added greatly to the danger of a complete disorganization in Wall street.

The solution of this matter was not an easy task. In fact, it occupied a good deal of the time of the assembled financiers under the lead of Mr. J. P. Morgan, who were in almost continuous session at the beginning of the week. The final conclusion was that a majority of the stock of the Tennessee Coal, constituting the bulk of the shares held in the loans already referred to, should be acquired by the United States Steel Corporation, and last Wednesday brought formal announcement to that effect, the terms agreed on being that United States Steel second sinking fund 5 per cent. bonds should be given at 84 — their then market price — for the stock held in the loans, and that for fourteen days minority holders of the stock should have the privilege of exchanging their stock for United States Steel bonds on the same basis. Under this arrangement the holder of 100 shares of the stock, the par value of which is $10,000, would receive approximately $11,900 of the bonds, and it is understood that all but a small proportion of the $33,000,000 of stock will be exchanged. Before the details were settled upon, the chairman of the United States Steel Corporation, Judge Gary, and one of the leading directors, Mr. H. C. Frick, visited Washington, their purpose, it is assumed, in conferring with President Roosevelt, being to assure their associates and the other interests involved that the deal would not be regarded by the administration as being in contravention or defiance of the anti-trust law. It is assumed, at any rate, that the answer in this respect was satisfactory, and formal announcement that the plan had been consummated made its appearance.

This transaction is properly regarded as of great significance. The money and stock markets are relieved from the weight of apprehension due to a possible liquidation by the Tennessee Coal pool. The members of the latter obtain for this stock a security which is readily available as collateral for their loans. Finally, the United States Steel Corporation absorbs, at what is looked on as a highly reasonable price, a competitor whose strength was increasing steadily, and whose facilities in certain lines, more especially in the manufacture of open-hearth steel rails, can be turned to very profitable account.

A HEAVY INCREASE IN CIRCULATION.

A remarkable increase in circulation is recorded for the month of October, the figure for the total volume outstanding on November 1 being $70,500,000 in excess of that on the first of the preceding month. The most noteworthy increase was one of over $37,000,000 in gold certificates. Other increases were over $12,500,000 in gold coin, over $10,800,000 in national bank notes, over $4,000,000 in standard silver dollars, over $3,500,000 in silver certificates, and over $2,400,000 in subsidiary silver. There was a small increase—only about $128,000—in United States notes, and there was only one item showing a decrease, namely, Treasury notes of 1890, which showed a total about $98,400 less than on October 1.

The general stock of money coined or issued, the amount held in the Treasury as assets of the government, and the money in circulation on November 1 are set forth in detail in the following table:

	General stock of money	*Held in Treasury*	*Money in circulation*
Gold coin, including bullion in Treasury	$1,489,742,845	$166,645,890	$574,459,086
Gold certificates	....	71,341,960	677,295,909
Standard silver dollars	562,636,982	2,287,023	88,822,959
Silver certificates	....	7,177,432	464,349,568
Subsidiary silver	134,122,602	6,661,373	127,461,229
Treasury notes of 1890	5,613,000	11,074	5,601,926
United States notes	346,681,016	3,426,863	343,254,153
National bank notes	609,980,466	14,856,630	595,123,866
Total	3,148,776,911	272,408,215	2,876,368,696

A glance at the figures given in the statement issued by the Treasury Department indicates that the officials have not revised the statistics of circulation for the corresponding time last year, so that comparisons between the two sets of figures cannot be readily made. For example, the total amount of money in circulation on November 1, 1906, is given at $2,866,882,786. Comparing that total with those for the first of the present month and the first of last month we get the peculiar result that while the total volume of circulation increased over $70,000,000 during the last month, it increased only by a little over $9,400,000 during the year since November 1, 1906. This conclusion, of course, is wide of the facts, as is the further apparent showing that the gold at present in circulation is less by over $113,000,000 than that outstanding at this time a year ago. These apparent showings are only rendered possible by the maintenance in the table of comparisons of the unrevised figures as to the amount of gold coin in circulation which were given out last year before the revised estimate as to the stock of gold coin was prepared by the Director of the Mint. If the amount of gold coin believed by that officer to be erroneously included in the former estimates be deducted from the total given on November 1 last year, we would have instead of a decrease of $113,000,000 in that item an increase of over $21,700,000, while instead of an increase of only about $9,400,000 in the total volume of circulation we would have one of over $144,400,000.

Leaving gold coin aside for the moment, we find that the heaviest gain for the year was one of over $101,300,000 in gold certificates. There were also increases of over $20,600,000 in national bank notes, of over $7,100,000 in subsidiary silver, and over $5,200,000 in standard silver dollars. There were decreases of over $9,100,000 in silver certificates, of over $1,200,000 in Treasury notes of 1890, and of not far from the same amount in United States notes. It may be mentioned in leaving the subject that the retention of the unrevised figures for last year warps the comparisons in another particular, namely, as regards the circulation per capita. The circulation per head of population, based upon an estimate of 86,547,000 inhabitants, is put by the Treasury statement at $33.23 for November 1. This represents an increase of 77 cents for the month, but a decrease of 45 cents as compared with the corresponding date last year. As a matter of fact, on the basis of the revised estimate as to gold stocks, the per capita circulation calculated at this time last year should be lowered, in which event it would appear that instead of there having been a decrease in the amount it would be found to have increased by something like $1.14.

WHEAT STOCKS STILL SMALLER THAN A YEAR AGO.

Visible wheat supplies in the United States and Canada made an irregular showing during October, the stocks in the former country decreasing again, as in September, while, on the other hand, those in Canada increased twice as much as those in this country fell off, the net result being a gain of 3,835,000 bushels in the aggregate stock held in America as a whole. A year ago an increase of more than double this gain occurred in the same positions. The revised figures for Europe are not yet at hand, but the preliminary European totals as of date of November 5 show a gain of 6,600,000 bushels in European stocks, and the gain in the entire world's supply on November 1, as compared with October 1, is 10,500,000 bushels. Inasmuch as the stocks in the United States and Canada gained more rapidly last year than this year in October, the total stock in the United States and Canada is now 6,312,000 bushels smaller than on November 1 a year ago, and the European stock is 12,300,000 bushels smaller than on October 1, the net result being that the world's stock is 18,600,000 bushels smaller than on November 1, 1906, though 10,400,000 bushels larger than on November 1, 1905.

The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on November 1, 1907, compare with the same period of the four preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
November 1, 1907	63,384,000	3,296,000	66,680,000
November 1, 1906	69,533,000	3,459,000	72,992,000
November 1, 1905	53,745,000	4,486,000	58,231,000
November 1, 1904	41,252,000	3,874,000	45,126,000
November 1, 1903	41,769,000	3,447,000	45,216,000

Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,000
August 1	51,549,000	12,114,000	63,663,000
September 1	57,674,000	8,756,000	66,430,000
October 1	56,995,000	5,850,000	62,845,000
November 1	53,384,000	13,296,000	66,680,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000
August 1	39,518,000	3,591,000	43,109,000
September 1	42,989,000	2,565,000	45,554,000
October 1	47,518,000	17,074,000	64,592,000
November 1	49,153,000	23,839,000	72,992,000

The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same dates, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	29,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	62,3	62,7	72,1	126,0	105,8	93,0
Sept. 1	66,4	45,6	22,8	63,8	70,7	73,0	130,2	115,9	95,8
Oct. 1	62,8	64,6	38,6	71,2	83,2	80,2	134,0	147,8	118,8
Nov. 1	66,7	73,0	58,2	77,8	90,1	75,9	144,5	163,1	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

The total stock in the United States and Canada, it will be seen, is 66,700,000 bushels, as against 73,000,000 bushels a year ago; the European stock is 77,800,000 bushels, as against 90,100,000 bushels a year ago, and the world's visible is 144,500,000 bushels, as against 163,100,000 bushels on November 1, 1906.

EDITORIAL NOTES.

An important point was raised before the Supreme Court of the United States in the case of the Interstate Consolidated Railroad against the state of Massachusetts in which a decision was handed down this week. The point was whether a charter for a corporation, involving a contract based on a law enforced at the time the charter was granted though subsequently questioned, was binding, and the court, according to Washington advices, held that in such a case the charter was binding regardless of the question of the law's validity. The statute under consideration was one passed by the Massachusetts legislature requiring street railway companies to sell tickets to school children at half rates.

While there was relief, not to say gratification, in financial circles last week that no change was made in the dividend rate declared upon the shares of the Pennsylvania Railroad Company, the directors having decided to adhere to the 7 per cent. dividend basis for that stock, the accompanying statement made by President McCrea, that the management had decided upon a curtailment of expenditures, naturally produced a distinctly adverse impression. It was furthermore announced that this intention to go slow in making outlays would extend even to the construction work upon the company's New York terminals and other important improvements which are in progress on the different parts of the system. It is, of course, recognized that under existing financial conditions this action was a practical necessity, in spite of the fact that the Pennsylvania, by reason of the large loans it has secured within the past twelve months, is in much better position to pay for new construction than the generality of railroads. At the same time another reason for the course which the management has adopted may be found in the earnings of the company. For the month of September, with an increase of $1,300,000 in the gross, the net showed a falling off of $467,000, or 11 per cent. In fact, taking the first nine months of the present year, the net earnings of the Pennsylvania system have increased only $608,000, or 2 per cent., which is a disappointing showing, in view of the very large amount of capital which had been invested during the past two years in improving its facilities and adding to its equipment.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Judgment—Limitation—Minnesota Law.

The Supreme Court of Minnesota held, in the case of Gaines vs. Grunewald et al., that an action in the courts of that state upon any judgment, whether domestic or foreign, must be brought within ten years from the rendition thereof without reference to the residence of the judgment debtor during the ten years.

Accident—Railway—Negligence—Jury.

The Supreme Court of Pennsylvania held, in the case of Mosten vs. Lake Shore & Michigan Southern Railway Company, that where a person approaching a grade crossing where there were ten tracks, on a dark winter morning, when he had crossed several of the tracks was stopped by a passing freight train, which he could not see before because of the darkness, and in that position was struck by a train going at the rate of more than fifty miles an hour, the question of the railroad company's negligence was for the jury.

Insurance—Forfeiture— Husband—Action.

The New York Court of Appeals held, in the case of Kelly vs. Security Mutual Life Insurance Company, that when a mutual life insurance company declares forfeited a policy issued by it to a husband, payable on his death to his wife, the holder, denying the forfeiture, cannot maintain an action at law for breach of contract and recover as for the present value of the policy, inasmuch as there can be no breach until the time for performance, namely, on the death of the husband, and that the remedy in such a case, if sought during the lifetime of the husband, is by an action in equity to compel the company to recognize the contract as in force.

Insurance—Benefit—Conflict of Laws.

The Supreme Court of Michigan held, in the case of Dolan vs. Supreme Council of Catholic Mutual Benevolent Association, that an insurance contract with a foreign mutual benefit association was a Michigan contract and that its validity was determinable by the law of that state, where the insured was a member of a local branch of the association in that state, and the contract had to be and was countersigned by local officers, it being assumed that the certificate was delivered at the place of insured's residence within the state. The court further held that one not related to insured had no insurable interest in the life of the insured, and that his designation as beneficiary under the law of Michigan (though it would be otherwise under the law of New York) was void as against public policy.

Nuisance—Beer Depot—Indictment.

The Supreme Court of Indiana held, in the case of The Terre Haute Brewing Company vs. The State, that a "barrel house," or beer depot for the sale of beer by the keg, was not necessarily a nuisance. The court said: "The theory of the pleader appears to have been that a sale of five gallons or more of liquor by a wholesale dealer to a consumer would be a violation of the license laws of this state. This assumption is clearly erroneous. Sales of liquor in quantities of five gallons or over at a time would be lawfully made by wholesale dealers to any person, whether such person be another wholesaler, a jobber, retailer or consumer, without subjecting the seller to the provisions of our license laws. The indictment purports to charge only that purchasers were not retailers of beer, and on the theory of the draftsman would not be sufficiently comprehensive to make the sales necessarily unlawful, since they may have been made to jobbers or wholesale dealers and not to consumers."

Action—Death—Personal Representatives.

A section of the Kentucky statutes provides that the widow and minor children, or either or both of them, of a person killed by the careless, wanton or malicious use of firearms or other deadly weapon may have an action against the person committing the killing, and a later section provides that whenever the death of a person shall result from an injury inflicted by a negligent or wrongful act, damages may be recovered for such death from the person, company or corporation causing the same, and that the action shall be prosecuted by the personal representative of the deceased. The Kentucky Court of Appeals held, in the case of Howard's Adm'r vs. Hunter, that the proper construction of the first mentioned section was that if the deceased left a widow and minor children or either, then the action might be prosecuted by them, but if he was not survived by either, then his personal representatives might maintain the action. The court held further that any act that is wanton or malicious is necessarily wrongful, and that wherever death is caused by a wrongful act, however it may be committed or whatever the means or instrument used in its commission, a cause of action survives to the personal representatives of the deceased.

Cuba Held Foreign Soil.

The question was raised in the case of Galban vs. The United States, decided recently by the Supreme Court at Washington, whether duty could be properly collected in Cuban ports on articles shipped from the United States by a citizen of the latter while the island was under American control, as it was immediately following the Paris treaty of 1899. The plaintiff, who was in business in Cuba, claimed a refund of duty paid on certain merchandise on the ground that the treaty practically converted the island into American territory for the time being. The court decided against his contention.

License—Liquor—Tax—Construction.

A subdivision of the Kentucky Revenue act of 1906 provides that "before engaging in any occupation or selling any article named in this subdivision the person desiring so to do shall procure license and pay the taxes thereon." In the subdivision wholesale dealers in spirituous and malt liquors, both foreign and domestic, are named. The Kentucky Court of Appeals held (Commonwealth vs. Nunau) that a license tax was required to be paid for each agency in the state by resident brewers and also by each resident wholesale dealer in domestic beers or malted liquors. The court held further in this case that if a reason can be discovered for a particular construction of a statute, and especially of a revenue statute, which construction would deprive the treasury of revenue, such construction will be discarded in favor of one that will apply uniformly to all persons engaged in the same calling or business and so as to raise revenue.

Undisclosed Principal—Contract.

In the case of Moore vs. Vulcanite Portland Cement Company, recently decided by the Appellate Division of the New York Supreme Court for the First Department, it appeared that a party had insisted upon making a personal contract for the sale of goods with a responsible firm and had refused to deliver merchandise under the contract to a corporation which it was understood had been organized to take over the business of the firm. The court held that in this case an exception was presented to the general rule that an undisclosed principal can enforce a contract made by its agent for its benefit, as under the circumstances it was clearly manifest that an exclusive credit was given to the persons with whom it was intended to contract. The court said: "The proposition is that a party to a contract is entitled to insist that the parties with whom he contracted are the real parties who will perform and enforce the contract, and he is not bound to recognize either an actual assignment of the contract or, what is its equivalent, an enforcement of the contract by an undisclosed principal upon the ground that the contract was really made for his benefit.

Insurance—Beneficiary—Interest—Change.

The New York Court of Appeals held, in the case of Stronge vs. The Supreme Lodge, Knights of Pythias, that a member of a mutual benefit association who for a valuable consideration had designated the person to whom his insurance should be paid was precluded from thereafter changing the designation without the consent of the beneficiary, and that this was so notwithstanding the by-laws of the association and the certificate provided that a member might change the designation of his beneficiary as often as he desired, and without his consent, and that such provision was to be construed as relating to cases where there was no consideration for the designation first made. The court said: "We do not regard the by-laws and provisions of the certificate or authorities called to our attention providing for and upholding the right of a member to change the designation of his beneficiary as often as desired without the consent of the latter, as at all applicable to such a case as this. They relate to a case where, voluntarily and gratuitously, designation has been made of a beneficiary who in the language of the certificate has acquired 'no interest whatever in the certificate nor in the indemnity fund.'"

BUSINESS NOTES.

Centennial of Anthracite.

The one hundredth anniversary of the first burning of anthracite coal in a grate will be celebrated in Wilkes-Barre, Pa., on February 11 of next year. Coal was first burned by Judge Jesse Fell, of Wilkes-Barre, in a grate at the old Fell tavern on the night of February 11, 1807. Up to that time the coal, called generally stone coal, owing to its hardness, had no commercial value. People of those times said it would not burn sufficiently to make it of any service, but Judge Fell believed it would. He built a simple grate of iron bars and in the presence of some of the most prominent men in the city made the experiment. It was a bitterly cold winter night, with a high wind blowing, and there was a fine draught up the big chimney. It was not long before the coal glowed and gave forth a comfortable heat. News of the experiment spread quickly, people built grates in their homes and dug in the outcroppings for the new fuel, and in a very short time the commercial value of it was recognized and it began to be an article of trade.

Crops for the Arid Southwest.

The Baltimore *American* quotes Dr. Karl von Holburg, of Berlin, a distinguished scientist who has made a special study of the products of countries where the rainfall is scant, as saying that "the people who live in the semi-arid regions of Texas, New Mexico and Arizona should be making millions of dollars every year out of growing dry land olives, figs and dates. Parts of Texas," says Dr. von Holburg, "now worthless and deemed only a barren waste, could be made to yield handsome profits if the rocky soil were planted in the chemlali or dry land olive that flourishes in northern Africa, and out of which the choicest olive oil is made. The United States is a heavy consumer of olive oil and imports its entire supply, which could just as well be produced at home. In fact, southwest Texas alone could be made to furnish the domestic demand. The same thing holds good as to dates and figs." While in the west Dr. von Holburg visited the government station in the Colorado desert, adjacent to the Salton sea, where the United States Department of Agriculture has established a farm on which there are grown the finest Arabian dates and figs.

The Automobile.

According to the *Outing Magazine*, "the manufacture of automobiles first began to assume the proportion of being one of the country's greatest industries in 1902. Figures compiled showing the great progress since that time make clear what a great place it has taken in America's industrial life. Twenty-one concerns now in operation were doing business in 1902; fifty-two concerns were in the business that year, eighteen of which discontinued before 1903. In 1903 there were seventy-one new concerns in the business and thirty discontinued the same year. There were 106 in all doing business in that year. In 1904 there were fifty-four new concerns in the business and forty discontinued the same year. There were 106 in all doing business in that year. In 1905 there were fifty-one new concerns in the business and thirty-eight discontinued the same year. There were 141 in all doing business in that year. In 1906 there were forty-three new concerns in the business and twenty-nine discontinued the same year. There were 146 in all doing business in that year. In 1907 there were fifty-one new concerns in the business and about 168 concerns in all. There have been several discontinuances. The following table illustrates the growth of the output of the American automobile industry since 1903 by the cost of the cars which were manufactured during those years:

In 1903 the output cost	$16,000,000
In 1904	24,500,000
In 1905	40,000,000
In 1906	65,000,000
In 1907	89,000,000

More National Banks.

The Comptroller of the Currency reports that thirty-eight national banks, with aggregate capital of $1,920,000, were chartered in October, of which four were conversions of state banks, seven reorganizations of state or private banks, and twenty-seven associations of primary organizations. Of the total number chartered, twenty-six, with capital of $690,000, were associations with individual capital of less than $50,000, the average being approximately $25,000, and twelve with total capital of $1,230,000, the individual capital being $50,000 or over. Under the act of March 14, 1900, and from that date to October 31, 2,389 associations have been chartered, with total capital of $62,312,500. In the same period, but under the act of 1864, charters were granted to 1,284 banks, with capital of $153,117,800. This shows the total number of banks chartered since March 14, 1900, as being 3,673, with capital of $215,430,300. The addition to the number of national banks was greater than the number of associations in active operation on March 13, 1900, there being at that time 3,617 associations, with capital of $616,308,095, and circulation outstanding to the amount of $254,402,730. At the close of last month there were in operation 6,500 associations, with capital of $909,274,775, and circulation outstanding to the amount of $609,980,466. The net increase in number of banks, capital and circulation during the year was as follows: Number of banks, 425; capital stock, $63,335,000; circulation outstanding, $26,808,481.

Census of Argentina.

Mr. A. M. Beaupré, American minister at Buenos Aires, reports that the Ministry of the Interior has issued a bulletin relating to the population of the Argentine Republic, from which he takes the information given below. The total population and the yearly increase per 1,000 inhabitants for a number of years is shown by the following table:

	Increase	*Population Dec. 31*	*Inc. per 1,000*
1895	124,883	4,079,794	31.5
1896	174,636	4,254,430	42.8
1897	132,334	4,386,764	31.1
1898	123,027	4,509,791	28.0
1899	146,769	4,656,560	32.9
1900	137,689	4,794,149	29.6
1901	132,764	4,926,913	27.7
1902	95,335	5,022,248	19.4
1903	138,738	5,160,986	27.6
1904	249,042	5,410,028	48.2
1905	268,169	5,678,197	29.6
1906	296,574	5,974,771	52.2

Of the total population of 5,974,771, there are 1,510,920 foreigners, classified as follows: Italians, 795,916; Spanish, 342,422; French, 99,740; English, 22,399; Austrian, 24,039; Swiss, 14,527; German, 21,215; Belgian, 5,634; Russian, 37,773; other nationalities, 147,354. The number of foreigners from neighboring republics is estimated as follows: Bolivians, 10,000; Brazilians, 25,000; Chileans, 30,000; Uruguayans, 73,000, and Paraguayans, 20,000. The number of Italians in the Argentine Republic, as given by the Italian representatives in Buenos Aires, is 1,250,000; but it is probable that many thus enumerated were born in the country, if the figures given in the foregoing official estimates are correct.

Reclamation Projects.

On the coast of Holland the Zuyder Zee forms a huge pocket with a contracted, though not narrow, mouth. The *Technical World Magazine* for November describes the project for cutting down the area of the Zee by converting 1,400 square miles of it into "new farms and homes for 50,000." The enterpise is one of considerable proportions, and its cost will be a little more than $75,000,000. A dam or embankment is to be built outside the neck of the pocket, from the Noord Holland shore to the Friesland shore, with sluices for outflow of the waters of the Yssel and other streams, but with no entrance for tidewater. Dikes will then be built for the inclosure of four different areas. As these are completed the basins thus formed will be pumped dry and the land exposed will be occupied and cultivated. The plan has been under consideration for nearly sixty years, but when it was first broached, in 1849, engineers declared its execution impossible. It is estimated that the lands to be reclaimed will yield to the government an annual income of at least $5,000,000 in rentals. Thirty-three years is the time estimated as necessary for the completion of the work. "Beside our area of land already reclaimed, in process of reclamation and susceptible of reclamation, this Dutch project for the making of 1,400 square miles of new land is not imposing," says the New York *Sun*. "The possibilities in this country may be divided into three classes: Irrigation of arid areas should give us 80,000 square miles; drainage of swamp lands should give us as much more; dikes which will be needed when our rivers are converted into commercial highways will add their thousands of square miles. Some day all this will be done. When it is done there will have been added to the habitable area of the country an expanse equal to that of the German empire and about fifteen times that of the whole of Holland, including her salvage from the Zuyder Zee."

CURRENT BUSINESS NEWS.

Commercial.

Consul-General W. H. Michael makes the following report from Calcutta on the high prices of foodstuffs in India: "In the middle of July rice in Bengal was 58 per cent. dearer than what is considered the normal price, wheat 26 per cent. dearer, and maize 70 per cent. above normal. The public discussion of the situation has brought out a report of the Director of Agriculture which affirms that prices of food grains all over India have advanced rapidly and unprecedentedly. Especially have prices risen rapidly and sharply in eastern Bengal."

Reporting upon the industrial conditions existing in Russia, with especial reference to stock raising and agricultural products, Consul T. E. Heenan, of Odessa, writes as follows: "The fiscal years 1906 and 1907 were particularly conspicuous for a marked advance in the price of all animal products, particularly butter and meat. The principal cause of this was the ruin during the peasants' riots of many of the large estates, which were the main sources of cattle growing for market. The neat cattle, sheep, etc., in most of the wrecked estates were slaughtered, and much of this meat was wasted, in many instances being left to be devoured by dogs."

The N. K. Fairbank Company estimates stocks of lard held in the United States, Europe and afloat therefor as follows: November 1, 1907, 198,439 tierces; October 1, 1907, 288,711; November 1, 1906, 186,182; November 1, 1905, 243,262; November 1, 1904, 199,914; November 1, 1903, 164,049.

It is reported that the Society of Equity, at Indianapolis, members of which have been holding back a large amount of tobacco, has sold to the Imperial Tobacco Company of Great Britain 16,000,000 pounds, the consideration being $1,500,000.

Broomhall reports that famine conditions have been declared in the United Provinces of India and that crops are regarded as being as bad as in the famine year of 1896, when the total crop was 184,000,000 bushels of wheat. Last year it was 280,000,000 bushels, and the preceding year 360,000,000 bushels. The official report for India states that crop prospects are the worst in the United Provinces, the Punjab and northwest frontier provinces where unirrigated crops must fail. In central India, some of Bombay districts, and a large area of central provinces the outlook is becoming increasingly serious.

Oranges and lemons of southern California for the year past brought $34,000,000. Of this amount $11,000,000 went to the railway companies for shipping and the remaining $23,000,000 to the growers.

Broomhall's weekly crop summary says; "United Kingdom, France and Italy—Weather unseasonably wet; seeding progressing slowly. Germany and Spain—Seeding well advanced with favorable weather. Austro-Hungary—Weather very unfavorable, being cold and dry. Roumania—General rains fallen; increased exports expected. Russia—Rains have fallen in south and southwest; reseeding expected; supplies very light. The north is importing small lots. North Africa—Good rains have fallen."

From January 1 to October 31 total automobile importations aggregated $4,064,249, compared with $4,605,315 same period last year and $3,467,404 same period in 1905.

The October statement of the British Board of Trade shows increases of £3,025,000 in imports and £5,085,000 in exports. The principal increase in imports was £3,000,000 in grain and flour; increases in exports were coal, £1,000,000, and manufactured goods, £3,750,000, of which £1,000,000 were cotton fabrics. From these returns, imported goods reëxported being omitted, the following comparative table of the United Kingdom's October trade in merchandise may be compiled:

	1907	1906	1905
Imports	£57,664,318	£54,639,318	£48,696,418
Exports	38,319,331	33,334,331	29,367,556
Excess imports	19,344,987	21,404,987	19,328,862

Excess of imports in October, 1904, were £23,074,128; in 1903, £21,897,008, and in 1902, £21,719,499.

The *American Agriculturist* estimates this year's apple crop at 24,000,000 barrels. This total materially is short of last year. What is of greatest importance is the shortage in such commercial orchard sections as western New York, nearly all of Michigan and the entire southwest. In a general way the shortage is more pronounced there than anywhere else. The crop was an absolute failure in Kansas, Missouri and Nebraska. New England has rather more apples than last year, due solely to the fact that Maine finally brought to maturity a good crop.

The following statistics of cotton movement, in bales, for two months of the present season show the extent to which the movement this year has fallen behind last year:

	1907	1906
Receipts at ports to November 1	1,866,972	2,529,396
Net shipments overland same time	64,521	92,521
Southern mill takings, net	470,000	471,000
Interior stocks in excess of September 1	288,141	242,554
In sight November 1	2,689,634	3,335,471

Financial.

An advance in the official rate of the Bank of France to 4 per cent. took place Thursday, this being the first change since March 21 last, when the rate was advanced to 3½ from 3 per cent., which had obtained since May, 1900. The present rate, the highest since the close of 1899, compares as follows with the rate at this date in recent years:

	Per cent.		Per cent.
1907	4	1900	3
1906	3	1899	3
1905	3	1898	3
1904	3	1897	2
1903	3	1896	2
1902	3	1895	2
1901	3	1894	2½

The 4 per cent. rate for the Bank of France has been exceeded but once in the past twenty years, 4½ per cent. having obtained for three weeks after December 21, 1899. On only two occasions in this period has 4 per cent. been equaled, and only once in recent history has the French bank rate touched 5 per cent. That was at the close of 1881. The Bank of France has the record of changing its rate less often than any other bank in Europe.

The Bank of Belgium on Thursday advanced its official discount rate from 5½ to 6 per cent. Last Thursday the rate was advanced to 5½ from 5, which had been maintained since March 21, when it succeeded 4.

The rate of discount of the Bank of Bengal at Calcutta was raised Thursday from 5 to 6 per cent. The Bank of Bombay, following this action, advanced its rate from 4 to 5.

Gold production of the Transvaal in October is estimated at 550,000 ounces fine, against 538,000 officially announced for September. Value of the October output compares as follows with preceding months and years:

October, 1907	$11,687,000	October, 1906	$11,480,000
September, 1907	11,422,000	October, 1905	8,825,000
August, 1907	11,783,000	October, 1904	6,915,000
July, 1907	11,314,000	October, 1903	6,043,000
June, 1907	10,779,000	October, 1902	3,853,000

Sales on the Boston Stock Exchange in October compare:

	1907	1906	Decrease
Shares—October	1,256,327	2,135,533	879,206
Ten months	13,221,534	14,619,448	1,397,914
Bonds—October	$1,119,000	$862,500	* $256,500
Ten months	6,053,550	7,053,110	999,560

* Increase.

Sales on the Philadelphia Stock Exchange in October compare:

	1907	1906	Decrease
Shares—October	829,958	940,463	110,505
Ten months	7,590,891	9,269,988	1,679,097
Bonds—October	$1,435,925	$2,107,028	$671,103
Ten months	10,924,861	18,043,403	7,118,542

The Savannah Clearing Association has decided to issue Clearing House certificates. This is the first time in the history of Savannah that this has been done.

A million dollars in gold from Mexico for New York passed through El Paso, Texas. It is said to be part of the money needed to complete the merger of the Mexican Central with other Mexican railroads.

The returns from the New York state stock transfer tax law during the month of October amounted to $371,220, a gain of $108,918, or 41 per cent, as compared with September, and a loss of $246,246 from October, 1906, or 40 per cent. The amount received for the first ten months of the year is $3,385,582, as compared with $5,444,400 for the corresponding period of 1906, a decrease of $2,058,818, or 37 per cent. The following table shows the monthly returns since the inception of the law:

	1907	1906	1905
January	$569,478	$911,321	....
February	309,048	490,498	....
March	683,271	427,498	....
April	307,105	560,300	....
May	318,194	503,571	....
June	195,740	424,071	$446,301
July	274,754	106,946	308,790
August	339,224	795,000	477,784
September	262,302	668,629	372,501
October	371,220	617,466	405,784
November	....	539,720	607,152
December	....	516,534	728,409
Total	3,385,582	6,500,654	3,346,721
Monthly averages	338,558	571,721	478,146

The New York Stock Exchange announces that the following securities have been stricken from the list: Chicago & Northwestern Railway Company, Winona & St. Peters 7 per cent. bonds, due 1907; City of New York additional water stock 3 per cent., due 1907; consolidated stock of Harlem River Bridge Company, 3 per cent, due 1907.

This table gives the discount rates of the Bank of England at different dates during past years:

	P. ct.		P. ct.
June 18, 1903	3	September 13, 1906	4
September 3, 1903	4	October 11, 1906	5
April 14, 1904	3½	October 19, 1906	6
April 21, 1904	3	January 17, 1907	5
March 9, 1905	2½	April 11, 1907	4½
September 7, 1905	3	April 25, 1907	4
September 28, 1905	4	August 15, 1907	4½
April 5, 1906	3½	October 31, 1907	5½
May 3, 1906	4	November 4, 1907	6
June 21, 1906	3½	November 7, 1907	7

The rate—7 per cent—established Thursday is the highest in thirty-four years. On October 18, 1873, it was advanced from 6 to 7 per cent.; two weeks later, November 1, this was succeeded by 8, and on November 7—thirty-four years ago Thursday—9 per cent. was established. This extreme rate was necessary for only two weeks, however, and by the close of 1873 the rate was down to 4½ per cent. In the Overend-Gurney panic of 1866 the English bank rate for fourteen weeks was 10 per cent. It has never been higher. The present rate compares as follows with that of the corresponding date in previous years:

	P. ct.		P. ct.
1906	6	1897	3
1905	4	1896	4
1904	3	1895	2
1903	4	1894	2
1902	4	1893	3
1901	4	1892	3
1900	4	1891	4

The engagement of gold thus far made known up to November 8 is in detail as follows:

National City Bank, New York	$9,250,000
Heidelbach, Ickelheimer & Co	5,000,000
Lazard Freres	6,250,000
Kuhn, Loeb & Co	2,500,000
Chase National Bank, New York	2,000,000
Hanover National Bank, New York	1,000,000
Bank of Montreal	1,500,000
National Bank of Commerce, New York	500,000
Guaranty Trust Company, New York	500,000
Seaboard National Bank, New York	350,000
N. W. Harris & Co	150,000
Russo-Chinese Bank	100,000
First National Bank, Chicago	3,750,000
Illinois Trust Company, Chicago	1,500,000
Goldman, Sachs & Co	1,625,000
Portland, Ore., banks	1,750,000
Second National Bank, Boston	700,000
National Bank of Republic, Chicago	500,000
Commercial National Bank, Chicago	500,000
First National Bank, Pittsburgh	500,000
Geo H. McFadden & Bro., Boston	500,000
Philadelphia Bank	500,000
Royal Insurance Company, Chicago	750,000
Bank of Nova Scotia	750,000
Total	42,425,000

The American Cotton Oil Company, at a meeting Thursday, decided to pass the regular annual dividend on the common stock, prevailing financial conditions being given as the cause. However, the net earnings of the company were equivalent to a dividend on its common shares of 8 per cent., or of 6½ per cent. after a deduction of over $400,000 as an extraordinary improvement fund. The last dividend on this stock was declared in December, 1906, and was 2 per cent. The regular semi-annual dividend of 3 per cent. on the preferred stock was declared.

A seat on the New York Stock Exchange was sold Thursday for $60,000, the lowest price recorded since 1904, when a seat brought $57,000. The highest price for a seat was recorded early in 1906 and late in 1905, when for the two seats $95,000 each was received. The lowest price in 1905 was $70,000. The last sale prior to that of Thursday was made at $65,000.

On Wednesday The American Tobacco Company, which has for a long time been declaring a regular quarterly dividend of 2½ per cent. and an extra dividend of from 5 to 7½ per cent. on its common stock, the last named amount having been paid three months ago, reduced this extra dividend to 2½ per cent. This was declared along with the regular dividend of the same amount.

On Thursday the governing committee of the New York Stock Exchange authorized to be added to the list the $30,000,000 additional ten-sixty year 5 per cent. sinking fund bonds of the United States Steel Corporation, due in 1963. This action was taken in connection with the transfer of the stock of the Tennessee Coal & Iron Company to the United States Steel Corporation. The transfer has been formally closed. The stock is to be deposited at the office of J. P. Morgan, and the new sinking fund bonds of United States Steel will be delivered to the Tennessee stockholders.

Industrial.

Grand Forks, B. C., miners and smelter employees of the Granby Smelter Company have had their wages cut 50 cents a day, beginning November 1. This will affect all the miners in the Phoenix camp, as the British Columbia Copper Company and the Dominion Copper Company will make similar reduction.

Production of anthracite coal in the United States last month was the largest in the history of the trade, shipments exceeding May, 1905, which was the previous monthly record, by 10,693 tons. The tonnage movement in October compared as follows:

	1907	1906	Inc.
Reading	1,350,493	1,158,914	191,579
Lehigh Valley	1,076,865	983,609	93,256
Jersey Central	739,578	683,640	55,938
Lackawanna	906,593	831,519	75,074
Delaware & Hudson	595,955	437,423	158,532
Pennsylvania	490,236	464,415	25,821
Erie	620,766	593,116	27,650
Ontario & Western	235,365	232,132	3,233
Total	6,015,851	5,384,768	631,083

For the year to date (10 months) the movement compares as follows: 1907, 55,661,467 tons; 1906, 45,680,414; increase, 9,981,053.

It is reported that the Chicago, Milwaukee & St. Paul Railway Company has discharged 1,300 shopmen from various shops of the system.

Our correspondent at Cincinnati reports that restricted bank accommodation is given by a number of industries as the reason for discharging about 3,000 men last week.

Excavation on the Panama canal in October amounted to 1,844,471 cubic yards, against 1,481,307 in September.

It is announced that the pay of every employee of the New York Air Brake Company at Watertown, N. Y., from president down, has been reduced 10 per cent. The cut will affect 2,270 men and reduce the pay roll nearly $3,000 a week.

The telegraphers' strike, which was inaugurated August 12, was declared off Thursday, and immediately a rush of operators to get back their old positions ensued, but the majority were informed that they would have to take their turn on the regular waiting list.

Railroads.

Shipments of bituminous coal and coke over various railroads in western Pennsylvania and West Virginia for the eight months ended August 31 are reported as follows, in short tons:

	Coal	Coke	Total
Baltimore & Ohio	17,451,173	3,851,858	21,303,031
Buffalo, Roch. & Pitts.	4,707,362	418,692	5,126,054
Penn. lines, N. Y. Cent.	5,465,229	53,787	5,519,016
Pittsburgh & Lake Erie	7,205,062	3,569,925	10,774,987
Norfolk & Western	8,040,621	1,728,667	9,769,288
Total	42,869,447	9,622,929	52,492,376
Total, 1906	38,938,838	8,859,881	47,798,719

The total increase this year was 4,693,657 tons, or 9.8 per cent. In addition to the tonnage given above, the Baltimore & Ohio carried 572,481 tons of anthracite in 1906 and 643,638 tons in 1907, an increase this year of 71,157 tons.

The coal tonnage over the roads in the Ohio Coal Traffic Association for the eight months ended August 31 was as follows, in short tons:

	1906	1907	Increase
Hocking Valley	2,497,612	2,569,057	71,445
Toledo & Ohio Central	1,093,878	1,178,522	84,644
Baltimore & Ohio	1,127,305	1,486,006	358,701
Wheeling & Lake Erie	1,329,847	2,290,975	961,128
Cleve., Lorain & Wheeling	1,284,078	1,914,995	630,917
Zanesville & Western	717,706	1,071,431	353,725
Toledo Division, Penn. Co.	1,461,887	1,563,345	101,458
Lake Erie, Alliance & Wh.	403,547	810,544	406,997
Marietta, Columbus & Cleve.	5,785	18,626	12,841
Total	9,921,645	12,903,501	2,981,856

The total shows an increase this year of 30.1 per cent.

Largely increased business but considerable loss in revenue is shown by an investigation made by George J. Charlton, general passenger agent of the Chicago & Alton, into the effect of the new railroad rate law for four months. A comparison with the receipts for the same months of last year shows a loss of over $100,000 on the Alton. "The increased number of passengers for the long haul has been substantial," said Mr. Charlton. "But there has been a net loss of ½ cent a mile on every ticket, for under the 3-cent fare the long haul averaged about 2½ cents a mile. On short-haul tickets there have been large sales, but here the road has lost one-third of what would have been made under the 3-cent fare."

The New York Central has increased its motive power 81 per cent. within the past few years and increased its freight equipment 67 per cent., at a total expenditure of more than $140,000,000.

Wm. A. Read & Co.
